REGULATIONS GOVERNING THE DEGREE OF BACHELOR OF ENGINEERING/ TECHNOLOGY (B.E/B.Tech) UNDER CHOICE BASED CREDIT SYSTEM (CBCS) Effective from the academic year 2017–18

#### DEFINITIONS OF KEYWORDS

The following are the definitions/descriptions that have been followed for the different terms used in the Regulations of B.E/B.Tech. Programmes:

- Programme: Is an educational programme in a particular stream/ branch of Engineering/branch of specialization leading to award of Degree. It involves events/activities, comprising of lectures/ tutorials/ laboratory work/ field work, outreach activities/ project work/ vocational training/ viva/ seminars/ Internship/ assignments/ presentations/ self-study etc., or a combination of some of these.
- Branch: Means Specialization or discipline of B.E/B.Tech. Degree Programme, like Civil Engineering, Mechanical Engineering, Textile Engineering, etc.
- 3) Semester: Refers to one of the two sessions of an academic year (vide: serial number 4), each session being of sixteen weeks duration (with working days greater than or equal to ninety). The odd semester may be scheduled from August and even semester from February of the year.
- 4) Academic Year: Refers to the sessions of two consecutive semesters (odd followed by an even) including periods of vacation.
- 5) Course: Refers to usually referred to as 'papers' and is a component of a programme. All Courses need not carry the same weight. The Courses should define learning objectives and learning outcomes. A Course may be designed to comprise lectures/ tutorials/ laboratory work/ field work/ outreach activities/project work/ vocational training/ viva/ seminars/ term papers/assignments/ presentations/ self-study etc., or a combination of some of these.
- 6) Credit: Refers to a unit by which the Course work is measured. It determines the number of hours of instructions required per week. One credit is equivalent to one hour of lecture or two hours of laboratory/practical Courses/ tutorials/ fieldwork per week etc.
- Audit Courses: Means Knowledge/ Skill enhancing Courses without the benefit of a grade or credit for a Course.
- Choice Based Credit System (CBCS): Refers to customizing the Course work, through Core, Elective and soft skill Courses, to provide necessary support for the students to achieve their goals.
- 9) Course Registration: Refers to formal registration for the Courses of a semester (Credits) by every student under the supervision of a Faculty Advisor (also called Mentor, Counselor etc.,) in each Semester for the Institution to maintain proper record.
- 10) Course Evaluation: Means Continuous Internal Evaluation (CIE) and Semester End Examinations (SEE) to constitute the major evaluations prescribed for each Course. SEE and CIE to carry 60% and 40% respectively, to enable each Course to be evaluated for 100 marks, irrespective of its Credits.
- 11) Continuous Internal Evaluation (CIE): Refers to evaluation of students' achievement in the learning process. CIE shall be by the Course Instructor and includes tests, homework, problem solving, group discussion, quiz, mini-project and seminar throughout the Semester, with weightage for the different components being fixed at the University level.

#### REGULATIONS GOVERNING

#### THE DEGREE OF BACHELOR OF ENGINEERING/ TECHNOLOGY (B.E/B.Tech) UNDER CHOICE BASED CREDIT SYSTEM (CBCS) Effective from the academic year 2017–18

- 12) Semester end examinations (SEE):Refers to examination conducted at the University level covering the entire Course Syllabus. For this purpose, Syllabi to be modularized and SEE questions to be set from each module, with a choice confined to the concerned module only. SEE is also termed as University examination.
- 13) First Attempt: Refers to a student who has completed all formalities and has become eligible to attend the SEE and has attended at least one head of passing, such attempt shall be considered as first attempt.
- 14) Credit Based System (CBS): Refers to quantification of Course work, after a student completes teaching learning process, followed by passing in both CIE and SEE. Under CBS, the requirement for awarding degree is prescribed in terms of total number of credits to be earned by the students.
- 15) Credit Representation: Refers to Credit Values for different academic activities considered, as per the Table.1. Credits for seminar, project phases, project viva-voce and internship shall be as specified in the Scheme of Teaching and Examination (Annexure -1).

|  | Table 1:                               | Credit Values                                     |                    |                  |
|--|--|---|--------------------|------------------|
| Theory/Lectures (L)<br>(hours/week/Semester) | Tutorials (T)<br>(hours/week/Semester) | Laboratory/Practical (P)<br>(hours/week/Semester) | Credits<br>(L:T:P) | Total<br>Credits |
| 4  | 0                                      | 0   | 4:0:0              | 4                |
| 3  | 0                                      | 0   | 3:0:0              | 3                |
| 2  | 2                                      | 0   | 2:1:0              | 3                |
| 2  | 0                                      | 2   | 2:0:1              | 3                |
| 2  | 2                                      | 2   | 2:1:1              | 4                |
| 0  | 0                                      | 6   | 0:0:3              | 3                |

NOTE: Activities like, practical training, study tour and participation in Guest lectures not to carry Credits.

- 16) Letter Grade: It is an index of the performance of students in a said Course. Grades are denoted by letters S, A, B, C, D, E and F.
- 17) Grading: Grade refers to qualitative measure of achievement of a student in each Course, based on the percentage of marks secured in (CIE plus SEE). Grading is done by Absolute Grading (Refer 17036.0). The rubric attached to letter grades are as follows:

S -- Outstanding, A - Excellent, B - Very Good, C - Good, D - Above Average, B - Average and F - Fail.

 Grade Point (GP): Refers to a numerical weightage allotted to each letter grade on a 10-point scale as under.

| Letter Grade and corresponding Grade Points on a typical 10 - Point scale |    |    |    |    |    |    |    |  |  |
|---|----|----|----|----|----|----|----|--|--|
| Letter Grade  | S  | A  | B  | C  | D  | E  | F  |  |  |
| Grade Point   | 10 | 09 | 08 | 07 | 06 | 04 | 00 |  |  |

- Passing Standards: Refers to passing a Course only when getting GP greater than or equal to 04 (as per serial number 18).
- [29] Credit Pointe To the product of grade point (CP and amplet all vieths for a Course new Credit Point (CrP) = GP > Credits for the Course

#### REGULATIONS GOVERNING THE DEGREE OF BACHELOR OF ENGINEERING/ TECHNOLOGY (B.E/B.Tech) UNDER CHOICE BASED CREDIT SYSTEM (CBCS) Effective from the academic year 2017–18

- 21) Semester Grade Point Average (SGPA): Refers to a measure of academic performance of student/s in a semester. It is the ratio of total credit points secured by a student in various Courses of a semester and the total Course credits taken during that semester. [Refer: 170B6.0]
- 22) Cumulative Grade Point Average (CGPA): Is a measure of overall cumulative performance of a student over all semesters. The CGPA is the ratio of total credit points earned by a student in various Courses in all semesters and the sum of the total credits of all Courses in all the semesters. It is expressed up to two decimal places. [Refer: 170B6.0]
- 23) Transcript or Grade Card or Certificate: Refers to a certificate showing the grades earned by a student. A grade certificate shall be issued to all the registered students after every semester. The grade certificate will display the programme details (Course code, title, number of credits, grades secured) along with SGPA of that semester and CGPA earned till that semester.
- 24) University: Visvesvaraya Technological University (VTU), Belagavi.

#### REGULATIONS GOVERNING THE DEGREE OF BACHELOR OF ENGINEERING/ TECHNOLOGY (B.E/B.Tech) UNDER CHOICE BASED CREDIT SYSTEM (CBCS) Effective from the academic year 2017-18

Athen the

| 17OB 1.0  | Title, Duration and Credits of the Programme of Study   |
|-----------|---|
| 17OB 1.1  | The programme of study shall be called the degree of Bachelor of Engineering (Subjec<br>of Specialization) /Bachelor of Technology (Subject of Specialization), abbreviated a<br>B.E. / B.Tech. (Subject of Specialization).  |
| 17 OB1.2  | The program to which students are admitted to I semester of the programme shall be o<br>four academic year duration divided into eight semesters and each semester is of 16<br>weeks duration.<br>The programme to which students are admitted to III semester of the programme under<br>lateral entry shall be of three academic year duration divided into six semesters and<br>each semester is of 16 weeks duration.<br>The programme (conducted during evening) to which students are admitted to III<br>semester of the programme under lateral entry shall be of three academic year duration<br>divided into six semesters and each semester is of 16 weeks duration. The deficit<br>contact hours of the programme, conducted during evening on all working days, shall be<br>compensated on all Sundays (except on general holidays).   |
| 17 OB 1.3 | The calendar of events in respect of the program of study shall be notified by the University in advance.   |
| 17 OB 1.4 | The University examination in all programs of study shall be conducted at the end of each semester for all the eight semesters.   |
| 17 OB 1.5 | <ul> <li>Maximum Duration for Programme Completion : <ul> <li>a)</li> <li>i. Students admitted to I year B.E/ B.Tech shall complete the programme within a period of eight academic years from the date of first admission, failing which they have to discontinue the Course.</li> <li>ii. Students admitted II Year B.E/B.Tech. under lateral entry scheme shall complete the Programme within a period of six academic years from the date of first admission, failing which he/she has to discontinue the Course.</li> </ul> </li> <li>b) <ul> <li>i. A student who has not obtained the eligibility for III semester even after three academic years from the date of admission to I semester shall discontinue the Programme or get readmitted to I semester of first year B.E./B.Tech. with a new University Seat Number but retaining the same year of admission.</li> <li>ii. A student (under lateral entry scheme) who has not obtained the eligibility for V semester even after three academic years from the date of admission to III semester shall discontinue the Programme or get readmitted to III semester of II year B.E./B.Tech. with a new University Seat Number but retaining the same year of admission.</li> </ul> </li> </ul> |
| 7 OB 1.6  | Prescribed Number of Credits for the Programme:<br>(a) The number of credits to be completed by students admitted to I semester of<br>B.E./B.Tech. programme shall be 200<br>(b) The number of credits to be completed by students admitted to III semester of  |
|           | B.E./B.Tech. programme under lateral entry scheme shall be 152  |

| 17 OB2.0 | Eligibility for Admission(As per the Government orders issued from time to time)  |  |  |  |  |  |  |
|----------|---|--|--|--|--|--|--|
| 17 OB2.1 | Admission to I year/ I semester Bachelor Degree in Engineering/ shall be open to the students who have passed the II PUC/ XII Standard/ Equivalent Examination with English as one of the Languages and obtained a Minimum of 45% of Marks in aggregate a Physics and Mathematics along with Chemistry / Bio-Technology / Biology / Electronics Computer.<br>in case of SC/ST, Category -1 and OBC (2A, 2B, 3A and 3B) category students from Karnataka (Karnataka candidates) the minimum marks for eligibility shall be 40 %.<br>With regard to the qualification earned from foreign countries, Equivalence certificate from the Association of Indian Universities is Mandatory for admission to B.E./B.Tech. programme. In case of any dispute about the equivalence in qualification earned from foreign countries, the decision of the Equivalence committee shall be the final in establishing the eligibility of the student.<br>Admission to II year/III semester Bachelor Degree in Engineering/ Technology (Lateral |  |  |  |  |  |  |
| 17 OB2.2 | <ul> <li>Entry) shall be open to the Diploma holders and B.Sc. graduates.</li> <li>(i) Diploma Holders <ul> <li>(a) Must have passed diploma or equivalent examination as recognized by</li> <li>(b) mode in the passed diploma or equivalent examination as recognized by</li> </ul> </li> </ul>   |  |  |  |  |  |  |
|          | <ul> <li>University and secured not less than forty five percentage (45%) marks in the final year examination (fifth and sixth semesters) in the appropriate branch of engineering. In case of SC/ST and OBC students from Karnataka the minimum marks for eligibility shall be forty percent (40%).</li> <li>(b) Those candidates who have completed Diploma from other than Karnataka state shall provide the Equivalence/ Eligibility Certificate from the Director of Technical Education, Karnataka.</li> </ul>  |  |  |  |  |  |  |
|          | (ii) B.Sc. Graduates<br>Must have passed B.Sc. degree from a recognized University under the UGC<br>or equivalent qualification as recognized by University and secured not less<br>than forty five percentage (45%) marks in aggregate (considering the marks of<br>all six semesters). In case of SC/ST and OBC students from Karnataka<br>(Karnataka candidates) the minimum marks for eligibility shall be forty<br>percent (40%). Candidates must have studied Mathematics as subject of study<br>at XII Standard.   |  |  |  |  |  |  |
|          | <ul> <li>(i) Diploma Holders for the programme conducted during evening</li> <li>A candidate who has passed diploma examination or equivalent examination and obtained an aggregate minimum of 45 % marks taken together in all the subjects of the final year (fifth and sixth semesters) diploma examination is eligible to B.E Courses, and 40 % of marks in case of SC/ST and backward classes of the conducted and the subjects.</li> </ul>  |  |  |  |  |  |  |
|          | Karnataka candidates.<br>In addition to this a candidate after passing the diploma, must have minimum of<br>two years full time professional experience as on first September of the year of<br>admission, in a registered firm/company/industry/ educational / Government<br>Autonomous organizations in the branch of Engineering/ Technology, in which<br>the candidates hold a diploma, and in which admission is sought by him/her.  |  |  |  |  |  |  |

| 17 OB2.2<br>(continued) | Further that employment shall be in an establishment situated within the 15 km from the place of the institution to which the candidate is seeking admission.   |
|-------------------------|---|
|                         | Professional experience refers to the experience carned as an employee or<br>regular basis in.  |
|                         | <ul> <li>Government Government indertaking Putton Sector Undertaking<br/>Corporation of.</li> </ul>   |
|                         | <ul> <li>(b) In a private company registered under the Directorate of industries and<br/>Commerce or the Directorate of Small Scale Industries or,</li> <li>(c) Commerce of Small Scale Industries or,</li> </ul>   |
|                         | <ul> <li>(c) Government, Government recognized institutions as technical staff.</li> <li>Provided that the period of apprenticeship undergone shall also be treated as professional experience, if sponsored by the Board of Apprenticeship Training Southern Region, Chennai or by Government, Government undertakings and Public Sector undertakings.</li> <li>Further, those candidates who have completed Diploma from other thar Karmataka state shall provide the Equivalence/ Eligibility Certificate from the</li> </ul>  |
|                         | Director of Technical Education, Karnataka.   |
| 17 OB2.3                | Those students, who have passed a qualifying examination other than the PUC II examination of the Pre-University Education Board of Karnataka, have to obtain eligibility certificate for seeking admission to B.E./B.Tech. Degree Programme from Visvesvaraya Technological University, Belagavi.  |
| 17 OB3.0                | Courses   |
|                         | <ul> <li>There shall be the following types of Courses: <ul> <li>a) Humanities and Social Sciences (HSS) including Management. These are mandatory for all disciplines.</li> <li>b) Basic Sciences (BS): Physics, Chemistry and Mathematics. These are mandatory for all disciplines.</li> <li>c) Engineering Sciences (ES): Materials, Workshop, Drawing, and Basics of Electrical/ Electronics/ Instrumentation/ Civil/ Mechanical/ Computer Engineering. These are mandatory for all disciplines.</li> <li>d) Professional Subjects (PS) - Core: Are the professional Core (PC) Courses, relevant to the chosen specialization/ branch. The core Courses are to be compulsorily studied by a student and are mandatory to complete them to fulfill the requirements of a programme.</li> <li>e) Professional Subjects (PS) - Elective: Are the professional Electives (PE), relevant to the chosen specialization/ branch and can be chosen from the pool of papers. It shall be supportive to the discipline providing extended scope/enabling an exposure to some other discipline /domain and nurturing student proficiency skills.</li> <li>f) Open Subjects - Electives (OE): Are from other technical areas and/ or from emerging fields.</li> <li>g) Mini project and Main Project: Carried out at the Institution or at an Industry.</li> <li>h) Seminar: Deliverable at the Institution under the supervision of a Faculty.</li> <li>i) Internship: Preferably at an industry/R and D organization/IT company/Government organization of significant repute for a specified period mentioned</li> </ul> </li> </ul> |

|                         | k) Audit Courses (AC): Knowledge/ skill enhancement Courses without the benefit  |
|-------------------------|--|
|                         | <ul> <li>Audit Courses (AC): Knowledge/ skill enhancement Courses without the ocherne<br/>of a grade or credit for a Course.</li> </ul>  |
| 17 OB3.1<br>(continued) | i) The Audit Course/s (other than the Course/s considered for completing the   |
|                         | prescribed program credits) can be any Course offered by the program to<br>which the student is admitted to or of other programs offered in the institution  |
|                         | where the student is studying.<br>ii) The students who are interested in audit Courses can register for one audit  |
|                         | Course at a time during III to VIII semesters. Students, who have opted for<br>audit Courses and considered on par with students registered for credit<br>Courses, have to satisfy the attendance and CIE requirements. However, they<br>need not have to appear for SEE.<br>The number of registrations to an audit Course is restricted to 10 % of the<br>AICTE intake.  |
|                         | <li>iii) Registration for any audit Course, in writing, shall be completed at the<br/>beginning of semesters. The Institution should intimate the Registration</li>  |
|                         | (Evaluation) about the registration at the beginning of the semester and<br>obtain a formal approval for inclusion of the audit Course/s in the Grade<br>cards/ Transcripts issued to the students.  |
| 17 OB3.2                | The minimum number of students registered to any Elective offered by the Departments shall be not less than ten. However this is not applicable to cases where the elective class strength is less than ten.   |
| 17 OB3.3                | A student shall exercise his option in respect of Elective Courses and register for the same at the beginning of the concerned semester.<br>The student may be permitted to opt for a change of Elective Course within 15 days from the date of commencement of the semester as per the calendar of the University.  |
| 17 OB3.4                | Course Registration: Every student shall register for the Courses of a semester<br>(Credits) under the supervision of a Faculty Advisor (also called Mentor<br>Counselor etc.,) in each Semester for the Institution to maintain proper record.  |
| 17OB4.0                 | Internship/Professional Practice   |
| 170B4.1                 | <ol> <li>Internship / Professional Practice:         <ol> <li>The Internship shall be completed during the period specified in the Scheme or Teaching and Examination.</li> <li>The internship can be carried out in any industry/R and D Organization/Research Institute/ Educational institute of repute.</li> <li>(a) The Department/college shall nominate staff member/s to facilitate, guide and supervise students under internship.</li> </ol> </li> </ol>   |

| 17OB8.3  | In the case of a Practical, the CIE marks shall be based on the laboratory journals/ records (30 Marks on continuous evaluation based on conduct of experiment, viva and report writing) and one practical test (10 Marks) to be conducted at the end of the semester.  |
|----------|---|
| 170B8.4  | <ul> <li>(i) The CIE marks for I year Computer Aided Engineering / Drawing:</li> <li>a) 24 marks for class work (sketching and Computer Aided engineering Drawing).</li> <li>b) 16 marks for test conducted in the same pattern as that of SEE (The marks secured can be taken as best of the two tests).</li> <li>(ii) The CIE marks for other Drawings/ Design Drawings offered by various branches shall be based on the evaluation of the sheets and one test in the ratio 60:40.</li> </ul>  |
| 17OB8.5  | The CIE marks in the case of projects and seminars in the final year shall be based on the evaluation at the end of VIII semester by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the project / seminar guide.   |
| 170B8.6  | <ul> <li>i. For theory Courses, there shall not be any minimum requirements of CIE marks.</li> <li>ii. Minimum requirement of CIE marks for Practical/ Internship/Project work shall be 50% of the maximum marks.</li> <li>iii. For seminar, the minimum requirement of CIE marks shall be 40% of the maximum marks.</li> </ul>   |
| 17088.7  | <ul> <li>i) Students failing to secure a minimum of 50% of the CIE marks in Practical/<br/>Internship/Project work shall not be eligible for the Practical / Internship/Project<br/>examination conducted by the University and they shall be considered as failed in<br/>that/those Course/s. However, they can appear for University examinations conducted in<br/>other Courses of the same semester and backlog Courses if any.<br/>Students after satisfying the prescribed minimum CIE marks in the Course/s when offered<br/>during subsequent semester shall appear for SEE.</li> <li>ii) If any student fails to secure a minimum of 40% of the maximum CIE marks in seminar/<br/>fails to deliver the seminar, he/she shall be considered as failed in that Course and shall<br/>not be eligible for the award of degree. However, the student shall become eligible for the<br/>award of degree after satisfying the requirements prescribed for seminar during the<br/>subsequent semester/s.</li> <li>iii) The Course/s under 170B8.6 (ii) and (iii), when repeated are considered as attempts.</li> </ul> |
| 170B8.8  | CIE marks of those students, who come under 17OB8.7, shall be sent separately to the Registrar (Evaluation).  |
| 170B8.9  | If a student remains absent for all the CIE tests conducted, the CIE Marks shall be marked as AB for the Courses against the University Seat Number (USN) of the student in the marks sheet submitted to the University by the Principal of the College.  |
| 170B8.10 | Improvement of CIE marks shall not be allowed in<br>a. Theory Courses and<br>b. Laboratory/Workshop/Seminar/Internship/Project where the student has already secured<br>the minimum required marks.   |
| 17088.11 | The final list, incorporating corrections (if any) of CIE marks awarded to the students in the Theory/Practical/Internship/Project work/ Seminar, shall be displayed on the notice board of the college at least seven days before the closure of the semester and a certified copy of the same shall be sent by the Principal to the University Examination Section within the stipulated date. Every page of the CIE marks sheet shall bear the signatures of the concerned Teacher/Teachers, Head of the Department and Principal.   |
| 17OB8.12 | Any corrections or overwriting of CIE marks shall bear the signature(s) of concerned Teacher(s) and in such cases the Head of the Department shall indicate the number of corrections on every sheet and attest it with his/her signature.  |

| 17OB8.13 | CIE marks shall reach the University before the commencement of examination as per the notification issued from the office of the Registrar (Evaluation) from time to time. After the   |
|----------|---|
|          | submission of CIE marks to the University, any request under any circumstances for change of CIE marks shall not be considered.   |
| 17OB 9.0 | Eligibility for Passing and Award of Degree(To be read along with 170B4.2, 5.1, 5.2, 8.6 and 8.7)   |
| 1708 9.1 | <ul> <li>(a) For a pass in a theory Course/Drawing, the student shall secure minimum of 35% of the maximum marks prescribed in the University examination and in total 40% of the maximum marks (i.e., prescribed for SEE and CIE) including the CIE marks secured by the student.</li> <li>(b) The Minimum Passing letter grade in a Course is 'E'.</li> <li>(c) For a pass in a Practical/Internship/Project/Viva-voce examination, a student shall secure a minimum of 40% of the maximum marks prescribed for the University Examination. The Minimum Passing Grade in a Course is 'E'.</li> </ul>  |
| 17OB 9.2 | <ol> <li>A students who obtain any grade from 'S' to 'E' shall be considered as passed.</li> <li>If a student secure F grade in any of the head of passing (17 OB 4.2, 17 OB 5.1, 17 OB 5.2<br/>and 17 OB 11.2) he/she has to reappear in that head for the SEE.</li> <li>A student will be declared successful at the end of academic year if he/she has not more<br/>than four 'F' grades in the immediate preceding two semesters.</li> <li>A student will be declared successful at the end of program, when he/she has none of the<br/>Courses remaining with F grade and shall have CGPA of greater than or equal to 5.00.</li> <li>In case, the CGPA falls below 5.00 at the end of the program, the student shall be<br/>permitted to appear again for SEE in full or part of the previous semester Courses by<br/>rejecting the performance for required number of Course/s (other than seminar, Project<br/>and Practical's) and times, subject to the provision of 17OB1.5, to make up CGPA equal<br/>to or greater than 5.00. The student should reject the SEE results of the previous attempt<br/>and obtain written permission from the Registrar (Evaluation) to reappear in the<br/>subsequent SEE.</li> </ol> |
| 17OB 9.3 | The students who do not satisfy the provision 17OB9.2 (1) and the students who remain<br>absent for the University examinations shall be deemed to have failed in that Course/s. They<br>have to reappear for the University examination in the subsequent examinations. The CIE<br>marks awarded to the student/s at first attempt in the concerned theory Course/s will be<br>carried forward.<br>Revised CIE marks are considered only in cases under the provisions of 17OB8.7.   |
| 17OB 9.4 | Students who pass a Course of a semester as per 17OB 9.1 and has earned CGPA equal to or greater than 5.00 shall not be allowed to appear for any individual Course/s again, unless they opt for rejection of results of entire semester as per 17OB 9.5.   |
| 17OB9.5  | A student may, at his/her desire, reject the total performance of a semester (including CII marks) or reject only the result of his/her performance in University examination of a semester. The rejection is permitted only once during the entire programme of study.   |
| 17089.6  | The student who desires to reject the results of a semester shall reject performance in all the Courses of the semester, irrespective of whether the student has passed or failed in any Course. However, the rejection of performance of VIII semester project shall not be permitted.   |

| 170B9.7   | A student, who desires to reject the total performance of a semester including CIE marks, has to take readmission for that semester.  |
|-----------|---|
|           | Application for approval of readmission shall be sent to the Registrar through the Principal of College within 30 days from the date of the announcement of the results. Late submission of application shall not be accepted for any reasons.  |
|           | Readmission to First semester in such cases shall not be considered as fresh admission and therefore the student will continue to have the same University Seat Number, which was allotted earlier. The Course duration (as per 17OB1.5) will be counted with reference to old USN.   |
| 17OB9.8   | The student, who rejects only the results of University examination of a semester, shall be permitted to re-appear for University examinations of all the Courses of that semester in the subsequent examinations. However, the CIE marks obtained by the student in the rejected semester shall be retained.<br>Applications for rejection and approval to reappear for University examination shall be sent to the Registrar (Evaluation) through the Principal of the College within 30 days from the date of announcement of the results. Late submission of applications shall not be accepted for any reasons.  |
|           | If the rejection of results of University examination is of odd semester, the student shall be allowed to take admission to the immediate next even semester. However, if the rejection of results of University examination is of even semester, then the student shall not be allowed to take admission to the next odd semester (as per 17OB11.2).   |
| 17OB9.9   | Students who opt for rejection of results of University examination are eligible for the award of class and distinction, but are not eligible for the award of ranks.   |
| 17089.10  | A student shall be declared to have completed the program of B.E. / B.Tech. degree, provided the student has undergone the stipulated Course work as per the Scheme of Teaching and Examination and has earned the prescribed number of credits as per the provision 17OB1.6, having CGPA $\geq$ 5.00 with none of the registered courses remaining with 'F' grade.   |
| 17OB10.0  | Attendance Requirement  |
| 170B10.1  | Courses of each semester shall be treated as a separate unit for calculation of the attendance. The candidate has to put in a minimum attendance of 85% in each Course with a provision to condone 10% of the attendance by the Vice-Chancellor on the specific recommendations of the Principal of the college where the candidate is studying, based on medical grounds, participation in University/State/ National/ International level sports and cultural activities, seminars, workshops, paper presentation etc., of significant value. The supporting documents for condoning the shortage of attendance are to be submitted along with the recommendations.   |
| 17OB 10.2 | The datum for the calculation of attendance shall be the number of Teaching hours prescribed for a Course [50 hours for 04 credit Courses (theory), and 40 hours for 03 credit Courses (theory) counted from the date of commencement of the semester. In case of Laboratories, the number of classes (deemed as teaching hours) is equal to the number of experiments prescribed under main heading]. In case of late admission, approved by competent authority (DTE/VTU), to I semester/III semester (lateral entry scheme)/ III semester (lateral entry scheme) of Engineering programme conducted during evening the attendance shall be reckoned from the date of |

| 170B10.3  | The Course Instructor/ Mentor/College shall inform the students as well as their parents about<br>the attendance status periodically. Students who are facing the shortage of attendance be<br>mentored to make up the shortage. Principals shall also notify every month, the list of<br>candidates who are under short of attendance.  |  |  |  |  |
|-----------|--|--|--|--|--|
| 17OB10.4  | A candidate, who does not satisfy the attendance requirement (in one or more Courses) as mentioned in 17OB10.1 shall not be eligible to appear for the SEE of that semester and shall not be permitted to take admission to next higher semester. The candidate shall be required to repeat that semester during the subsequent year.  |  |  |  |  |
| 17OB 10.5 | The list of the candidates falling short of attendance shall be sent to Registrar (Evaluation) at least once in a month and final list shall be sent one week prior to the commencement of the examination.<br>The detained students should obtain permission from Registrar, VTU for readmission to the semester concerned as a repeater.   |  |  |  |  |
| 17OB 11.0 | Promotion and Eligibility  |  |  |  |  |
| 17OB 11.1 | There shall be no restriction for promotion from an odd semester to the next even semester, provided the student has fulfilled the attendance requirement.   |  |  |  |  |
| 170B 11.2 | <ul> <li>A student shall be eligible for promotion from an even semester to next odd semester if the student has not failed in more than four heads of passing of the immediately preceding two semesters and has passed in all the Courses of all the lower semester examinations. Each credit Course shall be treated as a head of passing.</li> <li>Illustrations: <ul> <li>a) A student seeking eligibility to III semester should not have failed in more than 4 heads of passing of I and II semesters considered together.</li> </ul> </li> </ul> |  |  |  |  |
|           | b) A student seeking eligibility to V semester should have passed in all the heads<br>of passing of I and II semesters and should not have failed in more than 4 heads<br>of passing of III and IV semesters considered together.  |  |  |  |  |
|           | c) A student seeking eligibility to VII semester should have passed in all the heads of<br>passing up to IV semester and should not have failed in more than 4 heads of passing<br>of V and VI semester; considered together.  |  |  |  |  |
|           | <ul> <li>Lateral entry scheme</li> <li>a. A student seeking eligibility to V semester should not have failed in more than 4 heads of passing of III and IV semesters considered together.</li> <li>b. A student seeking eligibility to VII semester should have passed in all the subjects of III and IV semesters and should not have failed in more than 4 heads of passing of fifth and sixth semesters considered together.</li> </ul>   |  |  |  |  |

| 17OB 11.3 | a. All students admitted to I semester and to III semester under lateral entry<br>scheme to B.E./B.Tech. programme have to undergo the Mandatory non – credit<br>Courses viz., Environmental Studies and English Language. However these<br>Courses shall not be considered for the Eligibility criterion prescribed for<br>promotion, award of Class, calculation of SGPA and CGPA.  |
|-----------|---|
|           | b. The Courses viz., Advanced Mathematics I and II, to be completed by the candidates (diploma holders) admitted to III semester under lateral entry scheme shall not be considered for the eligibility criterion prescribed for promotion, award of Class, calculation of SGPA and CGPA. However, a pass in the above Courses is mandatory for the completion of the programme and award of degree.  |
|           | c. The Courses Viz., (i) Computer Aided Engineering Drawing (ii) Programming<br>in C and Data structure and (iii) Environmental Studies (if not studied at B.Sc.<br>level), to be completed by the candidates who have passed B.Sc. degree and<br>admitted to III semester of the programme, shall not be considered for the award<br>of Class, calculation of SGPA and CGPA. However, a pass in the above<br>Courses is mandatory for the completion of the programme and award of degree.   |
| 17OB 12.0 | Temporary Discontinuation/Break in the Program  |
| 170B 12.1 | <ul> <li>a) If a candidate, for any reason, temporarily discontinues the Programme or take a break from the programme during any semester intentionally, he/she may be permitted to continue the programme by registering to the same semester of the prevailing scheme. The candidate shall complete all the remaining Course work subject to the provision 17 OB 1.5. Also the Candidates may have to complete additional Course/s, if any, as per the decision of concerned Board of Studies and approval of Dean, Faculty of Engineering, on establishing equivalence between two schemes. A Grade card shall be issued to that effect. Additional Course/s shall not be considered for the eligibility criterion prescribed for promotion. However, based on the individual cases, it is considered to decide the SGPA and CGPA to admit the student for the award of degree. Such candidates shall not be eligible for the award of rank.</li> <li>b) Candidates who takes admission to any semester of the existing scheme from</li> </ul> |
|           | another scheme, as a repeater/fresher because of various reasons have to complete additional Course/s, if any, as per the decision of concerned Board of Studies and approval of Dean, Faculty of Engineering, on establishing equivalence between two schemes. A Grade card shall be issued to that effect. Additional Course/s shall not be considered for the eligibility criterion prescribed for promotion. However, based on the individual cases, it is considered to decide the SGPA and CGPA to admit the student for the award of degree. Such candidate shall not be eligible for the award of rank.   |

| 17OB 13.0  | Award of Prizes, Medals and Ranks  |  |  |  |  |  |
|------------|--|--|--|--|--|--|
| 17OB 13.1  | For the award of Prizes and Medals, the conditions stipulated by the Donor shall be<br>considered subject to the provisions of the statutes framed by the University for such<br>awards.   |  |  |  |  |  |
| 170B 13.2  | <ol> <li>For award of rank in a Specialization of Bachelor of Engineering/ Technology, the<br/>CGPA secured by the students from III to VIII semester is considered.</li> <li>A student shall be eligible for a rank at the time of award of degree of<br/>Bachelor of Engineering/ Technology, provided the student,         <ul> <li>a)</li> <li>(i) Has passed I to VIII semester in all the Courses in first attempt only in case<br/>of candidates admitted I year.</li> <li>(ii) Has passed II to VIII semester in all the Courses in first attempt only in case<br/>of candidates admitted under lateral entry scheme.</li> <li>(iii) Has completed all the prescribed Audit/mandatory Courses.</li> <li>b) Is not a repeater in any semester because of rejection of result of a semester/<br/>shortage of attendance etc.</li> <li>c) Has completed all the semesters without any break/discontinuity.</li> <li>d) Has onbeed the semesters (I to VIII/III to VIII) in VTU constituent college<br/>or in any VTU affiliated non-autonomous college.</li> <li>e) Has not been transferred from autonomous institution affiliated to VTU or from<br/>any other University.</li> </ul> </li> <li>The total number of ranks awarded shall be 10% of total number of students<br/>appeared in VIII semester subject to a maximum of 10 students should have<br/>appeared in the VIII semester examination.</li> <li>Illustration:                 <ul> <li>a. If 1228 students appeared for the VIII semester in Electronics and<br/>Communication Engineering programme, the number of ranks to be<br/>awarded for Electronics and Communication Engineering shall be 10.</li> <li>b. If 90 students appeared for the VIII semester in Biomedical Engineering, the<br/>number of ranks to be awarded for Biomedical Engineering will be 09.</li></ul></li></ol> |  |  |  |  |  |
| 17 OB 13.3 | Ranks are awarded based on the merit of the students as determined CGPA. If two<br>or more students get the same CGPA, the tie shall be resolved by considering the number<br>of tin es a student has obtained higher SGPA. If it is not resolved even at this stage, the<br>number of times a student has obtained higher grades like S, A, B etc., shall be taken<br>into account to decide the order of the rank.   |  |  |  |  |  |
| 17OB 14.0  | Transfers of Students  |  |  |  |  |  |
| 17OB 14.1  | Transfer of students from one college to another college within Karnataka state shall be permitted only at the beginning of third, fifth, and seventh semesters, subject to availability of seats within the permitted intake in respective Colleges and subject to the prior approval of the University.  |  |  |  |  |  |

| 17OB 14.1<br>(continued) | (a) Transfer of students from one non - autonomous to a nother non - autonomous<br>college affiliated to VTU is permitted with the approval of the Registrar, VTU<br>subject to the provision 17OB11.2.  |
|--------------------------|--|
|                          | The students seeking transfer shall have to,   |
|                          | (i) Obtain No Objection certificate for admission from the University and from   |
|                          | both the colleges before the commencement of term as notified by VTU.  |
|                          | <li>(ii) Complete the programme subject to the provision 17OB1.5.</li>   |
|                          | (b) Transfer of students from an autonomous to non – autonomous college affiliated to  |
|                          | VTU is permitted with the approval of the Registrar VTU provided the candidates have passed in all the Courses of the previous semesters.  |
|                          | The students seeking transfer shall have to,   |
|                          | (i) Obtain No Objection certificate for admission from the University and from both  |
|                          | the colleges before commencement of term as notified by VTU.   |
|                          | (ii) Complete additional Course/s, if any, as per the decision of concerned  |
|                          | Board of Studies and approval of Dean, Faculty of Engineering, on<br>establishing equivalence between two schemes. A Grade card shall be<br>issued to that effect.   |
|                          | Additional Course/s shall not be considered for the Eligibility criterion<br>prescribed for promotion, Class, calculation of SGPA and CGPA. However, a<br>pass in the Additional Courses, if any, is mandatory before the completion of<br>Degree.   |
|                          | <li>iii) Complete the programme subject to the provision 17OB1.5.</li>   |
|                          | (c) In the case of students from Universities other than VTU, the students must have   |
|                          | passed in all the Courses of I and II semesters for admission to III semester and all  |
|                          | the Courses of I to IV semesters for admission to V semester and all the Courses of  |
|                          | I to VI semesters for admission to VII semester.   |
|                          | The students seeking admission from other Universities to VTU shall have to,   |
|                          | <ul> <li>i) Apply for establishment of equivalence with prescribed fees as notified by the<br/>VTU and obtain No Objection certificate for admission from the University</li> </ul>  |
|                          | <ul> <li>before commencement of term as notified by VTU.</li> <li>ii) Produce No Objection certificate for admission from both the colleges before commencement of term as notified by VTU.</li> <li>iii) Complete additional Course/s, if any, as per the decision of concerned Board of Studies and approval of Dean, Faculty of Engineering, on establishing</li> </ul>   |
|                          | <ul> <li>equivalence between two schemes. A Grade card shall be issued to that effect.</li> <li>Additional Course/s shall not be considered for the eligibility criterion prescribed for promotion, Class, calculation of SGPA and CGPA. However, a pass in the additional Courses, if any, is mandatory before the completion of Degree.</li> <li>(ii) Complete the programme subject to the provision 170B<sup>*</sup>.5.</li> </ul> |
| 17 OB 14.2               | Transfer of students within the College from one branch to another branch at the start of  |
|                          | III semester shall be permitted with the approval of the Registrar, VTU subject to the   |
|                          | provisions made by the Government of Karnataka and AICTE in this behalf.   |
| 17OB 14.3                | The University may prescribe fee for administrative purpose, which shall be notified   |
|                          | from time to time, for transfer from one college to another (Change of College) or one   |
|                          | branch to another branch (change of branch within the college).  |
| 17 OB 15.0               | Applicability and Power to Modify  |
| 17 OB15.1                | The regulations governing the Degree of Bachelor of Engineering/Technology of  |
|                          | Visvesvaraya Technological University shall be a binding on all concerned.   |
| 17 OB15.2                | i) Notwithstanding anything contained in the foregoing, the University shall have the  |
|                          | power to issue directions/ orders to address any issue.  |
|                          | ii) Nothing in the foregoing may be construed as limiting the power of the University to   |
|                          | in routing in the foregoing may be construct as initialing the power of the Offiversity to   |

### REGULATIONS GOVERNING THE DEGREE OF BACHELOR OF ENGINEERING/ TECHNOLOGY (B.E/B.Tech) UNDER CHOICE BASED CREDIT SYSTEM (CBCS)

Effective from the academic year 2017-18

#### Annexure -1

|          |             |   | SEMESTER B.E.                            | B Tech (PHYSI)                         | CS GROU           | P)                       |                   |           |           |             |         |

3. Internship/ Professional Practice: To be completed between the (VI and VII semester vacation) and/or (VII and VIII semester vacation) period for 4 weeks

#### ENGINEERING MATHEMATICS-I

[As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2017 -2018)

#### SEMESTER - I

| Course Code                          | : | 17MAT11 | <b>CIE Marks</b> | : | 40 |
|--------------------------------------|---|---------|------------------|---|----|
| Number of Lecture Hours/Week         | : | 04      | SEE Marks        | : | 60 |
| <b>Total Number of Lecture Hours</b> | : | 50      | Exam Hours       | : | 03 |

#### **Course Objectives:**

To enable the students to apply the knowledge of Mathematics in various engineering fields by making them to learn the following:

- \* nth derivatives of product of two functions and polar curves.
- Partial derivatives
- Vector calculus
- Reduction formulae of integration; To solve First order differential equations.
- \* Solution of system of linear equations, quadratic forms.

#### Module - 1

#### Hours - 10

#### **Differential Calculus -1:**

Determination of nth order derivatives of Standard functions - Problems. Leibnitz's theorem (without proof) - problems.

**Polar Curves** - angle between the radius vector and tangent, angle between two curves, Pedal equation of polar curves. Derivative of arc length -Cartesian, Parametric and Polar forms (without proof) - problems. Curvature and Radius of Curvature – Cartesian, Parametric, Polar and Pedal forms (without proof) -problems

#### Module - 2

#### Hours - 10

#### **Differential Calculus -2:**

Taylor's and Maclaurin's theorems for function of one variable(statement only)-problems. Evaluation of Indeterminate forms.

**Partial derivatives** – Definition and simple problems, Euler's theorem(without proof) – problems, total derivatives, partial differentiation of composite functions-problems. Definition and evaluation of Jacobians

#### Module - 3

Hours - 10

#### Vector Calculus:

Derivative of vector valued functions, Velocity, Acceleration and related problems, Scalar and Vector point functions. Definition of Gradient, Divergence and Curl-problems. Solenoidal and Irrotational vector fields. Vector identities - div( $\phi A$ ), curl( $\phi A$ ), curl(grad  $\phi$ ), div(curl A).

#### Module - 4

**Integral Calculus:** 

Reduction formula  $\int \sin^n x \, dx$ ,  $\int \cos^n x \, dx$ ,  $\int \sin^m x \cos^n x \, dx$  (m and n are positive integers), evaluation of these integrals with standard limits (0 to  $\pi/2$ ) and problems.

#### Differential Equations;

Solution of first order and first degree differential equations – Exact, reducible to exact and Bernoulli's differential equations. Orthogonal trajectories in Cartesian and polar form. Simple problems on Newton's law of cooling.

#### Module - 5

#### Hours - 10

#### Linear Algebra

Rank of a matrix by elementary transformations, solution of system of linear equations - Gauss-elimination method, Gauss –Jordan method and Gauss-Seidel method.

Eigen values and Eigen vectors, Rayleigh's power method to find the largest Eigen value and the corresponding Eigen vector. Linear transformation, diagonal-isation of a square matrix. Reduction of Quadratic form to Canonical form

#### **Course outcomes:**

On completion of this course, students are able to

- \* Use partial derivatives to calculate rates of change of multivariate functions.
- \* Analyze position, velocity, and acceleration in two or three dimensions using the calculus of vector valued functions.
- \* Recognize and solve first-order ordinary differential equations, Newton's law of cooling
- \* Use matrices techniques for solving systems of linear equations in the different areas of Linear Algebra.

#### Question paper pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- \* There will be 2 full questions(with a maximum of four sub questions) from each module.

- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### Text Books:

- 1. B.S. Grewal, "Higher Engineering Mathematics", Khanna publishers, 42nd edition, 2013.
- 2. Erwin Kreyszig, "Advanced Engineering Mathematics I," Wiley, 2013

# **Reference Books:**

- 3. H.K. Dass and Er. RajnishVerma, "Higher Engineerig Mathematics", S.Chand publishing, 1st edition, 2011.

\*\*\*\*

#### F VGINEERING CHEMISTRY

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code                   | 17CHE12/17CHE22 | CIE Marks  | 40 |
|-------------------------------|-----------------|------------|----|
| Number of Lecture Hours/Week  | 04              | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50              | Exam Hours | 03 |

#### **Course objectives:**

To provide students with knowledge of engineering chemistry for building technical competence in industries, research and development in the following fields

- \* Electrochemistry & Battery Technology.
- \* Corrosion & Metal Finishing.
- \* Fuels & Solar energy.
- \* Polymers.
- Water Technology & Nano Materials.

#### Module - 1

Hours - 10

**Electrochemistry and Battery Technology** 

Electrochemistry : Introduction, Derivation of Nernst equation for electrode potential. Reference electrodes: Introduction, construction, working and applications of calomel and Ag / AgCl electrodes. Measurement of electrode potential using calomel electrode. Ion selective electrode: Introduction; Construction and working of glass electrode, determination of pH using glass electrode. Concentration cells: Electrolyte concentration cells, numerical problems.

**Battery Technology :** Introduction, classification - primary, secondary and reserve batteries. Characteristics - cell potential, current, capacity, electricity storage density, energy efficiency, cycle life and shelf life. Construction, working and applications of Zinc-Air, Nickel- metal hydride batteries. Lithium batteries: Introduction, construction, working and applications of Li-MnO2 and Li-ion batteries.

**Fuel Cells :** Introduction, difference between conventional cell and fuel cell, limitations & advantages. Construction, working & applications of methanol-oxygen fuel cell with H2SO4 electrolyte.

#### Module - 2

Hours - 10

#### **Corrosion and Metal Finishing:**

**Corrosion:** Introduction, electrochemical theory of corrosion, galvanic series. Factors affecting the rate of corrosion: ratio of anodic to cathodic areas, nature of metal, nature of corrosion product, nature of medium – pH, conductivity, and temperature. Types of corrosion- Differential metal, differential aeration (Pitting and water line) and stress. Corrosion control: Inorganic coatings-Anodizing of Al and phosphating; Metal coatings-Galvanization and Tinning. Cathodic protection (sacrificial anodic and impressed current methods).

**Metal Finishing:** Introduction, Technological importance. Electroplating: Introduction, principles governing-Polarization, decomposition potential and overvoltage. Factors influencing the nature of electro deposit-current density, concentration of metal ion & electrolyte; pH, temperature & throwing power of plating bath; additives- brighteners, levellers, structure modifiers & wetting agents. Electroplating of Nickel (Watt's Bath) and Chromium(decorative and hard). Electro less plating: Introduction, distinction between electroplating and electro less plating, electro less plating of copper & manufacture of double sided Printed Circuit Board with copper.

#### Module - 3 Hours - 10

#### Fuels and Solar Energy:

**Fuels:** Introduction, classification, calorific value- gross and net calorific values, determination of calorific value of fuel using bomb calorimeter, numerical problems. Cracking: Introduction, fluidized catalytic cracking, synthesis of petrol by Fishcher-Tropsch process, reformation of petrol, octane and cetane numbers. Gasoline and diesel knocking and their mechanism, anti knocking agents, power alcohol & biodiesel.

**Solar Energy:** Introduction, utilization and conversion, photovoltaic cellsconstruction and working. Design of PV cells: modules, panels & arrays. Advantages & disadvantages of PV cells. Production of solar grade silicon: Union carbide process, purification of silicon (zone refining), doping of silicondiffusion technique (n&p types).

#### Module - 4

#### **Polymers:**

Introduction, types of polymerization: addition and condensation, mechanism of polymerization- free radical mechanism taking vinyl chloride as an example. Molecular weight of polymers: number average and weight average, numerical problems. Glass transition temperature (Tg): Factors influencing Tg-Flexibility, inter molecular forces, molecular mass, branching & cross linking and stereo regularity. Significance of Tg. Structure property relationship: crystallinity, tensile strength, elasticity & chemical resistivity. Synthesis, properties and applications of PMMA (plexi glass), Polyurethane and polycarbonate. Elastomers: Introduction, synthesis, properties and applications of Silicone rubber. Adhesives: Introduction, synthesis, properties and applications of epoxy resin. Polymer Composites: Introduction, synthesis, properties and applications of Kevlar. Conducting polymers: Introduction, mechanism of conduction in Poly aniline and applications of conducting poly aniline.

#### Module - 5

Hours - 10

#### Water Technology and Nanomaterials:

Water Technology: Introduction, boiler troubles with disadvantages & prevention methods-scale and sludge formation, priming and foaming, boiler corrosion(due to dissolved O2, CO2 and MgCl2). Determination of DO, BOD and COD, numerical problems on COD. Sewage treatment: Primary, secondary (activated sludge method) and tertiary methods. Softening of water by ion exchange process. Desalination of sea water by reverse osmosis & electro dialysis (ion selective).

**Nano Materials:** Introduction, properties (size dependent). Synthesis-bottom up approach (sol-gel, precipitation, gas condensation & chemical vapour condensation processes). Nano scale materials- carbon nano tubes, nano wires, fullerenes, dendrimers, nano rods, & nano composites.

#### **Course outcomes:**

On completion of this course, students will have knowledge in:

- \* Electrochemical and concentration cells. Classical & modern batteries and fuel cells.
- \* Causes & effects of corrosion of metals and control of corrosion. Modification of surface properties of metals to develop resistance to corrosion, wear, tear, impact etc. by electroplating and electro less plating.
- \* Production & consumption of energy for industrialization of country and living standards of people. Utilization of solar energy for different useful forms of energy.
- \* Replacement of conventional materials by polymers for various applications.
- \* Boiler troubles; sewage treatment and desalination of sea water, and
- \* Over viewing of synthesis, properties and applications of nanomaterials.

## Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions (with a maximum of four sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### ENGINEERING PHYSICS

[As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2017 -2018) SEMESTER - I/II

| Course Code                   | 17PHY12/17PHY22 | CIE Marks  | 40 |
|-------------------------------|-----------------|------------|----|
| Number of Lecture Hours/Week  | 04              | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50              | Exam Hours | 03 |

**CREDITS - 04** 

#### **Course Objectives:**

The Objective of this course is to make students learn and understand basic concepts and principles of physics to analyze practical engineering problems and apply its solutions effectively and meaningfully. To understand building up of models, design issues, practical oriented skills and problem solving challenges are the great task of the course. To know about shock waves and practical applications is the prime motto to introduce new technology at the initial stage of Engineering.

#### Module - 1

Hours - 10

#### Modern Physics and Quantum Mechanics

Black body radiation spectrum, Assumptions of quantum theory of radiation, Plank's law, Weins law and Rayleigh Jeans law, for shorter and longer wavelength limits. Wave Particle dualism, deBroglie hypothesis. Compton Effect. Matter waves and their Characteristic properties, Definition of Phase velocity and group velocity, Relation between phase velocity and group velocity, Relation between group velocity and particle velocity.

Heisenberg's uncertainity principle and its application, (Non-existence of electron in the nucleus). Wave function, Properties and physical significance of wave function, Probability density and Normalization of wave function. Setting up of one dimensional time independent Schrodinger wave equation. Eigen values and Eigen functions. Application of Schrodinger wave equation for a particle in a potential well of infinite depth and for free particle.

Module - 2 Hours - 10

Electrical Properties of Materials

Free-electron concept (Drift velocity, Thermal velocity, Mean collision time, Mean free path, relaxation time). Failure of classical free electron theory. Quantum free electron theory, Assumptions, Fermi factor, density of states (qualitative only) Fermi-Dirac Statistics. Expression for electrical conductivity based on quantum free electron theory, Merits of quantum free electron theory. Conductivity of Semi conducting materials, Concentration of electrons and holes in intrinsic semiconductors, law of mass action.

Temperature dependence of resistivity in metals and superconducting materials. Effect of magnetic field (Meissner effect). Type I and Type II superconductors-Temperature dependence of critical field. BCS theory (qualitative). High temperature superconductors. Applications of superconductors-. Maglev vehicles.

#### Module - 3

#### Hours - 10

#### Lasers and Optical Fibers

Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, Construction and working of CO2 laser and semiconductor Laser. Applications of Laser – Laser welding, cutting and drilling. Measurement of atmospheric pollutants. Holography–Principle of Recording and reconstruction of images.

Propagation mechanism in optical fibers. Angle of acceptance. Numerical aperture. Types of optical fibers and modes of propagation. Attenuation, Block diagram discussion of point to point communication, applications.

#### Module - 4

#### Hours - 10

Hours - 10

#### **Crystal Structure**

Space lattice, Bravais lattice–Unit cell, primitive cell. Lattice parameters. Crystal systems. Direction and planes in a crystal. Miller indices. Expression for inter – planar spacing. Co-ordination number. Atomic packing factors (SC,FCC,BCC). Bragg's law, Determination of crystal structure using Bragg's X–ray diffractometer. Polymarphism and Allotropy. Crystal Structure of Diamond, qualitative discussion of Pervoskites.

#### Module - 5

# Shock waves and Science of Nano Materials

Definition of Mach number, distinctions between- acoustic, ultrasonic, subsonic and supersonic waves. Description of a shock wave and its applications. Basics of conservation of mass, momentum and energy. Normal shock equations (Rankine-Hugonit equations). Method of creating shock waves in the laboratory using a shock tube, description of hand operated Reddy shock tube and its characteristics.

Introduction to Nano Science, Density of states in 1D, 2D and 3D structures. Synthesis : Top-down and Bottom-up approach, Ball Milling and Sol-Gel methods.

CNT - Properties, synthesis: Arc discharge, Pyrolysis methods, Applications.

Scanning Electron microscope: Principle, working and applications.

#### Course outcomes:

On Completion of this course, students are able to -

- \* Learn and understand more about basic principles and to develop problem solving skills and implementation in technology.
- \* Gain Knowledge about Modern physics and quantum mechanics will update the basic concepts to implement the skills.
- \* Study of material properties and their applications is the prime role to understand and use in engineering applications and studies.
- \* Study Lasers and Optical fibers and its applications are to import knowledge and to develop skills and to use modern instruments in the engineering applications.
- \* Understand Crystal structure and applications are to boost the technical skills and its applications.
- \* Expose shock waves concept and its applications will bring latest technology to the students at the first year level to develop research orientation programs at higher semester level.
- \* Understand basic concepts of nano science and technology.

# Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions (with a maximum of four sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### ELEMENTS OF CIVIL ENGINEERING AND MECHANICS

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### -SEMESTER - I/II

| Course Code                   | 17CIV13/17CIV23 | <b>CIE Marks</b> | 40 |
|-------------------------------|-----------------|------------------|----|
| Number of Lecture Hours/Week  | 04              | SEE Marks        | 60 |
| Total Number of Lecture Hours | 50              | Exam Hours       | 03 |

**CREDITS - 04** 

#### **Course Objectives:**

The The objectives of this course is to make students to learn basics of Civil Engineering concepts and infrastructure development, solve problems involving Forces, loads and Moments and know their applications in allied subjects. It is a pre-requisite for several courses involving Forces, Moments, Centroids, Moment of inertia and Kinematics.

#### Particulars

#### Module - 1

Introduction to Civil Engineering & Engineering Mechanics

#### Introduction to Civil Engineering

BScope of different fields of Civil Engineering - Surveying, Building Materials, Construction Technology, Geotechnical Engineering, Structural Engineering, Hydraulics, WaterResources and Irrigation Engineering, Transportation Engineering, Environmental Engineering.

#### 1 - Hours

Infrastructure: Types of infrastructure, Role of Civil Engineer in theInfrastructural Development, Effect of the infrastructural facilities onsocioeconomic development of a country.

#### 1 - Hours

Roads: Classification of Roads and their functions, Comparison of Flexible and Rigid Pavements (Advantages and Limitations)

1 - Hours

Bridges: Types of Bridges and Culverts, RCC, Steel and Composite Bridges 1 - Hours

Dams: Different types of Dams based on Material, Structural behavior and functionality with simple sketches.

Introduction to Engineering Mechanics:

Basic idealizations - Particle, Continuum and Rigid body; Newton's laws Force and its characteristics, types of forces-Gravity, Lateral and its distribution on surfaces, Classification of force systems, Principle of physical independence, superposition, transmissibility of forces, , Introduction to SI units.

#### 2 - Hours

Couple, Moment of a couple, Characteristics of couple, Moment of a force, Equivalent force - Couple system; Numerical problems on moment of forces and couples, on equivalent force - couple system.

#### 3 - Hours

#### Module - 2

# Analysis of Concurrent Force Systems

Concepts: Resultants and Equilibrium

Composition of forces - Definition of Resultant; Composition of coplanar - concurrent force system, Parallelogram Law of forces, Principle of resolved parts;

#### 3 - Hours

Numerical problems on composition of coplanar concurrent force systems. Equilibrium of forces - Definition of Equilibrant; Conditions of static equilibrium for different force systems, Lami's theorem; Numerical problems on equilibrium of coplanar – concurrent and non-concurrent force systems.

3 - Hours

# Application-Static Friction in rigid bodies in contact

2 - Hours

Types of friction, Laws of static friction, Limiting friction, Angle of friction, angle of repose; Impending motion on horizontal and inclined planes; Numerical Problems on single and two blocks on inclined planes

2 - Hours

#### Module - 3

# Analysis of Non-Concurrent Force Systems Concepts: Resultants and Equilibrium

Composition of coplanar - non-concurrent force system, Varignon's principle of moments; Numerical problems on composition of coplanar non-concurrent Force system.

5 - Hours

# Application-Support Reaction in beams

Types of Loads and Supports, statically determinate beams, Numerical problems onsupport reactions for statically determinate beams with Point load (Normal and inclined) and uniformly distributed and uniformly varying loads and Moments.

#### Module - 4

# Centroids and Moments of Inertia of Engineering Sections: Centroids

Introduction to the concept, centroid of line and area, centroid of basic geometrical figures, computing centroid for- T, L, I, Z and full/quadrant circular sections and their built up sections. Numerical problems

### **Moment of Inertia**

Introduction to the concept, Radius of gyration, Parallel axis theorem, Perpendicular axis theorem, Moment of Inertia of basic planar figures, computing moment of Inertia for - T, L, I, Z and full/quadrant circular sections and their built up sections. Numerical problems

5 - Hours

#### Module - 5

#### **Kinematics**

### **Concepts and Applications**

Definitions - Displacement - Average velocity - Instantaneous velocity -Speed - Acceleration - Average acceleration - Variable acceleration -Acceleration due to gravity - Newton's Laws of Motion.

2 - Hours

Rectilinear Motion-Numerical problems

Curvilinear Motion - Super elevation - ProjectileMotion - Relative motion -Numerical problems.

Motion under gravity-Numerical problems.

#### **COURSE OUTCOMES**

After a successful completion of the course, the student will be able to:

- 1. Know basics of Civil Engineering, its scope of study, knowledge about Roads, Bridges and Dams;
- 2. Comprehend the action of Forces, Moments and other loads on systems of rigid bodies;
- 3. Compute the reactive forces and the effects that develop as a result of the external loads;
- 4. Locate the Centroid and compute the Moment of Inertia of regular crosssections.
- 5. Express the relationship between the motion of bodies and
- 6. Equipped to pursue studies in allied courses in Mechanics.

2 - Hours

3 - Hours

#### 3 - Hours

#### **Question Paper Pattern:**

- \* 10 Questions are to be set such that 2 questions are selected from each module.
- \* 2 Questions are to be set under respective modules.
- \* Intra module questions are to be set such that the questions should cover the entire module and further, should be answerable for the set marks.
- \* Each question should be set for 20 marks (Preferably 10 marks each)
- \* Not more than 3 sub questions are to be set under any main question
- \* Students should answer 5 full questions selecting at least 1 from each module.

#### **TEXT BOOKS**

- Elements of Civil Engineering and Engineering Mechanics by M.N. Shesha Prakash and Ganesh. B. Mogaveer, PHI Learning, 3rd Revised edition (2014)
- 2. Engineering Mechanics-Statics and Dynamics by A Nelson, Tata McGraw Hill Education Private Ltd, New Delhi, 2009.
- 3. Elements of Civil Engineering (IV Edition) by S.S. Bhavikatti, New Age International Publisher, New Delhi, 3rd edition 2009.

#### PROGRAMMING IN C AND DATA STRUCTURES

[As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code                   | 17PCD13/17PCD23 | <b>CIE Marks</b> | 40 |
|-------------------------------|-----------------|------------------|----|
| Number of Lecture Hours/Week  | 04              | SEE Marks        | 60 |
| Total Number of Lecture Hours | 50              | Exam Hours       | 03 |

#### **CREDITS - 04**

#### **Course Objectives:**

The objectives of this course is to make students to learn basic principles of Problem solving, implementing through C programming language and to design & develop programming skills. To gain knowledge of data structures and their applications.

#### Module - 1

#### INTRODUCTION TO C LANGUAGE Introduction to Civil Engineering

Pseudo code solution to problem, Basic concepts in a C program, Declaration, Assignment & Print statements, Data Types, operators and expressions etc, Programming examples and exercise.

Text1: Chapter 2, and Text 2: 1.1, 1.2, 1.3

10 - Hours

#### Module - 2

#### BRANCHING AND LOOPING

Two way selection (if, if-else, nested if-else, cascaded if-else), switch statement, ternary operator? Go to, Loops (For, while-do, do-while) in C, break and continue, Programming examples and exercises. Text 1: Chapter 3. & Text 2: 4.4.

10 - Hours

#### • Module - 3 FUNCTIONS, ARRAYS AND STRINGS ARRAYS AND STRINGS

Using an array, Using arrays with Functions, Multi-Dimensional arrays. String: Declaring, Initializing, Printing and reading strings, string manipulation functions, String input and output functions, array of strings, Programming examples and Exercises.

Text 1: 5.7, & Text 2: 7.3, 7.4, chapter 9

#### Module - 1

#### INTRODUCTION TO C LANGUAGE Introduction to Civil Engineering

Pseudo code solution to problem, Basic concepts in a C program, Declaration, Assignment & Print statements, Data Types, operators and expressions etc, Programming examples and exercise.

Text 1: Chapter 2, and Text 2: 1.1, 1.2, 1.3

10 - Hours

#### Module - 2

#### BRANCHING AND LOOPING

Two way selection (if, if-else, nested if-else, cascaded if-else), switch statement, ternary operator? Go to, Loops (For, while-do, do-while) in C, break and continue, Programming examples and exercises.

Text 1: Chapter 3. & Text 2: 4.4.

10 - Hours

#### Module - 3

#### FUNCTIONS, ARRAYS AND STRINGS ARRAYS AND STRINGS

Using an array, Using arrays with Functions, Multi-Dimensional arrays. String: Declaring, Initializing, Printing and reading strings, string manipulation functions, String input and output functions, array of strings, Programming examples and Exercises.

Text 1: 5.7, & Text 2: 7.3, 7.4, chapter 9

#### 10 - Hours

**FUNCTIONS:** Functions in C, Argument Passing – call by value, call by reference, Functions and program structure, location of functions, void and parameter less Functions, Recursion, Programming examples and exercises. **Text 1:** 1.7, 1.8, Chapter 4. **Text 2:** 5.1 to 5.4

#### Module - 4

#### STRUCTURES AND FILE MANAGEMENT

Basic of structures, structures and Functions, Array of structures, structure Data types, type definition, Defining, opening and closing of files, Input and output operations, Programming examples and exercises.

Text 1: 6.1 to 6.3. Text 2: 10.1 to 10.4, Chapter 11.

#### 10 - Hours

#### Module - 5

#### POINTERS AND PREPROCESSORS & Data Structures

Pointers and address, pointers and functions (call by reference) arguments, pointers and arrays, address arithmetic, character pointer and functions, pointers to pointer ,Initialization of pointer arrays, Dynamic memory allocations methods, Introduction to Preprocessors, compiler control Directives, Programming examples and exercises.

Text 1: 5.1 to 5.6, 5.8. Text 2: 12.2, 12.3, 13.1 to 13.7.

#### 10 - Hours

Introduction to Data Structures: Primitive and non primitive data types, Abstract data types, Definition and applications of Stacks, Queues, Linked Lists and Trees.

#### Text 2: 14.1, 14.2, 14.11, 14.12, 14.13, 14.15, 14.16, 14.17, 15.1.

#### **Course outcomes:**

On completion of this course, students are able to

- \* Achieve Knowledge of design and development of C problem solving skills.
- \* Understand the basic principles of Programming in C language
- \* Design and develop modular programming skills.
- \* Effective utilization of memory using pointer technology
- \* Understands the basic concepts of pointers and data structures.

#### Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### **Text Books:**

- 1. Brian W. Kernighan and Dennis M. Ritchie: The C Programming Language, 2nd Edition, PHI, 2012.
- 2. Jacqueline Jones & Keith Harrow: Problem Solving with C, 1st Edition, Pearson 2011.

#### **Reference Books:**

 Vikas Gupta: Computer Concepts and C Programming, Dreamtech Press 2013.

- 2. R S Bichkar, Programming with C, University Press, 2012.
- 3. V Rajaraman: Computer Programming in C, PHI, 2013.

#### **COMPUTER AIDED ENGINEERING DRAWING**

[As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2017 -2018)

#### **SEMESTER - I/II**

| Course Code                          | : | 17CED14/17CED24 | <b>CIE Marks</b> | : | 40 |
|--------------------------------------|---|-----------------|------------------|---|----|
| Number of Lecture Hours/Week         | : | 6 (2T + 4L)     | SEE Marks        | : | 60 |
| <b>Total Number of Lecture Hours</b> | : | 84              | Exam Hours       | : | 03 |

#### **CREDITS - 04**

#### **Course Objectives:**

Engineering drawing is an important tool for all Engineers and for many others professionals. It is the language of Engineers. Engineering Drawing communicates all needed information from the engineer who designed a part to the workers who will manufacture it.

The aim of the subject is to equip students with the fundamentals of Computer Aided Engineering Drawing and to further the ability to communicate information by graphical means.

#### Module - 1

#### Introduction to Computer Aided Sketching

Introduction, Drawing Instruments and their uses, BIS conventions, Lettering, Dimensioning and free hand practicing. Computer screen, layout of the software, standard tool bar/menus and description of most commonly used tool bars, navigational tools. Co-ordinate system and reference planes. of HP, VP, RPP & LPP. of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz. tangency, parallelism, inclination and perpendicularity. Dimensioning, line conventions, material conventions and lettering.

06 - Hours

#### Module - 2

#### **Orthographic projections**

Introduction, Definitions - Planes of projection, reference line and conventions employed, Projections of points in all the four quadrants, Projections of straight lines (located in First quadrant/first angle only), True and apparent lengths, True and apparent inclinations to reference planes (No application problems).

Orthographic Projections of Plane Surfaces (First Angle Projection Only)

Introduction, Definitions-projections of plane surfaces-triangle, square, rectangle, rhombus, pentagon, hexagon and circle, planes in different positions by change of position method only (No problems on punched plates and composite plates).

20 - Hours

#### Module - 3

# Projections of Solids (First angle Projection only)

Introduction, Definitions – Projections of right regular tetrahedron, hexahedron (cube), prisms, pyramids, cylinders and cones in different positions (No problems on octahedrons and combination solid).

28 - Hours

#### Module - 4

# Sections And Development of Lateral Surfaces of Solids

Introduction, Section planes, Sections, Section views, Sectional views, Apparent shapes and True shapes of Sections of right regular prisms, pyramids, cylinders and cones resting with base on HP. (No problems on sections of solids) Development of lateral surfaces of above solids, their frustums and truncations. (No problems on lateral surfaces of trays, tetrahedrons, spheres and transition pieces).

15 - Hours

#### Module - 5

# Isometric Projection (Using Isometric Scale Only)

Introduction, Isometric scale, Isometric projection of simple plane figures, Isometric projection of tetrahedron, hexahedron(cube), right regular prisms, pyramids, cylinders, cones, spheres, cut spheres and combination of solids (Maximum of three solids).

15 - Hours

#### **Course outcomes:**

After studying this course,

- 1. Students will be able to demonstrate the usage of CAD software.
- Students will be able to visualize and draw Orthographic projections, Sections of solids and Isometric views of solids.
- Students are evaluated for their ability in applying various concepts to solve practical problems related to engineering drawing.

# Question paper pattern:

# Scheme of Examination

- 1. Module 1 is only for practice and Internal Assessment and not for Examination.
- Question paper for each batch of students will be sent online by VTU and has to be downloaded before the commencement of Examination of each batch. The answer sheets will have to be jointly evaluated by the Internal and External examiners.

3. A maximum of THREE questions will be set as per the following pattern (No mixing of questions from different Modules)

| Q. No. | From Modules         | Marks allotted |
|--------|----------------------|----------------|
| 1.     | Module 2             | 30             |
| 2.     | Module 3             | 40             |
| 3.     | Module 4 or Module 5 | 30             |
|        | Total                | 100            |

#### Scheme of Evaluation

| Q. No. | Solutions & Sketcl<br>on graph book | and printout | Total Marks |
|--------|-------------------------------------|--------------|-------------|
| 1.     | 10 Marks                            | 20 Marks     | 30          |
| 2.     | 15 Marks                            | 25 Marks     | 40          |
| 3.     | 15 Marks                            | 15 Marks     | 30          |
| Total  | 40 Marks                            | 60 Marks     | 100         |

Students have to submit the computer printouts and the sketches drawn on the graph sheets at the end of the examination. Both Internal and External examiners have to jointly evaluate the solutions (Sketches), Computer display and Printouts of each student for 100 Marks (40 Marks for solutions & sketches + 60 Marks for computer display and printouts). Submit the marks list along with the solution (sketches) on graph sheets and computer printouts in separate covers.

- 4. Each batch must consist of a minimum of 10 students and a maximum of 12 students
- 5. Examination can be conducted in parallel batches, if necessary.

#### Text Books:

- 1. Engineering Drawing N.D. Bhatt & V.M. Panchal, 48th edition, 2005-Charotar Publishing House, Gujarat.
- "Computer Aided Engineering Drawing" by Dr. M H Annaiah, Dr C N Chandrappa and Dr B Sudheer Premkumar Fifth edition, New Age International Publishers.

- Fundamentals of Engineering Drawing with an Introduction to Interactive Computer Graphics for Design and Production- Luzadder Warren J., Duff John M., Eastern Economy Edition, 2005- Prentice-Hall of India Pvt. Ltd., New Delhi.
- A Primer on Computer Aided Engineering Drawing-2006, Published by VTU, Belgaum.

#### **ELEMENTS OF MECHANICAL ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### **SEMESTER - I/II**

| Course Code                          | : | 17EME14/17EME24 | <b>CIE Marks</b> | : | 40 |
|--------------------------------------|---|-----------------|------------------|---|----|
| Number of Lecture Hours/Week         | : | 04              | SEE Marks        | : | 60 |
| <b>Total Number of Lecture Hours</b> | : | 50              | Exam Hours       | : | 03 |

#### **CREDITS - 04**

#### **Course Objectives:**

Students belonging to all branches of Engineering are made to learn certain fundamental topics related to mechanical engineering so that they will have a minimum understanding of mechanical systems, equipment and process.

#### Module - 1

**Energy Resources :** Non-renewable and renewable energy resources, **Petroleum based solid**, liquid and gaseous fuels, Calorific values of fuels, Combustion and combustion products of fuels, **Solar Power :** Solar Radiation.

Solar constant (definition only), Solar Thermal energy harvesting, ex: liquid flat plate collectors, solar ponds (principle of operation only), Solar photovoltaic principle. WindPower : principle of operation of a typical windmill. Hydro Power : Principles of electric power generation from hydropowerplants, Nuclear Power : Principles of Nuclear power plants, Bio Fuels : introduction to bio fuels, examples of various biofuels used in engineering applications, Comparison of biofuels with petroleum fuels in terms of calorific value and emission. Steam Formation and Properties :

Classification of boilers, Lancashire boiler, Babcock and Wilcox boiler, boiler mountings and accessories (No sketches for mountings and accessories), wet steam, saturated and superheated steam, specific volume, enthalpy and internal energy. (No numerical problems in this module)

10 - Hours

#### Module - 2

# Turbines and IC Engines and Pumps Steam turbines :

Classification, Principle of operation of Impulse and reaction turbines, Delaval's turbine, Parson's turbine. (No compounding of turbines).

Gas turbines : Classification, Working principles and Operations of Open cycle and closed cycle gas turbines.

Water turbines : Classification, Principles and operations of Pelton wheel, Francis turbine and Kaplan turbine **Internal Combustion Engines :** Classification, I.C. Engines parts, 2 Stroke and 4 stroke Petrol engines, 4 stroke diesel engines. P-V diagrams of Otto and Diesel cycles. Problems on indicated power, brake power, indicated thermal efficiency, brake thermal efficiency, mechanical efficiency, and specific fuel consumption, [numericals on IC Engines].

10 - Hours

#### Module - 3

# Machine Tools and Automation Machine Tools Operations :

Turning, facing, knurling, Thread cutting, Taper Turning by swivelling the compound rest, Drilling, Boring, Reaming, Tapping, Counter Sinking, Counter Boring, -Plane milling, End milling, Slot milling. (No sketches of Machine tools, sketches to be used only for explaining operations. Students to be shown the available machine tools in the Machine Shop of the college before explaining the operations)

#### **Robotics and Automation :**

**Robotics** :Introduction, classification based on robots configuration; Polar, cylindrical, Cartesian Coordinate and spherical. Application, Advantages, and disadvantages

Automation : Definition, types – Fixed, Programmable & Flexible automation, NC/ CNC machines: Basic elements with simple block diagrams, advantages and disadvantages.

10 - Hours

#### Module - 4

# Engineering materials and joining processes :

Engineering Materials : Types and applications of Ferrous & Nonferrous metals and alloys,

**Composites :** Introduction: Definition, Classification and applications (Air craft and Automobiles)

#### Soldering, Brazing and Welding :

Definitions, classification and method of soldering, Brazing and welding. Differences between soldering, Brazing and Welding. Description of Electric Arc Welding and Oxy-Acetylene Welding.

#### 10 - Hours

#### Module - 5

### **Refrigeration, Air-Conditioning :**

**Refrigerants :** properties of refrigerants, list of commonly used refrigerants. Refrigeration –Definitions – Refrigerating effect, Ton of Refrigeration, Ice making capacity, COP, Relative COP, unit of Refrigeration. Principle and working of vapor compression refrigeration and vapour absorption refrigeration: Principles and applications of air conditioners, Room air conditioner.

#### Course outcomes :

Students shall demonstrate knowledge associated with,

- 1. Various Energy sources, Boilers, Prime movers such as turbines and IC engines, refrigeration and air-conditioning systems
- 2. Metal removal process using Lathe, drilling, Milling Robotics and Automation.
- 3. Fair understanding of application and usage of various engineering materials.

# Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions(with a **maximum** of **four** sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module. from each module.
- \* Each full question will have sub questions covering all the topics under a module.

**Text Books:**

#### **BASIC ELECTRICAL ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### **SEMESTER - I/II**

| Course Code                          | : | 17ELE15/17ELE25 | <b>CIE Marks</b> | : | 40 |
|--------------------------------------|---|-----------------|------------------|---|----|
| Number of Lecture Hours/Week         | : | 04              | SEE Marks        | : | 60 |
| <b>Total Number of Lecture Hours</b> | : | 50              | Exam Hours       | : | 03 |

#### CREDITS - 04

#### **Course Objectives:**

- \* Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context.
- \* Provide working knowledge for the analysis of basic DC and AC circuits used in electrical and electronic devices.
- \* Develop selection skill to identify the type of generators or motors required for particular application.
- \* Highlight the importance of transformers in transmission and distribution of electric power.
- \* Emphasize the effects of electric shock and precautionary measures.
- \* Improve the ability to function on multi-disciplinary teams.

#### Module - 1

**D** C circuits: Ohm's Law and Kirchhoff's Laws, analysis of series, parallel and series- parallel circuits excited by independent voltage sources. Power and Energy. Illustrative examples.

#### 5 - Hours

#### **Electromagnetism:**

Review of field around a conductor and coil, magnetic flux and flux density, magnetomotive force and magnetic field intensity, reluctance and permeability, definition of magnetic circuit and basic analogy between electric and magnetic circuits. (These topics are not to be considered for setting the examination questions).

**Electromagnetic induction:** Definition of Electromagnetic Induction, Faradays Laws, Fleming's right hand rule, Lenz's Law, Statically and dynamically induced emf. Self-inductance, mutual inductance and coefficient of coupling. Energy stored in magnetic field. Illustrative examples. Force on current carrying conductor placed in a magnetic field, Fleming's left hand rule.

#### Module - 2

#### **DC Machines:**

Working principle of DC machine as a generator and a motor. Types and constructional features. Types of armature windings, Emf equation of generator, relation between induced emf and terminal voltage with a mention of brush contact drop and drop due to armature reaction. Illustrative examples, neglecting armature reaction.

Operation of DC motor, back emf, torque equation. Types of DC motors, characteristics and applications. Significance of back emf. Necessity of a starter for DC motor. Illustrative examples on back emf and torque.

7 - Hours

Measuring Instruments: Construction and Principle of operation of dynamometer type wattmeterand single phase induction type energy meter.

3 - Hours

#### Module - 3

#### Single-phase AC circuits:

Generation of sinusoidal voltage, frequency of generated voltage, definition and numerical values of average value, root mean square value, form factor and peak factor of sinusoidally varying quantities, phasor representation of alternating quantities. Analysis, with phasor diagrams, of R, L, C, R-L, R-C and R-L-C circuits and, parallel and series- parallel circuits. Real power, reactive power, apparent power and power factor. Illustrative examples.

#### **Domestic wiring:**

Service mains, meter board and distribution board. Brief discussion on concealed conduit wiring. Two-way and three-way control. Elementary discussion on Circuit protective devices: fuse and Miniature Circuit Breaker (MCB's). Electric shock, precautions against shock, Objectives of Earthing, types of earthing; pipe and plate earthing, Residual current circuit breaker (RCCB).

#### Module - 4

#### **Three Phase Circuits:**

Necessity and advantages of three phase systems, generation of three phase power. Definition of Phase sequence, balanced supply and balanced load. Relationship between line and phase values of balanced star and delta connections. Power in balanced three-phase circuits, measurement of power by two-wattmeter method. Determination power factor using wattmeter readings. Illustrative examples.

6 - Hours

53

#### Three PhaseSynchronous Generators:

Principle of operation, Types and constructional features, Advantages of rotating field type alternator, Synchronous speed, Frequency of generated voltage, Emf equation. Concept of winding factor (excluding the derivation of distribution and pitch factors). Illustrative examples on calculation of distribution factor, pitch factor and emf equation.

# Module - 5

#### Single Phase Transformers:

Necessity of transformer, Principle of operation and construction of singlephase transformers (core and shell types). Emf equation, losses, variation losses with respect to load, efficiency, Condition for maximum efficiency, Voltage regulation and its significance (Open Circuit and Short circuit tests, equivalent circuit and phasor diagrams are excluded). Illustrative problems on emf equation and efficiency only.

#### Three Phase Induction Motors:

Principle of operation, Concept and production of rotating magnetic field, Synchronous speed, rotor speed, Slip, Frequency of the rotor induced emf, Types and Constructional features. Slip and its significance. Applications of squirrel - cage and slip - ring motors. Necessity of a starter, starting of motor using stars-delta starter. Illustrative examples on slip calculations.

4 - Hours

#### **Course outcomes:**

After the completion of the course, the student should be able

- \* To predict the behaviour of electrical and magnetic circuits.
- \* Select the type of generator / motor required for a particular application.
- \* Realize the requirement of transformers in transmission and distribution of electric power and other applications.
- \* Practice Electrical Safety Rules & standards.
- \* To function on multi-disciplinary teams.

#### Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions (with a maximum of four sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

6 - Hours

#### **Text Books**

#### CREDITS - 04

#### **Course Objectives:**

The course objective is to make students of all the branches of Engineering to understand the efficacy of Electronic principles which are pervasive in engineering applications

#### Module - 1

Semiconductor Diodes and Applications (Text-1): p-n junction diode, Characteristics and Parameters, Diode approximations, DC load line analysis, Half-wave rectifier, Two-diode Full-wave rectifier, Bridge rectifier, Capacitor filter circuit (only qualitative approch), Zener diode voltage regulators: Regulator circuit with no load, Loaded Regulator. Numerical examples as applicable.

#### 06 - Hours

#### **Bipolar Junction Transistors:**

BJT operation, BJT Voltages and Currents, BJT amplification, Common Base, Common Emitter and Common Collector Characteristics, Numerical examples as applicable.

#### 04 - Hours

#### Module - 2

#### BJT Biasing (Text-1):

DC Load line and Bias Point, Base Bias, Voltage divider Bias, Numerical examples as applicable.

#### 04 - Hours

Introduction to Operational Amplifiers (Text-2): Ideal OPAMP, Inverting and Non Inverting OPAMP circuits, OPAMP applications: voltage follower, addition, subtraction, integration, differentiation; Numerical examples as applicable.

#### 06 - Hours

#### Module - 3

Digital Electronics (Text-2): Introduction, Switching and Logic Levels, Digital Waveform (Sections 9.1 to 9.3). Number Systems: Decimal Number

System, Binary Number System, Converting Decimal to Binary, Hexadecimal Number System: Converting Binary to Hexadecimal, Hexadecimal to Binary, Converting Hexadecimal to Decimal, Converting Decimal to Hexadecimal, Octal Numbers: Binary to Octal Conversion. Complement of Binary Numbers. Boolean Algebra Theorems, De Morgan's theorem. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, XOR Gate, NAND Gate, NOR Gate, X-NOR Gate. Algebraic Simplification, NAND and NOR Implementation (Sections 11.7 and 11.8): NAND Implementation, NOR Implementation. Half adder, Full adder.

Flip-Flops (Text-2): Introduction to Flip-Flops (Section 12.1), NAND Gate Latch/NOR Gate Latch, RS Flip-Flop, Gated Flip-Flops: Clocked RS Flip-Flop (Sections 12.3 to 12.5).

**Microcontrollers** (Ref.1): Introduction to Microcontrollers, 8051 Microcontroller Architecture and an example of Microcontroller based stepper motor control system (only Block Diagram approach).

# 05 - Hours

# Module - 5

**Communication Systems** (Text-2): Introduction, Elements of Communication Systems, Modulation: Amplitude Modulation, Spectrum Power, AM Detection (Demodulation), Frequency and Phase Modulation. Amplitude and Frequency Modulation: A comparison.

06 - Hours

**Transducers** (Text-2): Introduction, Passive Electrical Transducers, Resistive Transducers, Resistance Thermometers, Thermistor. Linear Variable Differential Transformer (LVDT). Active Electrical Transducers, Piezoelectric Transducer, Photoelectric Transducer.

#### **Course outcomes:**

After studying this course, students will be able to:

- \* Appreciate the significance of electronics in different applications,
- \* Understand the applications of diode in rectifiers, filter circuits and wave shaping,
- \* Apply the concept of diode in rectifiers, filters circuits
- \* Design simple circuits like amplifiers (inverting and non inverting), comparators, adders, integrator and differentiator using OPAMPS,
- \* Compile the different building blocks in digital electronics using logic gates and implement simple logic function using basic universal gates, and

# 05 - Hours

# 10 - Hours

#### 04 - Hours

# Module - 4

- \* Understand the functioning of a communication system, and different modulation technologies, and
- \* Understand the basic principles of different types of Transuducers.

#### Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions(with a maximum of four sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### **Course Objectives:**

To provide basic principles C programming language. To provide design & develop of C programming skills. To provide practical exposures like designing flowcharts, algorithms, how to debug programs etc.

#### Descriptions (if any):

**Demonstration of Personal Computer and its Accessories:** Demonstration and Explanation on Disassembly and Assembly of a Personal Computer by the faculty-in-charge. Students have to prepare a write-up on the same and include it in the Lab record and evaluated.

Laboratory Session-1: Write-up on Functional block diagram of Computer, CPU, Buses, Mother Board, Chip sets, Operating System & types of OS, Basics of Networking & Topology and NIC.

**Laboratory Session-2:** Write-up on RAM, SDRAM, FLASH memory, Hard disks, Optical media, CD-ROM/R/RW, DVDs, Flash drives, Keyboard, Mouse, Printers and Plotters. Introduction to flowchart, algorithm and pseudo code.

**Note: These TWO Laboratory sessions** are used to fill the gap between theory classes and practical sessions. Both sessions are to be evaluated as lab experiments.

#### Laboratory Experiments:

# Implement the following programs with WINDOWS / LINUX platform using appropriate C compiler.

Design and develop a flowchart or an algorithm that takes three coefficients

 (a, b, and c) of a Quadratic equation (ax2+bx+c=0) as input and compute all possible roots. Implement a C program for the developed flowchart/algorithm and execute the same to output the possible roots for a given set of coefficients with appropriate messages.

- Design and develop an algorithm to find the reverse of an integer number NUM and check whether it is PALINDROME or NOT. Implement a C program for the developed algorithm that takes an integer number as input and output the reverse of the same with suitable messages. Ex: Num: 2014, Reverse: 4102, Not a Palindrome
- 3a. Design and develop a flowchart to find the square root of a given number N. Implement a C program for the same and execute for all possible inputs with appropriate messages. Note: Don't use library function sqrt(n).
   3b. Design and develop a C program to read a year as an input and find whether it is leap year or not. Also consider end of the centuries.
- 4. Design and develop an algorithm to evaluate polynomial f(x) = a4x4 + a3x3
   + a2x2 + a1x + a0, for a given value of x and its coefficients using Horner's method. Implement a C program for the same and execute the program with different set of values of coefficients and x.
- 5. Draw the flowchart and Write a C Program to compute Sin(x) using Taylor series approximation given by  $Sin(x) = x (x3/3!) + (x5/5!) (x7/7!) + \dots$

Compare your result with the built- in Library function. Print both the results with appropriate messages.

- 6. Develop an algorithm, implement and execute a C program that reads N integer numbers and arrange them in ascending order using **Bubble Sort**.
- 7. Develop, implement and execute a C program that reads two matrices A (m x n) and B (p x q) and Compute product of matrices A and B. Read matrix A and matrix B in row major order and in column major order respectively. Print both the input matrices and resultant matrix with suitable headings and output should be in matrix format only. Program must check the compatibility of orders of the matrices for multiplication. Report appropriate message in case of incompatibility.
- 8. Develop, implement and execute a C program to search a Name in a list of names using Binary searching Technique.
- 9. Write and execute a C program that
  - i. Implements string copy operation STRCOPY(str1,str2) that copies a stringtr1 to another string str2 without using library function.

ii. Read a sentence and print frequency of vowels and total count of consonants.

10. a. Design and develop a C function RightShift(x,n) that takes two integers x and n as input and returns value of the integer x rotated to the right by n positions. Assume the integers are unsigned. Write a C program that invokes this function with different values for x and n and tabulate the results with suitable headings.

b.Design and develop a C function **isprime**(num) that accepts an integer argument and returns 1 if the argument is prime, a 0 otherwise. Write a C program that invokes this function to generate prime numbers between the given range.

- 11. Draw the flowchart and write a recursive C function to find the factorial of a number, n!, defined by fact(n)=1, if n=0. Otherwise fact(n)=n\*fact(n-1). Using this function, write a C program to compute the binomial coefficient nCr. Tabulate the results for different values of n and r with suitable messages.
- 12. Given two university information files **"studentname.txt"** and "usn.txt" that contains students Name and USN respectively. Write a C program to create a new file called "output.txt" and copy the content of files "studentname.txt" and "usn.txt" into output file in the sequence.

shown below . Display the contents of output file "output.txt" on to the screen.

| Student Name | USN 🖌 | Heading |
|--------------|-------|---------|
| Name 1       | USN1  |         |
| Name 2       | USN2  |         |
|              |       |         |
|              |       |         |

- 13. Write a C program to maintain a record of n student details using an array of structures with four fields (Roll number, Name, Marks, and Grade). Assume appropriate data type for each field. Print the marks of the student, given the student name as input.
- 14. Write a C program using pointers to compute the sum, mean and standard deviation of all elements stored in an array of n real numbers.

#### **Course outcomes:**

- \* Gaining Knowledge on various parts of a computer.
- \* Able to draw flowcharts and write algorithms
- \* Able design and development of C problem solving skills.
- \* Able design and develop modular programming skills.
- \* Able to trace and debug a program

#### **Conduction of Practical Examination:**

- 1. All laboratory experiments ( nos ) are to be included for practical examination.
- 2. Students are allowed to pick one experiment from the lot.
- 3. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- 4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero.

\*\*\*\*

61

#### WORKSHOP PRACTICE

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code                          | 17WSL16/17WSL26         | CIE Marks  | 40 |
|--------------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week         | 3 (1 hr Tut +2 hrs lab) | SEE Marks  | 60 |
| <b>Total Number of Lecture Hours</b> | 42                      | Exam Hours | 03 |

#### CREDITS - 02

#### **Course Objectives:**

- To impart knowledge and skill to use tools, machines, equipment, and measuring instruments.
- \* Educate students of Safe handling of machines and tools.

#### Module - 1

- 1. Use of Hand Tools: V-block, Marking Gauge, Files, Hack Saw, Drills, Taps and Minimum 3 models involving Dove tail joint, Triangular joint and Semicircular joint.
- 2. Welding: Study of electric arc welding tools & equipments, Models: Butt Joint, Lap Joint, T joint & L-joint.
- 3. Sheet Metal & Soldering Work: Development & Soldering of the models: Tray, Frustum of cone, Prism(Hexagon & Pentagon), Truncated Square Pyramid, Funnel.
- 4. Study & Demonstration of power tools in Mechanical Engineering.

#### 03 - Hours

#### Course outcomes :

At the end of the course, the student will be able to:

- 1. Demonstrate and produce different types of fitting models.
- 2. Gain knowledge of development of sheet metal models with an understanding of their applications.
- 3. Perform soldering and welding of different sheet metal & welded joints.
- 4. Understand the Basics of Workshop practices.

#### Scheme of Examination

Fitting Model / Sheet Metal Work: 50 Marks

(50% of the batch to be given Fitting and remaining 50% to be given Sheet metal work including Soldering)

| Welding:   | 30 Marks  |
|------------|-----------|
| Viva voce: | 20 Marks  |
| Total:     | 100 Marks |

**Ref Books:** Elements of Workshop Technology:Vol I : Manufacturing Processes, S K Hajra. Choudhury, A K. Hajra Choudhury, 15th Edition Reprinted 2013,Media Promoters & Publishers Pvt Ltd., Mumbai.

Note: No mini drafters and drawing boards required. Drawings (Developments) can be done on sketch sheets using scale, pencil and Geometrical Instruments

#### ENGINEERING CHEMISTRY LABORATORY

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code :                   | 17CI    | HEL17/17CHEL27       | <b>CIE Marks</b> | : | 40 |
|---------------------------------|---------|----------------------|------------------|---|----|
| Number of Lecture Hours/Week :  | 3 (1 hr | Tutorial +2 hrs lab) | SEE Marks        | : | 60 |
| Total Number of Lecture Hours : |         | 50                   | Exam Hours       | : | 03 |

#### CREDITS - 02

#### **Course Objectives:**

\* To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.

#### **Instrumental Experiments**

- 1. Estimation of FAS potentiometrically using standard K2Cr2O7 solution.
- 2. Estimation of Copper colorimetrically.
- 3. Estimation of Acids in acid mixture conductometrically.
- 4. Determination of pKa of weak acid using pH meter.
- 5. Determination of Viscosity co-efficient of the given liquid using Ostwald's viscometer.
- 6. Estimation of Sodium and Potassium in the given sample of water using Flame Photometer.

#### **Volumetric Experiments**

- 1. Estimation of Total hardness of water by EDTA complexometric method.
- 2. Estimation of CaO in cement solution by rapid EDTA method.
- 3. Determination of percentage of Copper in brass using standard sodium thiosulphate solution.
- 4. Estimation of Iron in haematite ore solution using standard K2Cr2O7 solution by External Indicator method.
- 5. Estimation of Alkalinity (OH-, CO3-- & HCO3-) of water using standard HCl solution.
- 6. Determination of COD of waste water.

#### Course outcomes:

On completion of this course, students will have the knowledge in,

\* Handling different types of instruments for analysis of materials using small quantities of materials involved for quick and accurate results, and

 Carrying out different types of titrations for estimation of concerned in materials using comparatively more quantities of materials involved for good results

# **Conduction of Practical Examination:**

- 1. All experiments are to be included for practical examination.
- 2. One instrumental and another volumetric experiments shall be set.
- 3. Different experiments shall be set under instrumental and a common experiment under volumetric.

# **Reference Books:**

- 1. G.H.Jeffery, J.Bassett, J.Mendham and R.C.Denney, "Vogel's Text Book of Quantitative Chemical Analysis"
- 2. O.P.Vermani & Narula, "Theory and Practice in Applied Chemistry", New Age International Publisers.
- 3. Gary D. Christian, "Analytical chemistry", 6th Edition, Wiley India.

#### ENGINEERING PHYSICS LAB

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code                          | :   | 17PHYL17/17PHYL27          | <b>CIE Marks</b> | : | 40 |
|--------------------------------------|-----|----------------------------|------------------|---|----|
| Number of Lecture Hours/Week         | : 3 | (1 hr Tutorial +2 hrs lab) | SEE Marks        | : | 60 |
| <b>Total Number of Lecture Hours</b> | :   | 48                         | Exam Hours       | : | 03 |

#### **CREDITS - 02**

#### **Course Objectives:**

- \* The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and fabricate engineering and technical equipments.
- \* Design of circuits using new technology and latest components and to develop practical applications of engineering materials and use of principle in the right way to implement the modern technology.

### **EXPERIMENTS:**

- 1. Black box experiment; Identification of unknown passive electrical components and determine the value of Inductance and Capacitance
- 2. Series and parallel LCR Circuits (Determination of resonant frequency and quality factor)
- 3. I-V Characteristics of Zener Diode. (determination of knee voltage, zener voltage and forward resistance)
- Characteristics of Transistor (Study of Input and Output characteristics and calculation of input resistance, output resistance and amplification factor)
- 5. Photo Diode Characteristics (Study of I–V characteristics in reverse bias and variation of photocurrent as a function of reverse voltage and intensity).
- 6. Dielectric constant (Measurement of dielectric constant).
- 7. Diffraction (Measurement of wavelength of laser source using diffraction grating).
- 8. Torsional pendulum (Determination of M.I. of wire and Rigidity modulus).
- 9. Determination of Fermi energy. (Measurement of Fermi energy in copper).
- 10. Uniform Bending Experiment (Determination of Youngs modulus of material bar).

- 11. Newtons Rings, (Determination of radius of curvature of plano convex lens).
- 12. Verification of Stefan's Law.

#### Course Outcomes:

On Completion of this course students are able to -

- \* Develop skills to impart practical knowledge in real time solution.
- Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.
- \* Design new instruments with practical knowledge.
- \* Gain knowledge of new concept in the solution of practical oriented problems and to understand more deep knowledge about the solution to theoretical problems.
- \* Understand measurement technology, usage of new instruments and real time applications in engineering studies.

Note: 1) All the above twelve experiments are to be conducted

2) Two experiments are to be performed by the students in the examination

#### ENVIRONMENTAL STUDIES

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - I/II

| Course Code                   | 1 | 17CIV18/17CIV28 | : | <b>CIE Marks</b> | 40 |
|-------------------------------|---|-----------------|---|------------------|----|
| Number of Lecture Hours/Week  | : | 02              | ; | SEE Marks        | 60 |
| Total Number of Lecture Hours | : | 25              | : | Exam Hours       | 03 |

#### **Course Objectives:**

- 1. To identify the major challenges in environmental issues and evaluate possible solutions.
- 2. Develop analytical skills, critical thinking and demonstrate socioeconomic skills for sustainable development.
- 3. To analyze an overall impact of specific issues and develop environmental management plan.

#### Module - 1

Introduction: Environment - Components of Environment Ecosystem: Types & Structure of Ecosystem, Balanced ecosystem Human Activities – Food, Shelter, And Economic & Social Security.

#### 02 - Hours

Impacts of Agriculture & Housing Impacts of Industry, Mining & Transportation Environmental Impact Assessment, Sustainable Development.

03 - Hour

#### Module - 2

Natural Resources, Water resources – Availability & Quality aspects, Water borne diseases & water induced diseases, Fluoride problem in drinking water Mineral resources, Forest Wealth Material Cycles – Carbon Cycle, Nitrogen Cycle & Sulphur Cycle.

#### 03 - Hours

Energy – Different types of energy, Conventional sources & Non Conventional sources of energy Solar energy, Hydro electric energy, Wind Energy, Nuclear energy, Biomass & Biogas Fossil Fuels, Hydrogen as an alternative energy.

#### 03 - Hours

#### Module - 3

Environmental Pollution – Water Pollution, Noise pollution, Land Pollution, Public Health Aspects.

#### 02 - Hours

Global Environmental Issues: Population Growth, Urbanization, Land Management, Water & Waste Water Management.

#### Module - 4

Air Pollution & Automobile Pollution: Definition, Effects – Global Warming, Acid rain & Ozone layer depletion, controlling measures.

03 - Hours

Solid Waste Management, E - Waste Management & Biomedical Waste Management - Sources, Characteristics & Disposal methods.

#### 02 - Hours

#### Module - 5

Introduction to GIS & Remote sensing, Applications of GIS & Remote Sensing in Environmental Engineering Practices.

#### 02 - Hours

Environmental Acts & Regulations, Role of government, Legal aspects, Role of Non-governmental Organizations (NGOs), Environmental Education & Women Education.

#### 03 - Hours

# **Course Outcome:**

Students will be able to,

- 1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale,
- 2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment,
- 3. Demonstrate ecology knowledge of a complex relationship between biotic and abiotic components
- 4. Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues

### ENGINEERING MATHEMATICS-II

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2017 -2018)

#### SEMESTER - II

| Course Code                   | : | 17MAT21 | <b>CIE Marks</b> | : | 40 |
|-------------------------------|---|---------|------------------|---|----|
| Number of Lecture Hours/Week  | : | 04      | SEE Marks        | : | 60 |
| Total Number of Lecture Hours | : | 50      | Exam Hours       | : | 03 |

#### **CREDITS - 04**

#### **Course Objectives:**

- \* To enable students to apply the knowledge of Mathematics in various engineering fields by making them to learn the following'
- \* Ordinary differential equations
- \* Partial differential equations
- \* Double and triple integration
- Laplace transform

#### Module - 1

# Linear differential equations with constant coefficients:

Solutions of second and higher order differential equations - inverse differential operator method, method of undetermined coefficients and method of variation of parameters.

#### 10 - Hours

#### Module - 2

#### **Differential equations-2:**

Linear differential equations with variable coefficients: Solution of Cauchy's and Legendre's linear differential equations.

Nonlinear differential equations - Equations solvable for p, equations solvable for y, equations solvable for x, general and singular solutions, Clairauit's equations and equations reducible to Clairauit's form.

18 . Hours

#### Module - 3

#### **Partial Differential equations:**

Formulation of Partial differential equations by elimination of arbitrary constants/functions, solution of non-homogeneous Partial differential equations by direct integration, solution of homogeneous Partial differential equations involving derivative with respect to one independent variable only. Derivation of one dimensional heat and wave equations and their solutions by variable separable method.

10 - 11.mms

#### Module - 4

#### Integral Calculus:

**Double and triple integrals:** Evaluation of double and triple integrals. Evaluation of double integrals by changing the order of integration and by changing into polar co-ordinates. Application of double and triple integrals to find area and volume. **Beta and Gamma functions:** definitions, Relation between beta and gamma functions and simple problems.

#### 10 - Hours

#### Module - 5

#### Laplace Transform

Definition and Laplace transforms of elementary functions. Laplace transforms of  $e^{at}f(t)$ .  $t^{n}f(t)$  and  $\frac{f(t)}{t}$  (without proof), periodic functions and unit-step function-problems

#### **Inverse Laplace Transform**

Inverse Laplace Transform - problems, Convolution theorem to find the inverse Laplace transforms(without proof) and problems, solution of linear differential equations using Laplace Transforms.

#### 10 - Hours

#### Course outcomes:

On completion of this course, students are able to,

- \* solve differential equations of electrical circuits, forced oscillation of mass spring and elementary heat transfer.
- \* solve partial differential equations fluid mechanics, electromagnetic theory and heat transfer.
- \* Evaluate double and triple integrals to find area, volume, mass and moment of inertia of plane and solid region.
- \* Use curl and divergence of a vector valued functions in various applications of electricity, magnetism and fluid flows.
- \* Use Laplace transforms to determine general or complete solutions to linear ODE

#### Question paper pattern:

- \* The question paper will have ten questions.
- \* Each full Question consisting of 20 marks
- \* There will be 2 full questions(with a maximum of four sub questions) from each module.
- \* Each full question will have sub questions covering all the topics under a module.
- \* The students will have to answer 5 full questions, selecting one full question from each module.

#### **Text Books:**

#### Dr. H. N. Jagannatha Reddy, BE\_ME., Ph.d.

#### REGISTRAR

Ref No. VTU/Aca/A12/2017-18/4880

Date : 14 SEP 2017

#### NOTIFICATION

- Regulations B.E/B.Tech & Scheme for 2017-18 admitted str. Ports and onwards Sub:
- 1. Resolution No 2 of 133<sup>rd</sup> Extraordinary Executive Council Meeting, dated: 11<sup>st</sup> Ref: September 2017.

2. Vice-Chancellor's order, dated 14.09.2017

With reference to the above subject, the Scheme & Regulations governing B.E/B.Tech programme from the academic year 2017-18 has been updated on the website.

#### In this regard following is brought to the notice:

- The Course Evaluation shall be carried in the ratio 60 and 40 for SEE (Semester End 1. Examination) and CIE (Continuous Internal Evaluation) respectively.
  - The SEE will be conducted for 100 marks and proportionally reduced to 60 marks. .
  - The CIE is prescribed for maximum of 40 marks. Marks prescribed for test shall be 30 and that for assignment is IO. The CIE marks for test in a theory Course shall be based on three tests generally conducted at the end of fifth, tenth and fourteenth week of each semester. Each test shall be conducted for a maximum of 30 marks and the final marks shall be the average of three tests. The remaining 10 marks shall be awarded based on the evaluation of Assignments/Unit tests/written Quizzes that support to cover some of the Course/program outcomes. Final CIE marks awarded shall be the sum of these two out of maximum of 40 marks.
  - In the case of Practical, the CIE marks shall be based on the laboratory journals/ records (30 Marks for continuous evaluation based on conduct of experiment, viva and report writing) and one practical test (10 Marks) to be conducted at the end of the semester.
- The Scheme of teaching from the academic year 2017-18 admitted batch and onwards has 2. been changed by retaining the contents of the syllabus of 2015-16 scheme as it is.

Principals of Constituent and Affiliated Engineering Colleges are required to conduct an orientation program for the students, clearly mentioning the guidelines of Regulations & Scheme. Contents of this notification may kindly be brought to the notice of all the concerned.

## VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM CHOICE BASED CREDIT SYSTEM (CBCS) CIVIL ENGINEERING BOARD <u>BE-CBCS SYLLABUS 2017-18 Scheme</u>

## B.E Civil Engineering Program Outcomes (POs)

At the end of the B.E program, students are expected to have developed the following outcomes.

- 1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
- 2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of need for sustainable development.
- 8. **Ethics :** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary

settings.

- 10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life-long learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

## Program Specific Outcomes (PSOs)

## At the end of the B.E Civil Engineering program, the students are expected to have developed the following program specific outcomes.

## **PSO1**

The graduates will have the ability to plan, analyse, design, execute and maintain cost effective civil engineering structures without overexploitation of natural resources.

## **PSO2**

The graduates of civil engineering program will have the ability to take up employment, entrepreneurship, research and development for sustainable civil society.

## PSO3

The graduates will be able to persue opportunities for personal and professional growth, higher studies, demonstrate leadership skills and engage in lifelong learning by active participation in the civil engineering profession.

## **PSO4**

The graduates will be able to demonstrate professional integrity and an appreciation of ethical, environmental, regulatory and issues related to civil engineering projects.

## **General Notes:**

1. <u>Question Paper Pattern for Theory Courses (2017 Scheme):</u>

- The question paper will have TEN questions.
- Each full question carries 20 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.
- 2. The teaching learning process should be as per the Choice Based Credit System
- 3. All Civil Engineering Departments should have a "CIVIL ENGINEERING MUSEUM" with collections related to civil engineering like models, charts, material samples, fixtures and fittings etc. which assist effective teaching learning process.
- 4. The teaching learning process may be planned to develop capabilities, competencies and skills required for career development based on course beginning and course end surveys.
- 5. Course objectives, course outcomes and RBT levels given under each course in the syllabus are broad and indicative/suggestive. The faculty can set them appropriately according to their lesson/ course plan.
- 6. The course coordinators/teachers/instructors are informed to deliberate in the faculty meeting with module coordinator, program coordinator along with the stake holders to develop the respective lesson/ course plans.
- 7. The department advisory board may make suitable changes to the course objectives, course outcomes and program objectives according to their finalized course plans.
- 8. The faculty should complement the teaching with case studies and field visits wherever required.
- 9. One faculty development program to be conducted to compliment teaching learning process by the department in a year

## **B.E: CIVIL ENGINEERING**

#### **Teaching Hours /Week** Examination Credits Teaching SI. **Course Code** Title SEE CIE Department Practical/ **Duration in** Total No. Theory Marks Drawing hours Marks Marks 17MAT31 Engineering Mathematics –III\* Maths 04 03 60 40 100 4 1 Civil Engg. 2 17CV32 04 Strength of Materials 03 60 40 100 4 Civil Engg. 3 17CV33 Fluid Mechanics 04 03 60 40 100 4 Civil Engg. 17CV34 **Basic Surveying** 04 03 60 40 100 4 4 Civil Engg. 5 17CV35 04 03 60 40 100 3 **Engineering Geology** Civil Engg. 03 17CV36 **Building Materials and Construction** 03 60 40 100 4 6 Civil Engg. **01-Hour Instruction** 17CVL37 03 7 **Building Materials Testing Laboratory** 60 40 100 2 **02-Hour Practical** Civil Engg. **01-Hour Instruction Basic Surveying Practice** 8 17CVL38 03 60 40 100 2 **02-Hour Practical** Kannada/Constitution of India, 9 17KL/CPH39/49 Humanities 01 01 30 20 50 01 Professional Ethics and Human Rights Theory: 24hours TOTAL 25 340 510 850 28 Practical: 06 hours

**1. Kannada/Constitution of India, Professional Ethics and Human Rights:** 50 % of the programs of the Institution have to teach Kannada/Constitution of India, Professional Ethics and Human Rights in cycle based concept during III and IV semesters.

2. Audit Course:

(i) \*All lateral entry students (except B.Sc candidates) have to register for Additional Mathematics – I, which is 03 contact hours per week.

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed, if:

• The candidate has no pre – requisite knowledge.

- The candidate has studied similar content course during previous semesters.
- The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied Professional elective(s). Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

| <b>Total Number of</b> | 50 (10 Hours per Module) | Exam Hours       | 03 |
| Lecture Hours          |                          |                  |    |

Credits - 04

**Course Objectives:** This course will enable students;

- 1. To understand the basic concepts of the stresses and strains for different materials and strength of structural elements.
- 2. To know the development of internal forces and resistance mechanism for one dimensional and two dimensional structural elements.
- 3. To analyse and understand different internal forces and stresses induced due to representative loads on structural elements.
- 4. To analyse and understand principal stresses due to the combination of two dimensional stresses on an element and failure mechanisms in materials.

5. To evaluate the behavior of torsional members, columns and struts.

Module-1

## Simple Stresses and Strain:

Introduction, Definition and concept and of stress and strain. Hooke's law, Stress-Strain diagrams for ferrous and non-ferrous materials, factor of safety, Elongation of tapering bars of circular and rectangular cross sections, Elongation due to self weight. Saint Venant's principle, Compound bars, Temperature stresses, Compound section subjected to temperature stresses, state of simple shear, Elastic constants and their relationship.

L1, L2

#### **Module-2**

**Compound Stresses:** Introduction, state of stress at a point, General two dimensional stress system, Principal stresses and principal planes. Mohr's circle of stresses

**Thin and Thick Cylinders:** Introduction, Thin cylinders subjected to internal pressure; Hoop stresses, Longitudinal stress and change in volume. Thick cylinders subjected to both internal and external pressure; Lame's equation, radial and hoop stress distribution.

L2,L4

**Shear Force and Bending Moment in Beams:** Introduction to types of beams, supports and loadings. Definition of bending moment and shear force, Sign conventions, relationship between load intensity, bending moment and shear force. Shear force and bending moment diagrams for statically determinate beams subjected to points load, uniformly distributed loads, uniformly varying loads, couple and their combinations.

L2,L4

#### Module-4

**Torsion in Circular Shaft:** Introduction, pure torsion, Assumptions, derivation of torsion equation for circular shafts, torsional rigidity and polar modulus Power transmitted by a shaft, combined bending and torsion.

**Theories of Failure:** Introduction, maximum principal stress theory (Rankine's theory), Maximum shearing stress theory (Tresca's theory), Strain energy theory (Beltrami and Haigh), and maximum strain theory (St. Venant's theory).

L2 ,L4

## Module-5

**Bending and Shear Stresses in Beams:** Introduction, pure bending theory, Assumptions, derivation of bending equation, modulus of rupture, section modulus, flexural rigidity. Expression for transverse shear stress in beams, Bending and shear stress distribution diagrams for circular, rectangular, T', and 'T' sections. Shear centre(only concept)

**Columns and Struts:** Introduction, short and long columns. Euler's theory; Assumptions, Derivation for Euler's Buckling load for different end conditions, Limitations of Euler's theory. Rankine-Gordon's formula for columns.

L1,L2,L4

**Course outcomes:** After studying this course, students will be able;

- 1. To evaluate the strength of various structural elements internal forces such as compression, tension, shear, bending and torsion.
- 2. To suggest suitable material from among the available in the field of construction and manufacturing.
- 3. To evaluate the behavior and strength of structural elements under the action of compound stresses and thus understand failure concepts
- 4. To understand the basic concept of analysis and design of members subjected to torsion.
- 5. To understand the basic concept of analysis and design of structural elements such as columns and struts.

## **Text Books:**

- 1. B.S. Basavarajaiah, P.Mahadevappa "Strength of Materials" in SI Units, University Press (India) Pvt. Ltd., 3rd Edition, 2010
- 2. Ferdinand P. Beer, E. Russell Johnston and Jr.John T. DeWolf "Mechanics of Materials", Tata McGraw-Hill, Third Edition, SI Units

## **Reference Books:**

- 1. D.H. Young, S.P. Timoshenko " Elements of Strength of Materials" East West Press Pvt. Ltd., 5th Edition (Reprint 2014)
- 2. R K Bansal, "A Textbook of Strength of Materials", 4th Edition, Laxmi Publications, 2010
- 3. S.S. Rattan " Strength of Materials" McGraw Hill Education (India) Pvt. Ltd., 2nd Edition (Sixth reprint 2013)
- 4. Vazirani, V N, Ratwani M M. and S K Duggal "Analysis of Structures Vol. I", 17th Edition, Khanna Publishers, New Delhi.

## TITLE OF THE COURSE: FLUIDS MECHANICS B.E., III Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| <b>Course Code</b> | 17 CV33                  | CIE Marks  | 40 |
|--------------------|--------------------------|------------|----|
| Number of          | 04                       | SEE Marks  | 60 |
| Lecture            |                          |            |    |
| Hours/Week         |                          |            |    |
| Total Number of    | 50 (10 Hours per Module) | Exam Hours | 03 |
| Lecture Hours      |                          |            |    |

## Credits - 04

**Course Objectives:** The objectives of this course is to make students to learn:

- 1. The Fundamental properties of fluids and its applications.
- 2. Hydrostatic laws and application to practical problem solving
- 3. Principles of Kinematics and Hydro-Dynamics for practical applications
- 4. Basic design of pipes and pipe networks considering flow, pressure and its losses.
- 5. The basic flow rate measurements

## Module-1

**Fluids & Their Properties:** Concept of fluid, Systems of units. Properties of fluid; Mass density, Specific weight, Specific gravity, Specific volume, Viscosity, Cohesion, Adhesion, Surface tension& Capillarity. Fluid as a continuum, Newton's law of viscosity (theory & problems).Capillary rise in a vertical tube and between two plane surfaces (theory & problems). Vapor pressure of liquid, compressibility and bulk modulus, capillarity, surface tension, pressure inside a water droplet, pressure inside a soap bubble and liquid jet. Numerical problems

**Fluid Pressure and Its Measurements:** Definition of pressure, Pressure at a point, Pascal's law, Variation of pressure with depth. Types of pressure. Measurement of pressure using simple, differential & inclined manometers (theory & problems). Introduction to Mechanical and electronic pressure measuring devices.

L2,L3

## Module-2

**Hydrostatic forces on Surfaces:** Definition, Total pressure, centre of pressure, total pressure on horizontal, vertical and inclined plane

surface, total pressure on curved surfaces, water pressure on gravity dams, Lock gates. Numerical Problems.

**Fundamentals of fluid flow (Kinematics):** Introduction. Methods of describing fluid motion. Velocity and Total acceleration of a fluid particle. Types of fluid flow, Description of flow pattern. Basic principles of fluid flow, threedimensional continuity equation in Cartesian coordinate system. Derivation for Rotational and irroational motion. Potential function, stream function, orthogonality of streamlines and equipotential lines. Numerical problems on Stream function and velocity potential. Introduction to flow net.

L2,L4

Module-3

**Fluid Dynamics:** Introduction. Forces acting on fluid in motion. Euler's equation of motion along a streamline and Bernoulli's equation. Assumptions and limitations of Bernoulli's equation. Modified Bernoulli's equation. Problems on applications of Bernoulli's equation (with and without losses).

Vortex motion; forced vortex, free vortex, problems Momentum equation problems on pipe bends.

**Applications:** Introduction. Venturimeter, Orificemeter, Pitot tube. Numerical Problems

#### Module-4

**Orifice and Mouthpiece:** Introduction, classification, flow through orifice, hydraulic coefficients, Numerical problems. Mouthpiece, classification, Borda's Mouthpiece (No problems).

**Notches and Weirs:** Introduction. Classification, discharge over rectangular, triangular, trapezoidal notches, Cippoletti notch, broad crested weirs. Numerical problems. Ventilation of weirs, submerged weirs.

L1,L2,L4

L2.L4

#### Module-5

**Flow through Pipes:** Introduction. Major and minor losses in pipe flow. Darcy-Weisbach equation for head loss due to friction in a pipe. Pipes in series, pipes in parallel, equivalent pipe-problems. Minor losses in pipe flow, equation for head loss due to sudden expansion. Numerical problems. Hydraulic gradient line, energy gradient line. Pipe Networks, Hardy Cross method, Numerical problems.

**Surge Analysis in Pipes:** Water hammer in pipes, equations for pressure rise due to gradual valve closure and sudden closure for rigid and elastic pipes. Problems

L2 ,L4

**Course outcomes:** After successful completion of the course, the student will be able to:

- 1. Possess a sound knowledge of fundamental properties of fluids and fluid Continuum
- 2. Compute and solve problems on hydrostatics, including practical applications
- 3. Apply principles of mathematics to represent kinematic concepts related to fluid flow
- 4. Apply fundamental laws of fluid mechanics and the Bernoulli's principle for practical applications
- 5. Compute the discharge through pipes and over notches and weirs

#### **Text Books:**

- 1. P N Modi and S M Seth, "Hydraulics and Fluid Mechanics, including Hydraulic Machines", 20th edition, 2015, Standard Book House, New Delhi
- 2. R.K. Bansal, "A Text book of Fluid Mechanics and Hydraulic Machines", Laxmi Publications, New Delhi
- 3. S K SOM and G Biswas, "Introduction to Fluid Mechanics and Fluid Machines", Tata McGraw Hill, New Delhi

## **Reference Books:**

1. Victor L Streeter, Benjamin Wylie E and Keith W Bedford, "Fluid Mechanics",

Tata McGraw Hill Publishing Co Ltd., New Delhi, 2008(Ed)

- 5. 5. Mohd.Kaleem Khan, "Fluid Mechanics and Machinery", Oxford University Press

## TITLE OF THE COURSE: BASIC SURVEYING B.E., III Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code            | 17 CV34                  | <b>CIE Marks</b> | 40 |
|------------------------|--------------------------|------------------|----|
| Number of              | 04                       | SEE Marks        | 60 |
| Lecture                |                          |                  |    |
| Hours/Week             |                          |                  |    |
| <b>Total Number of</b> | 50 (10 Hours per Module) | Exam Hours       | 03 |
| Lecture Hours          |                          |                  |    |

Credits – 04

**Course Objectives:** This course will enable students to;

- 1. Understand the basic principles of Surveying
- 2. Learn Linear and Angular measurements to arrive at solutions to basic surveying problems.
- 3. Employ conventional surveying data capturing techniques and process the data for computations.
- 4. Analyze the obtained spatial data to compute areas and volumes and draw contours to represent 3D data on plane figures.

## Module-1

**Introduction:** Definition of surveying, Objectives and importance of surveying. Classification of surveys. Principles of surveying. Units of measurements, Surveying measurements and errors, types of errors, precision and accuracy. Classification of maps, map scale, conventional symbols, topographic maps, map layout, Survey of India Map numbering systems.

**Measurement of Horizontal Distances:** Measuring tape and types. Measurement using tapes, Taping on level ground and sloping ground. Errors and corrections in tape measurements, ranging of lines, direct and indirect methods of ranging, Electronic distance measurement, basic principle. Booking of tape survey work, Field book, entries, Conventional symbols, Obstacles in tape survey, Numerical problems.

L1, L2

#### Module-2

**Measurement of Directions and Angles: Compass survey:** Basic definitions; meridians, bearings, magnetic and True bearings. Prismatic and surveyor's compasses, temporary adjustments, declination. Quadrantal bearings, whole circle bearings, local attraction and related problems

**Theodolite Survey and Instrument Adjustment:** Theodolite and types, Fundamental axes and parts of Transit theodolite, uses of theodolite, Temporary adjustments of transit theodolite, measurement of horizontal and vertical angles, step by step procedure for obtaining permanent adjustment of Transit theodolite

L2,L3

## Module-3

**Traversing:** Traverse Survey and Computations: Latitudes and departures, rectangular coordinates, Traverse adjustments, Bowditch rule and transit rule, Numerical Problems

**Tacheometry:** basic principle, types of tacheometry, distance equation for horizontal and inclined line of sight in fixed hair method, problems

L1, L2

L3.L4

#### Module-4

**Leveling:** Basic terms and definitions, Methods of leveling, Dumpy level, auto level, digital and laser levels. Curvature and refraction corrections. Booking and reduction of levels. Differential leveling, profile leveling, fly leveling, check leveling, reciprocal leveling, trigonometric leveling (heights and distances-single plane and double plane methods.)

#### Module-5

**Areas and Volumes**: Measurement of area – by dividing the area into geometrical figures, area from offsets, mid ordinate rule, trapezoidal and Simpson's one third rule, area from co-ordinates, introduction to planimeter, digital planimeter. Measurement of volumes- rapezoidal and prismoidal formula.

**Contouring:** Contours, Methods of contouring, Interpolation of contours, contour gradient, characteristics of contours and uses.

L2,L3

**Course outcomes:** After a successful completion of the course, the student will be able to:

- 1. Posses a sound knowledge of fundamental principles Geodetics
- 2. Measurement of vertical and horizontal plane, linear and angular dimensions to arrive at solutions to basic surveying problems.
- 3. Capture geodetic data to process and perform analysis for survey problems]
- 4. Analyse the obtained spatial data and compute areas and volumes. Represent 3D data on plane figures as contours

#### **Text Books:**

- 1. B.C. Punmia, "Surveying Vol.1", Laxmi Publications pvt. Ltd., New Delhi 2009.
- 2. Kanetkar T P and S V Kulkarni , Surveying and Leveling Part I, Pune Vidyarthi Griha Prakashan, 1988

## **Reference Books:**

- 1. S.K. Duggal, "Surveying Vol.1", Tata McGraw Hill Publishing Co. Ltd. New Delhi.2009.
- 2. K.R. Arora, "Surveying Vol. 1" Standard Book House, New Delhi. 2010
- 3. R Subramanian, Surveying and Leveling, Second edition, Oxford University Press, New Delhi
- 4. A. Bannister, S. Raymond , R. Baker, "Surveying", Pearson, 7th ed., New Delhi

## TITLE OF THE COURSE: ENGINEERING GEOLOGY B.E., III Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code            | 17 CV35                  | <b>CIE Marks</b> | 40 |
|------------------------|--------------------------|------------------|----|
| Number of              | 04                       | SEE Marks        | 60 |
| Lecture                |                          |                  |    |
| Hours/Week             |                          |                  |    |
| <b>Total Number of</b> | 50 (10 Hours per Module) | Exam Hours       | 03 |
| Lecture Hours          | · · ·                    |                  |    |

#### Credits - 04

Course Objectives: This course will enable students;

1. To understand the internal structure and composition of the earth.

- 2. To comprehend the properties, occurrence and uses of minerals in various industries.
- 3. To learn about geo-morphological agents such as river, wind, sea waves, and their implications in implementing civil engineering projects.
- 4. To gain knowledge about the structures of the rocks and their considerations in the selection of site for dams, tunnels, bridges and highways.
- 5. To learn the application of Topographic maps, remote sensing and GIS in Civil engineering practices and natural resource management.

#### Module-1

**Introduction:** Application of Earth Science in Civil Engineering Practices, Understanding the earth, internal structure and composition.

**Mineralogy:** Mineral properties, composition and their use in the manufacture of construction materials – Quartz Group (Glass); Feldspar Group (Ceramic wares and Flooring tiles); Kaolin (Paper, paint and textile); Asbestos (AC sheets); Carbonate Group ( Cement) ; Gypsum (POP, gypsum sheets, cement); Mica Group (Electrical industries); Ore minerals - Iron ores (Steel); Chromite (Alloy); Bauxite (aluminum); Chalcopyrite (copper)

L1,L2

#### Module-2

**Petrology:** Formation, Classification and Engineering Properties. Rock as construction material, concrete aggregate, railway ballast, roofing, flooring, cladding and foundation. Deformation of rocks, Development of Joints, Folds, Faults and Unconformities. Their impact in the selection of sites for Dams, Reservoirs, Tunnels, Highways and Bridges, Rock Quality Determination (RQD), Rock Structure Rating (RSR),: Igneous Rocks - Granite, Gabbro, Dolerite, Basalt; Sedimentary rocks - Sandstone, Shale, Limestone, Laterite; Metamorphic rocks -Gneiss, Quartzite,Slate, Charnockite: Decorative stones - Porphyries, Marble and Quartzite

L2,L3.

#### Module-3

**Geomorphology and Seismology:** Landforms – Classification, Rock weathering, types and its effects on Civil Engineering Projects. Study of Geo-morphological

aspects in the selection of sites for Dams, Reservoirs, Tunnels, Highways and Bridges. Watershed management, Floods and their control,River valley, Drainage pattern – parameters and development; Coastlines and their engineering considerations.

Earthquake - Causes and Effects,, Seismic waves, Engineering problems related to Earthquakes, Earthquake intensity, Richter Scale, Seismograph, Seismic zones-World and India, Tsunami – causes and effects. Early warning system. Reservoir Induced Seismicity; Landslides – causes and their control

Module-4

## L2, L3, L5.

**Hydrogeology:** Hydrological cycle, Occurrence of Groundwater in different terrains -Weathered, Hard and Stratified rocks; Determination of Quality aspects - SAR, RSC and TH of Groundwater. Groundwater Pollution, Groundwater Exploration-Electrical Resistivity and Seismic methods, Resistivity curves, Water Bearing Formations, Aquifer types and parameters - Porosity, Specific yield and retention, Permeability, Transmissibility and Storage Coefficient. Springs and Artesian Wells, Artificial Recharging of Groundwater, Sea water intrusion and remedies.

#### Module-5

**Geodesy:** Study of Topographic maps and Contour maps; Remote Sensing – Concept, Application and its Limitations; Geographic Information System (GIS) and Global Positioning System (GPS) – Concept and their use resource mapping. LANDSAT Imagery–Definition and its use. Impact of Mining, Quarrying and Reservoirs on Environment. Natural Disasters and their mitigation.

L2,L3, L5

L4,L5

**Course outcomes:** After a successful completion of the course, the student will be able to:

- 1. Students will able to apply the knowledge of geology and its role in Civil Engineering
- 2. Students will effectively utilize earth's materials such as mineral, rocks and water in civil engineering practices.
- 3. Analyze the natural disasters and their mitigation.
- 4. Assess various structural features and geological tools in ground water exploration, Natural resource estimation and solving civil engineering problems.
- 5. Apply and asses use of building materials in construction and asses their properties

## **Text Books:**

- 1. P.K. Mukerjee, "A Text Book of Geology", World Press Pvt., Ltd. Kolkatta.
- 2. Parbin Singh, "Text Book of Engineering and General Geology", Published by S.K.Kataria and Sons, New Dehli

| Lecture Hours          | · · · ·                  |            |    |

#### Credits - 04

**Course Objectives:** This course will develop a student;

1. In recognizing the good materials to be used for the construction work

- 2. In investigation of soil condition, Deciding and design of suitable foundation for different structures
- 3. In supervision of different types of masonry
- 4. In selection of materials, design and supervision of suitable type of floor and roof.
- 5. To gain knowledge about doors, windows, plastering, painting, damp proofing, scaffolding, shoring, underpinning and to take suitable engineering measures.

#### Module-1

**Building Materials**: Stone as building material; Requirement of good building stones, Dressing of stones, Deterioration and Preservation of stone work. Bricks; Classification, Manufacturing of clay bricks, Requirement of good bricks. Field and laboratory tests on bricks; compressive strength, water absorption, efflorescence, dimension and warpage.

Cement Concrete blocks, Stabilized Mud Blocks, Sizes, requirement of good blocks.

Mortar: types and requirements. Timber as construction material

Fine aggregate: Natural and manufactured: Sieve analysis, zoning, specify gravity, bulking, moisture content, deleterious materials.

Coarse aggregate: Natural and manufactured: Importance of size, shape and texture. Grading of aggregates, Sieve analysis, specific gravity, Flakiness and elongation index, crushing, impact and abrasion tests.

## L1 L2

## Module-2

**Foundation:** Preliminary investigation of soil, safe bearing capacity of soil, Function and requirements of good foundation, types of foundation, introduction to spread, combined, strap, mat and pile foundation

**Masonry:** Definition and terms used in masonry. Brick masonry, characteristics and requirements of good brick masonry, Bonds in brick work, Header, Stretcher, English, Flemish bond, Stone masonry, Requirements of good stone masonry, Classification, characteristics of different stone masonry, Joints in stone masonry. Types of walls; load bearing, partition walls, cavity walls

| Module-3   |
|--|
| <b>Lintels and Arches</b> : Definition, function and classification of lintels, Balconies, chejja and canopy. Arches; Elements and Stability of an Arch.   |
| Floors and roofs: Floors; Requirement of good floor, Components of ground floor,<br>Selection of flooring material, Laying of Concrete, Mosaic, Marble, Granite, Tile<br>flooring, Cladding of tiles. Roof;-Requirement of good roof, Types of roof, Elements<br>of a pitched roof, Trussed roof, King post Truss, Queen Post Truss, Steel Truss,<br>Different roofing materials, R.C.C. Roof. |
| Module-4   |
| <b>Doors, Windows and Ventilators</b> : Location of doors and windows, technical terms,  |
| Materials for doors and windows, Paneled door, Flush door, Collapsible door,<br>Rolling shutter, PVC Door, Paneled and glazed Window, Bay Window, French<br>window. Ventilators. Sizes as per IS recommendations   |
| <b>Stairs:</b> Definitions, technical terms and types of stairs, Requirements of good stairs. Geometrical design of RCC doglegged and open-well stairs. <b>Formwork:</b> Introduction to form work, scaffolding, shoring, under pinning.   |
| L2 L3 L5   |
| Module-5   |
| <b>Plastering and Pointing</b> : purpose, materials and methods of plastering and pointing, defects in plastering-Stucco plastering, lathe plastering <b>Damp proofing</b> -causes, effects and methods.   |
| <b>Paints</b> - Purpose, types, ingredients and defects, Preparation and applications of paints to new and old plastered surfaces, wooden and steel surfaces.<br>L4 L5   |
| <b>Course outcomes:</b> After a successful completion of the course, the student will be able to:  |
| <ol> <li>Select suitable materials for buildings and adopt suitable construction techniques.</li> <li>Adopt suitable repair and maintenance work to enhance durability of buildings.</li> </ol>  |

## Question paper pattern:

• Group experiments - Tension test, compression test, torsion test and

bending test.

- Individual Experiments Remaining tests.
- Two questions are to be set One from group experiments and the other as individual experiment.
- Instructions as printed on the cover page of answer script for split up of marks to be strictly followed.
- All exercises are to be included for practical examination.

**Course outcomes:** After a successful completion of the course, the student will be able to:

- 1. Apply the basic principles of engineering surveying for linear and angular measurements.
- 2. Comprehend effectively field procedures required for a professional surveyor.
- 3. Use techniques, skills and conventional surveying instruments necessary for engineering practice.

#### **Question paper pattern:**

- All are individual experiments.
- Instructions as printed on the cover page of answer script for split up of marks to be strictly followed.
- All exercises are to be included for practical examination.

### VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM CHOICE BASED CREDIT SYSTEM (CBCS) CIVIL ENGINEERING BOARD <u>BE-CBCS SYLLABUS 2017-18 Scheme</u>

## TITLE OF THE COURSE: Analysis of Determinate Structures B.E., IV Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code     | 17 CV42                  | CIE Marks  | 40 |
|-----------------|--------------------------|------------|----|
| Number of       | 04                       | SEE Marks  | 60 |
| Lecture         |                          |            |    |
| Hours/Week      |                          |            |    |
| Total Number of | 50 (10 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   |                          |            |    |

Credits - 04

#### **Course Objectives:** This course will enable students to

- 1. Apply knowledge of mathematics and engineering in calculating slope and deflections
- 2. Identify, formulate and solve engineering problems
- 3. Analyse structural systems and interpret data
- 4. Engage in lifelong learning with the advances in Structural Engineering

#### Module-1

**Introduction and Analysis of Plane Trusses:** Structural forms, Conditions of equilibrium, Compatibility conditions, Degree of freedom, Linear and non linear analysis, Static and kinematic indeterminacies of structural systems, Types of trusses, Assumptions in analysis, Analysis of determinate trusses by method of joints and method of sections.

#### L2,L4,L5

#### **Module-2**

## Sign conventions

**Deflection of Beams:** Definition of slope, Deflection and curvature, Sign conventions, Derivation of moment-curvature equation. Double integration method and Macaulay's method: Slope and deflection for standard loading cases and for determinate prismatic beams subjected to point loads, UDL, UVL and couple.

Moment area method: Derivation, Mohr's theorems, Sign conventions, Application of moment area method for determinate prismatic beams, Beams of varying section, Use of moment diagram by parts.

Conjugate beam method: Real beam and conjugate beam, conjugate beam theorems, Application of conjugate beam method of determinate beams of variable cross sections.

#### Module-3

## L2,L4,L5

**Energy Principles and Energy Theorems:** Principle of virtual displacements, Principle of virtual forces, Strain energy and complimentary energy, Strain energy due to axial force, bending, shear and torsion, Deflection of determinate beams and trusses using total strain energy, Deflection at the

point of application of single load, Castigliano's theorems and its application to estimate the deflections of trusses, bent frames, Special applications-Dummy unit

load method.

#### Module-4

**Arches and Cable Structures:** Three hinged parabolic arches with supports at the same and different levels. Determination of normal thrust, radial shear and bending moment. Analysis of cables under point loads and UDL. Length of cables for supports at same and at different levels- Stiffening trusses for suspension cables.

L2, L4, L5

#### Module-5

**Influence Lines and Moving Loads:** Concepts of influence lines-ILD for reactions, SF and BM for determinate beams-ILD for axial forces in determinate trusses-Reactions, BM and SF in determinate beams using rolling loads concepts.

L2, L4, L6

**Course outcomes:** After studying this course, students will be able to:

- 1. Evaluate the forces i n determinate trusses by method of joints and sections.
- 2. Evaluate the deflection of cantilever, simply supported and overhanging beams by different methods
- 3. Understand the energy principles and energy theorems and its applications to determine the deflections of trusses and bent frames.
- 4. Determine the stress resultants in arches and cables.
- 5. Understand the concept of influence lines and construct the ILD diagram for the moving loads.

**Turbines – Impulse Turbines:** Introduction to turbines, General lay out of a hydroelectric plant, Heads and Efficiencies, classification of turbines. Pelton wheelcomponents, working principle and velocity triangles. Maximum power, efficiency, working proportions – Numerical problems

Module-5Reaction Turbines and Pumps: Radial flow reaction turbines: (i) Francis turbine-<br/>Descriptions, working proportions and design, Numerical problems. (ii) Kaplan<br/>turbine- Descriptions, working proportions and design, Numerical problems. Draft<br/>tube theory and unit quantities. (No problems)<br/>Centrifugal pumps: Components and Working of centrifugal pumps, Types of

Centrifugal pumps: Components and Working of centrifugal pumps, Types of centrifugal pumps, Work done by the impeller, Heads and Efficiencies, Minimum starting speed of centrifugal pump, Numerical problems, Multi-stage pumps.

L1,L2, L3,L4

L1, L2, L3,L4

## **Course outcomes:**

After a successful completion of the course, the student will be able to:

- 1. Apply dimensional analysis to develop mathematical modeling and compute the parametric values in prototype by analyzing the corresponding model parameters
- 2. Design the open channels of various cross sections including economical channel sections
- 3. Apply Energy concepts to flow in open channel sections, Calculate Energy dissipation,
- 4. Compute water surface profiles at different conditions
- 5. Design turbines for the given data, and to know their operation characteristics under different operating conditions

## **Text Books:**

Credits – 04

**Course objectives:** This course will enable students to:

- 1. Recognize the importance of material characteristics and their contributions to strength development in Concrete
- 2. Proportion ingredients of Concrete to arrive at most desirable mechanical properties of Concrete.
- 3. Ascertain and measure engineering properties of concrete in fresh and hardened state which meet the requirement of real time structures.

#### Module-1

#### **Concrete Ingredients**

Fresh Concrete

Cement – Cement manufacturing process, steps to reduce carbon footprint, chemical composition and their importance, hydration of cement, types of cement. Testing of cement. Fine aggregate: Functions, requirement, Alternatives to River sand, M-sand introduction and manufacturing. Coarse aggregate: Importance of size, shape and texture. Grading and blending of aggregate. Testing on aggregate, requirement. Recycled aggregates Water – qualities of water. Chemical admixtures – plasticizers, accelerators, retarders and air entraining agents. Mineral admixtures – Pozzolanic and cementitious materials, Fly ash, GGBS, silica fumes, Metakaolin and rice husk ash.

L1, L2, L3

#### Module-2

Workability-factors affecting workability. Measurement of workability-slump, Compaction factor and Vee-Bee Consistometer tests, flow tests. Segregation and bleeding. Process of manufacturing of concrete- Batching, Mixing, Transporting, Placing and Compaction. Curing – Methods of curing – Water curing, membrane curing, steam curing, accelerated curing, self- curing. Good and Bad practices of making and using fresh concrete and Effect of heat of hydration during mass concreting at project sites.

L1, L2, L3

Module-3

**Hardened Concrete** Factors influencing strength, W/C ratio, gel/space ratio, Maturity concept, Testing of hardened concrete, Creep –facto rs affecting creep. Shrinkage of concrete – plastic shrinking and drying shrinkage, Factors affecting shrinkage. Definition and significance of durability. Internal and external factors influencing durability, Mechanisms- Sulphate attack – chloride attack, carbonation, freezing and thawing. Corrosion, Durability requirements as per

IS-456, In situ testing of concrete- Penetration and pull out test, rebound hammer test, ultrasonic pulse velocity, core extraction – Principal, applications and limitations.

L1, L2, L3

#### Module-4

#### **Concrete Mix Proportioning**

Concept of Mix Design with and without admixtures, variables in proportioning and Exposure conditions, Selection criteria of ingredients used for mix design, Procedure of mix proportioning. Numerical Examples of Mix Proportioning using IS-10262

L1, L2, L3, L4

#### Module-5

#### **Special Concretes**

RMC- manufacture and requirement as per QCI-RMCPCS, properties, advantages and disadvantages. Self-Compacting concrete- concept, materials, tests, properties, application and typical mix Fiber reinforced concrete - Fibers types, properties, application of FRC. Light weight concrete-material properties and types. Typical light weight concrete mix and aplications

L1, L2, L3 L4

# Course outcomes:

After studying this course, students will be able to:

- **1.** Relate material characteristics and their influence on microstructure of concrete.
- **2.** Distinguish concrete behaviour based on its fresh and hardened properties.
- **3.** Illustrate proportioning of different types of concrete mixes for required fresh and hardened properties using professional codes.

#### **Text Books:**

Unconfined flow, phreatic line (Casagrande's method –with and without toe filter), flow through dams, design of dam filters.

**Effective Stress Analysis**: Geostatic stresses, Effective stress concept-total stress, effective

stress and Neutral stress and impact of the effective stress in construction of structures, quick sand phenomena

L1, L2, L3

#### Module-4

#### **Consolidation of Soil:**

Definition, Mass-spring analogy, Terzaghi's one dimensional consolidation theory assumption and limitations. Derivation of Governing differential Equation Preconsolidation pressure and its determination by Casagrande's method. Over consolidation ratio, normally consolidated, under

consolidated and over consolidated soils. Consolidation characteristics of soil (Cc, av, mv and Cv. Laboratory one dimensional consolidation test, characteristics of e-log( $\sigma$ ) curve, Determination of consolidation characteristics of soils compression index and coefficient of consolidation (square root of time fitting method, logarithmic time fitting method). Primary and secondary consolidation.

#### L1, L2, L3,

#### L4Module-5

#### Shear Strength of Soil:

Concept of shear strength, Mohr–Coulomb Failure Criterion, Modified Mohr–Coulomb Criterion

Concept of pore pressure, Total and effective shear strength parameters, factors affecting shear strength of soils. Thixotrophy and sensitivity, Measurement of shear strength parameters - Direct shear test, unconfined compression test, triaxial compression test and field Vane shear test, Test under different drainage conditions. Total and effective stress paths.

L2, L3

#### Course outcomes:

On the completion of this course students are expected to attain the following outcomes;

- 1. Will acquire an understanding of the procedures to determine index properties of any type of soil, classify the soil based on its index properties
- 2. Will be able to determine compaction characteristics of soil and apply that knowledge to assess field compaction procedures
- 3. Will be able to determine permeability property of soils and acquires conceptual knowledge about stresses due to seepage and effective stress; Also acquire ability to estimate seepage losses across hydraulic structure
- 4. Will be able to estimate shear strength parameters of different types of soils using the data of different shear tests and comprehend Mohr-Coulomb failure theory.
- 5. Ability to solve practical problems related to estimation of consolidation settlement of soil deposits also time required for the same.

| Hours/Week      |                          |            |    |
| Total Number of | 50 (10 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   |                          |            |    |

Credits – 04

**Course Objectives:** This course will enable students to:

1. Apply geometric principles to arrive at solutions to surveying problems.

2. Analyze spatial data using appropriate computational and analytical techniques.

3. Design proper types of curves for deviating type of alignments.

4. Use the concepts of advanced data capturing methods necessary for engineering practice

Module-1

#### **Curve Surveying**

Curves – Necessity – Types, Simple curves, Elements, Designation of curves, Setting out simple curves by linear methods (numerical problems on offsets from long chord & chord produced method), Setting out curves by Rankines deflection angle method (numerical problems). Compound curves, Elements, Design of compound curves, Setting out of compound curves (numerical problems). Reverse curve between two parallel straights (numerical problems on Equal radius and unequal radius). Transition curves Characteristics, numerical problems on Length of Transition curve, Vertical curves –Types – (theory).

#### L1,L3,L5

#### Module-2

Geodetic Surveying and Theory of Errors

Geodetic Surveying: Principle and Classification of triangulation system, Selection of base line and

stations, Orders of triangulation, Triangulation figures, Reduction to Centre, Selection and marking of stations Theory of Errors: Introduction, types of errors, definitions, laws of accidental errors, laws of weights, theory of least squares, rules for giving weights and distribution of errors to the field observations, determination of the most probable values of quantities.

L1,L2, L3

#### **Module-3**

Introduction to Field Astronomy: Earth, celestial sphere, earth and celestial coordinate

systems, spherical triangle, astronomical triangle, Napier's rule

27

#### Module-4

#### **Aerial Photogrammetry**

Introduction, Uses, Aerial photographs, Definitions, Scale of vertical and tilted photograph (simple

problems), Ground Co-ordinates (simple problems), Relief Displacements (Derivation), Ground control, Procedure of aerial survey, overlaps and mosaics, Stereoscopes, Derivation Parallax

#### L2,L3, L5

#### Module-5

#### **Modern Surveying Instruments**

Introduction, Electromagnetic spectrum, Electromagnetic distance measurement, Total station,

Lidar scanners for topographical survey. Remote Sensing: Introduction, Principles of energy interaction in atmosphere and earth surface features, Image interpretation techniques, visual interpretation. Digital image processing, Global Positioning system Geographical Information System: Definition of GIS, Key Components of GIS, Functions of GIS, Spatial data, spatial information system Geospatial analysis, Integration of Remote sensing and GIS and Applications in Civil Engineering(transportation, town planning).

L2,L3, L5

**Course outcomes:** After a successful completion of the course, the student will be able to:

1. Apply the knowledge of geometric principles to arrive at surveying problems

2. Use modern instruments to obtain geo-spatial data and analyse the same to appropriate engineering problems.

3. Capture geodetic data to process and perform analysis for survey problems with the use of electronic instruments;

4. Design and implement the different types of curves for deviating type of alignments.

#### **Course outcomes:**

Duringthiscourse, students will develop expertise in;

- 1. Identifying the minerals and rocks and utilize them effectively in civil engineering practices
  - 2. Understanding and interpreting the geological conditions of the area for the implementationofcivilengineeringprojects.
  - 3. Interpreting subsurfaceinformationsuchasthickness of soil, weathered zone, depthof hardrockandsaturated zone by using geophysical methods.
  - 4. Thetechniquesofdrawingthecurvesofelectricalresistivitydataanditsinterpretationfor geotechnicalandaquiferboundaries

#### ProgramObjectives(asperNBA):

oEngineeringKnowledge.

oProblemAnalysis.

oDesign/developmentofsolutions(partly).

oInterpretationofdata.

# Questionpaperpattern: Questionpaper should be set for 100 marks

Allareindividualexperiments

Instructions asprinted onthe coverpage of answer scriptfor splitup of markstobe strictly followed. All exercises are to be included for practical examination.

| Question PaperPattern |  |            |

VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM CHOICE BASED CREDIT SYSTEM (CBCS) CIVIL ENGINEERING BOARD <u>BE-CBCS SYLLABUS 2017-18 Scheme</u>

# 5<sup>th</sup> Semester

#### VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM CHOICE BASED CREDIT SYSTEM (CBCS) CIVIL ENGINEERING BOARD BE-CBCS SYLLABUS 2017-18 Scheme

#### TITLE OF THE COURSE: DESIGN OF RC STRUCTURAL ELEMENTS **B.E.**, V Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme] **Course Code** 17CV51 **CIE Marks** 40 Number of SEE Marks 60 04 Lecture Hours/Week Total Number of 50 (10 Hours per Module) Exam Hours 03 Lecture Hours Credits – 04 Course objectives: This course will enable students to 1. Identify, formulate and solve engineering problems of RC elements subjected to different kinds of loading. 2. Follow a procedural knowledge in designing various structural RC elements. 3. Impart the culture of following the codes for strength, serviceability and durability as an ethics. 4. Provide knowledge in analysis and design of RC elements for the success in competitive examinations. Module-1 Introduction to Limit State Design and Serviceability: Introduction to working stress method, Difference between Working stress and Limit State Method of design, Modular Ratio and Factor of Safety. Philosophy and principle of limit state design with assumptions. Partial Safety factors, Characteristic load and strength. Stress block parameters, concept of balanced section, under reinforced and over reinforced section. Limiting deflection, short term deflection, long term deflection, Calculation of deflection of singly reinforced beam only. Cracking in reinforced concrete members, calculation of crack width of singly reinforced beam. Side face reinforcement, slender limits of beams for stability. L1, L2 Module-2 Limit State Analysis of Beams: Analysis of singly reinforced, doubly reinforced and flanged beams for flexure and shear L2. L4 Module-3 Limit State Design of Beams: Design of singly and doubly reinforced beams, Design of flanged beams for shear, design for combined bending and torsion as per IS-456 L2, L4 Module-4 Limit State Design of Slabs and Stairs: Introduction to one way and two way slabs, Design of cantilever, simply supported and one way continuous slab. Design of two way slabs for different boundary conditions. Design of dog legged and open well staircases. Importance of bond, anchorage length and lap length. L2, L4 Module-5

**Limit State Deign of Columns and Footings:** Analysis and design of short axially loaded RC column. Design of columns with uniaxial and biaxial moments, Design

concepts of the footings. Design of Rectangular and square column footings with axial load and also for axial load & moment

<u>L2, L4</u>

**Course outcomes:** After studying this course, students will be able to:

- 1. understand the design philosophy and principles
- 2. solve engineering problems of RC elements subjected to flexure, shear and torsion
- 3. demonstrate the procedural knowledge in designs of RC structural elements such as slabs, columns and footings
- 4. owns professional and ethical responsibility
- The designs are as per IS-456 and SP (16) relevant charts to be provided in the question paper

#### TITLE OF THE COURSE: ANALYSIS OF INDETERMINATE STRUCTURES B.E., V Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code     | 17CV52                   | CIE Marks  | 40 |
|-----------------|--------------------------|------------|----|
| Number of       | 04                       | SEE Marks  | 60 |
| Lecture         |                          |            |    |
| Hours/Week      |                          |            |    |
| Total Number of | 50 (10 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   |                          |            |    |
|                 | Credits – 04             |            |    |

Course Objectives: This course will enable students to

- 1. Apply knowledge of mathematics and engineering in calculating slope, deflection, bending moment and shear force using slope deflection, moment distribution method and Kani's method.
- 2. Identify, formulate and solve problems in structural analysis.
- 3. Analyze structural system and interpret data.
- 4. use the techniques, such as stiffness and flexibility methods to solve engineering problems
- 5. communicate effectively in design of structural elements

#### Module-1

**Slope Deflection Method:** Introduction, sign convention, development of slope deflection equation, analysis of continuous beams including settlements, Analysis of orthogonal rigid plane frames including sway frames with kinematic indeterminacy<3

#### Module-2

Moment Distribution Method: Introduction, Definition of terms, Development of method, Analysis of continuous beams with support yielding, Analysis of 08 Hours orthogonal rigid plane frames including sway frames with kinematic indeterminacy ≤3 L2, L4,L5

#### Module-3

**Kani's Method:** Introduction, Concept, Relationships between bending moment and deformations, Analysis of continuous beams with and without settlements, Analysis of frames with and without sway

L2, L4,L5

L2, L4, L5

#### Module-4

**Matrix Method of Analysis ( Flexibility Method) :** Introduction, Axes and coordinates, Flexibility matrix, Analysis of continuous beams and plane trusses using system approach, Analysis of simple orthogonal rigid frames using system approach with static indeterminacy  $\leq 3$ 

#### Module-5

**Matrix Method of Analysis (Stiffness Method):** Introduction, Stiffness matrix, Analysis of continuous beams and plane trusses using system approach, Analysis of simple orthogonal rigid frames using system approach with kinematic indeterminacy  $\leq 3$ 

L2, L4,L5

L2, L4,L5

**Course outcomes:** After studying this course, students will be able to:

- 1. Determine the moment in indeterminate beams and frames having variable moment of inertia and subsidence using slope defection method
- 2. Determine the moment in indeterminate beams and frames of no sway and sway using moment distribution method.
- 3. Construct the bending moment diagram for beams and frames by Kani's method.
- 4. Construct the bending moment diagram for beams and frames using flexibility

method

5. Analyze the beams and indeterminate frames by system stiffness method.

Module-5

Pile Foundations: Types and classification of piles, single loaded pile capacity in

cohesionless and cohesive soils by static formula, efficiency of file group, group capacity of piles in cohesionless and cohesive soils, negative skin friction, pile load tests, Settlement of piles, under reamed piles (only introductory concepts – no derivation)

L1, L2, L3 L4

**Course outcomes:** On the completion of this course students are expected to attain the following outcomes;

- 1. Ability to plan and execute geotechnical site investigation program for different civil engineering projects
- 2. Understanding of stress distribution and resulting settlement beneath the loaded footings on sand and clayey soils
- 3. Ability to estimate factor of safety against failure of slopes and to compute lateral pressure distribution behind earth retaining structures
- 4. Ability to determine bearing capacity of soil and achieve proficiency in proportioning shallow isolated and combined footings for uniform bearing pressure
- 5. Capable of estimating load carrying capacity of single and group of piles

| <b>Total Number of</b> | 50                               | Exam Hours       | 03 |
| Lecture Hours          |                                  |                  |    |
|                        | Credits – 04                     |                  |    |

Course Objectives: Provide students with a basic understanding

- 1. Achieve skill sets to prepare computer aided engineering drawings
- 2. Understand the details of construction of different building elements.
- 3. Visualize the completed form of the building and the intricacies of construction based on the engineering drawings.

#### Module-1

**Drawing Basics:** Selection of scales for various drawings, thickness of lines, dimensioning, abbreviations and conventional representations as per IS: 962 Simple engineering drawings with CAD drawing tools : Lines, Circle,Arc, Polyline, Multiline, Polygon, Rectangle, Spline, Ellipse, Modify tools: Erase, Copy, Mirror, Offset, Array, Move, Rotate, Scale, Stretch, Lengthen, Trim, Extend, Break, Chamfer and Fillet, Using Text: Single line text, Multiline text, Spelling, Edit text, Special Features: View tools, Layers concept, Dimension tools, Hatching, Customising toolbars, Working with multiple drawings

12 Hours **L1,L2** 

#### Module-2

#### Drawings Related to Different Building Elements:

Following drawings are to be prepared for the data given using CAD Software

- a. Cross section of Foundation, masonry wall, RCC columns with isolated & combined footings.
- b. Different types of bonds in brick masonry
- c. Different types of staircases Dog legged, Open well
- d. Lintel and chajja
- e. RCC slabs and beams
- f. Cross section of a pavement
- g. Septic Tank and sedimentation Tank
- h. Layout plan of Rainwater recharging and harvesting system
- i. Cross sectional details of a road for a Residential area with provision for all services
- j. Steel truss (connections Bolted)

Note: Students should sketch to dimension the above in a sketch book before doing the computer drawing

12 Hours **L2,L3,L4,L5,L6** 

#### Module-3

**Building Drawings:** Principles of planning, Planning regulations and building byelaws, factors affecting site selection, Functional planning of residential and public buildings, design aspects for different public buildings. Recommendations of NBC.

Drawing of Plan, elevation and sectional elevation including electrical, plumbing and sanitary services *using CAD software* for:

- 1. Single and Double story residential building
- 2. Hostel building
- 3. Hospital building
- 4. School building
- 5. Submission drawing (sanction drawing) of two storied residential building with access to terrace including all details and statements as per the local bye-laws

#### Note:

- Students should sketch to dimension the above in a sketch book before doing the computer drawing
- One compulsory field visit/exercise to be carried out.
- Single line diagrams to be given in the examination

26 Hours L2,L3, L4, L5, L6

Course outcomes: After studying this course, students will be able to

- 1. Gain a broad understanding of planning and designing of buildings
- 2. Prepare, read and interpret the drawings in a professional set up.
- 3. Know the procedures of submission of drawings and Develop working and submission drawings for building
- 4. Plan and design a residential or public building as per the given requirements

# Question paper pattern:

- There will be two full questions with sub divisions if necessary from Module 2 with each full question carrying *thirty* marks. Students have to answer one question.
- There will be two full questions from Module 3 with each full question carrying *fifty* marks. Students have to answer one question.
- The conduction of examination and question paper format of should be in lines of 1st year CAED drawing. It's a drawing paper but the exam will be conducted by batches in the computer labs. question papers should be given in batches

|                         | 03         | 03 SEE Marks |

Credits – 03

**Course Objectives:** This course will enable students to

- 1. Understand the history and development, role of railways, railway planning and development based on essential criteria's.
- 2. Learn different types of structural components, engineering properties of the materials, to calculate the material quantities required for construction
- 3. Understand various aspects of geometric elements, points and crossings, significance of maintenance of tracks.
- 4. Design and plan airport layout, design facilities required for runway, taxiway and impart knowledge about visual aids
- 5. Apply design features of tunnels, harbours, dock and necessary navigational aids; also expose them to various methods of tunneling and tunnel accessories.

#### Module-1

**Railway Planning:** Significance of Road, Rail, Air and Water transports – Coordination of all modes to achieve sustainability – Elements of permanent way – Rails, Sleepers, Ballast, rail fixtures and fastenings, – Track Stress, coning of wheels, creep in rails, defects in rails – Route alignment surveys, conventional and modern methods- – Soil suitability analysis – Geometric design of railways, gradient, super elevation, widening of gauge on curves- Points and Crossings.

#### Module-2

**Railway Construction and Maintenance:** Earthwork – Stabilization of track on poor soil, Calculation of Materials required for track laying – Construction and maintenance of tracks – Modern methods of construct ion & maintenance – Railway stations and yards and passenger amenities- Urban rail – Infrastructure for Metro, Mono and underground railways.

#### L1,L2,L3

L1.L2

#### Module-3

**Harbour and Tunnel Engineering:** Definition of Basic Terms: Planning and Design of Harbours: Requirements, Classification, Location and Design

Principles – Harbour Layout and Terminal Facilities, Coastal Structures, Inland Water Transport – Wave action on Coastal Structures and Coastal Protection Works.

Tunneling: Introduction, size and shape of the tunnel, tunneling methods in soils, tunnel lining, tunnel drainage and ventilation.

L2,L3,L4

#### Module-4

**Airport Planning:** Air transport characteristics, airport classification, air port planning: objectives, components, layout characteristics, and socioeconomic characteristics of the catchment area, criteria for airport site selection and ICAO stipulations, typical airport layouts, Parking and circulation area.

#### Module-5

**Airport Design:** Runway Design: Orientation, Wind Rose Diagram, Runway length, Problems on basic and Actual Length, Geometric design of runways, Configuration and Pavement Design Principles, Elements of Taxiway Design, Airport Zones, Passenger Facilities and Services, Runway and Taxiway Markings and lighting.

L3,L4,L5,L6

#### **Course outcomes:** After studying this course, students will be able to:

- 1. Acquires capability of choosing alignment and also design geometric aspects of railway system, runway and taxiway.
- 2. Suggest and estimate the material quantity required for laying a railway track and also will be able to determine the hauling capacity of a locomotive.
- 3. Develop layout plan of airport, harbor, dock and will be able relate the gained knowledge to identify required type of visual and/or navigational aids for the same.
- 4. Apply the knowledge gained to conduct surveying, understand the tunneling activities.

#### Text Books:

- 1. Saxena Subhash C and Satyapal Arora, "A Course in Railway Engineering", Dhanpat Rai and Sons, Delhi.
- 2. Satish Chandra and Agarwal M.M, "Railway Engineering", 2nd Edition, Oxford University Press, New Delhi.
- 3. Khanna S K, Arora M G and Jain S S, "Airport Planni ng and Design", Nemchand and Brothers, Roorkee,

- 2. Mundrey J.S. "A course in Railway Track Engineering". Tata McGraw Hill
- 3. Srinivasan R. Harbour, "Dock and Tunnel Engineering", 26th Edition 2013

#### TITLE OF THE COURSE: MASONRY STRUCTURES B.E., V Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code     | 17 CV553                | CIE Marks  | 40 |
|-----------------|-------------------------|------------|----|
| Number of       | 03                      | SEE Marks  | 60 |
| Lecture         |                         |            |    |
| Hours/Week      |                         |            |    |
| Total Number of | 40 (8 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   | /                       |            |    |
|                 | Credits – 03            |            | •  |

Course Objectives: This course will enable students to

- 1. Understand properties of masonry units, strength and factors affecting strength.
- 2. Understand design criteria of various types of wall subjected to different load system.
- 3. Impart the culture of following the codes for strength, serviceability and durability as an ethics.
- 4. Provide knowledge in analysis and design of masonry elements for the success in competitive examinations.

#### Module-1

**Masonry Units, Materials, types and masonry construction**: Bricks, Stone and Block masonry units- strength, modulus of elasticity and water absorption of masonry materials – classification and properties o f mortars. Defects and Errors in masonry construction – cracks in masonry, types, reason for cracking, methods of avoiding cracks.

**Strength and Stability:** Strength and stability of axially loaded masonry walls, effect of unit strength, mortar strength, joint thickness, rate of absorption, effect of curing, effect of ageing, workmanship. Compressive strength formulae based on elastic theory and empirical formulae.

#### Module-2

**Permissible stresses:** Types of walls, permissible compressive stress, stress reduction and shape modification factors, increase in permissible stresses for eccentric vertical and lateral load, permissible tensile stress and shear stresses.

**Design Considerations:** Effective height of walls and columns, openings in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action in lintels. Problems on design considerations for solid walls, cavity walls, wall with pillars.

#### L1,L2,L3

L1,L2,L3

L1,L2,L3

Module-3

**Load considerations and design of Masonry subjected to axial loads:** Design criteria, design examples of walls under UDL, solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers.

#### Module-4

**Design of walls subjected to concentrated axial loads:** Solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers, design of wall with openings.

**Design of walls subjected to eccentric loads:** Design criteria – stress distribution under eccentric loads – problems on eccentrically loaded solid walls, cavity walls, walls with piers.

L2,L3,L4,L5

#### Module-5

**Design of Laterally and transversely loaded walls:** Design criteria, design of solid wall under wind loading, design of shear wall – design of compound walls. Introduction to reinforced brick masonry, lintels and slabs.

In-filled frames: Types – modes of failures – design criteria of masonry retaining walls.

L2,L3,L4,L5

**Course outcomes:** After studying this course, students will be able to:

- 1. Explain engineering properties and uses of masonry units, defects and crack in masonry and its remedial measures.
- 2. Summarize various formulae's for finding compressive strength of masonry units.
- 3. Explain permissible stresses and design criteria as per IS: 1905 and SP-20.
- 4. Design different types of masonry walls for different load considerations.

#### **Text Books:**

- 1. Henry, A.W., "Structural Masonry", Macmillan Education Ltd., 1990.
- 2. Dayaratnam P, "Brick and Reinforced Brick Structures", Oxford & IBH, 1987.
- 3. M. L. Gambhir, "Building and Construction Materials", Mc Graw Hill education Pvt. Ltd.

- 1. IS 1905–1987 "Code of practice for structural use o f un-reinforced masonry- (3rd revision) BIS, New Delhi.
- 2. SP 20 (S&T) 1991, "Hand book on masonry design and construction (1<sup>st</sup> revision) BIS, New Delhi.

#### TITLE OF THE COURSE: THEORY OF ELASTICITY B.E., V Semester, Civil Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code              | 17 CV554                            | CIE Marks              | 40     |
|--------------------------|-------------------------------------|------------------------|--------|
| Number of                | 03                                  | SEE Marks              | 60     |
| Lecture                  |                                     |                        |        |
| Hours/Week               |                                     |                        |        |
| Total Number of          | 40 (8 Hours per Module)             | Exam Hours             | 03     |
| Lecture Hours            |                                     |                        |        |
|                          | Credits – 03                        |                        |        |
| <b>Course Objectives</b> | This course will enable students t  | 0                      |        |
| 1. This course adv       | ances students from the one-dime    | nsional and linear pro | blems  |
| conventionally           | treated in courses of strength of n | naterials into more ge | neral, |
| two and three-d          | imensional problems.                | -                      |        |
|                          |                                     |                        |        |

- 2. The student will be introduced to rectangular and polar coordinate systems to describe stress and strain of a continuous body.
- 3. Introduction to the stress strain relationship, basic principles and mathematical expressions involved in continuum mechanics. also solution of problems in 2- dimensional linear elasticity

#### Module-1

Module-2

Concepts of continuum, Stress at a point, Components of stress, Differential equations of equilibrium, Stress transformation, Principal stresses, Maximum shear stress, Stress invariants.

Strain at a point, Infinitesimal strain, Strain-displacement relations, Components of strain, Compatibility Equations, Strain transformation, Principal strains, Strain invariants, Measurement of surface strains, strain rosettes

L1,L2,L3

# Generalized Hooke's Law, Stress-strain relationships, Equilibrium equations in terms of displacements and Compatibility equations in terms of stresses, Plane stress and plane strain problems, St. Venant's principle, Principle of superposition, Uniqueness theorem, Airy's stress function, Stress polynomials (Two Dimensional cases only).

#### L1,L2,L3

# Module-3

Generalized Hooke's Law, Stress-strain relationships, Equilibrium equations in terms of displacements and Compatibility equations in terms of stresses, Plane stress and plane strain problems, St. Venant's principle, Principle of superposition, Uniqueness theorem, Airy's stress function, Stress polynomials (Two Dimensional cases only). equations of equilibrium, compatibility equation, stress function.

# Module-4

Axisymmetric stress distribution - Rotating discs, Lame's equation for thick cylinder, Effect of circular hole on stress distribution in plates subjected to tension, compression and shear, stress concentration factor.

L3,L4

L3,L4

#### Module-5

Torsion: Inverse and Semi-inverse methods, stress function, torsion of circular, elliptical, triangular sections

L3,L4

**Course outcomes:** After studying this course, students will be able to:

- 1. Ability to apply knowledge of mechanics and mathematics to model elastic bodies as continuum
- 2. Ability to formulate boundary value problems; and calculate stresses and strains
- 3. Ability to comprehend constitutive relations for elastic solids and compatibility constraints;
- 4. Ability to solve two-dimensional problems (plane stress and plane strain) using the concept of stress function.

**Traffic Management:** Area Traffic Management System, Traffic System Management (TSM) with IRC standards, Traffic Regulatory Measures, Travel Demand Management (TDM), Direct and indirect methods, Congestion and parking pricing, All segregation methods- Coordination among different agencies, Intelligent Transport System for traffic management, enforcement and education.

L1,L2,L3,L4

**Course outcomes:** After studying this course, students will be able to:

- 1. Understand the human factors and vehicular factors in traffic engineering design.
- 2. Conduct different types of traffic surveys and analysis of collected data using statistical concepts.
- 3. Use an appropriate traffic flow theory and to comprehend the capacity & signalized intersection analysis.
- 4. Understand the basic knowledge of Intelligent Transportation System.

Credits – 03

**Course Objectives:** This course will enable students to

- 1. Learn about the principles, indicators and general concept of sustainability.
- 2. Apprehend the local, regional and global impacts of unsustainable designs, products and processes.
- 3. Student shall be able to apply the sustainability concepts in engineering
- 4. Know built environment frameworks and their use
- 5. Understand how building and design is judged and valued by clients and stakeholders and how to implement sustainability.

#### Module-1

**Introduction:** Sustainability - Introduction, Need and concept of sustainability, Social-environmental and economic sustainability concepts. Sustainable development, Nexus between Technology and Sustainable development, Challenges for Sustainable Development. Multilateral environmental agreements and Protocols - Clean Development Mechanism (CDM), Environmental legislations in India - Water Act, Air Act

L1,L2,L3

#### Module-2

**Global Environmental Issue:** Resource degradation, Climate change, Regional and Local Environmental Issues. Carbon credits and carbon trading, carbon foot print Carbon sequestration – Carbon capture and storage (CCS). Environmental management standards, ISO 14000 series, Life Cycle Analysis (LCA) - Scope and Goal, Bio-mimicking

#### L1,L2,L3

#### Module-3

**Sustainable Design:** Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design- Passive solar design technique, Thermal storage, Cooling strategies, high performance insulation. Sustainable cities, Sustainable transport.

#### L1,L2,L3,L4

#### Module-4

**Clean Technology and Energy:** Energy sources: Basic concepts-Conventional and non-conventional, solar energy, Fuel cells, Wind energy, Small hydro plants, bio-fuels, Energy derived from oceans, Geothermal energy. Rainwater harvesting.

L1,L2,L3

#### Module-5

**Green Engineering:** Green Engineering concepts, Sustainable Urbanization, industrialization and poverty reduction; Social and technological change, Industrial Processes: Material selection, Pollution Prevention, Industrial Ecology, Industrial symbiosis

**Course outcomes:** After studying this course, students will be able to:

- 1. Learn the sustainability concepts; understand the role and responsibility of engineers in sustainable development.
- 2. Quantify sustainability, and resource availability, Rationalize the sustainability based on scientific merits.
- 3. Understand and apply sustainability concepts in construction practices, designs, product developments and processes across various engineering disciplines.
- 5. Make a decision in applying green engineering concepts and become a lifelong advocate of sustainability in society.

| Lecture         |                         |            |    |
| Hours/Week      |                         |            |    |
| Total Number of | 40 (8 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   |                         |            |    |
|                 | Credits – 03            | •          | •  |

**Course Objectives:** This course will enable students to

- 1. Understand the basic concepts of remote sensing.
- 2. Analyze satellite imagery and extract the required units.
- 3. Extract the GIS data and prepare the thematic maps.
- 4. Use the thematic maps for various applications.

#### Module-1

Remote Sensing: Basic concept of Remote sensing, Data and Information, Remote sensing data collection, Remote sensing advantages & Limitations, Remote Sensing process. Electromagnetic Spectrum, Energy interactions with atmosphere and with earth surface features (soil, water, and vegetation), Resolution, image registration and Image and False color composite, elements of visual interpretation techniques.

#### Module-2

Remote Sensing Platforms and Sensors: Indian Satellites and Sensors characteristics, Remote Sensing Platforms, Sensors and Properties of Digital Data, Data Formats: Introduction, platforms- IRS, Landsat, SPOT, Cartosat, Ikonos, Envisat etc. sensors, sensor resolutions (spatial, spectral, radiometric and temporal). Basics of digital image processing- introduction to digital data, systematic errors(Scan Skew, Mirror-Scan Velocity, Panoramic Distortion, Platform Velocity , Earth Rotation) and non-systematic [random] errors(Altitude, Attitude), Image enhancements(Gray Level Thresholding, level slicing, contrast stretching),image filtering.

#### L2,L3,L4

L1,L2,L3

#### Module-3

Geographic Information System: Introduction to GIS; components of a GIS; Geographically Referenced Data, Spatial Data- Attribute data-Joining Spatial and attribute data, GIS Operations: Spatial Data Input – Attribute data Management, Geographic coordinate System, Datum; Map Projections: Types of Map Projections, Projected coordinate Systems. UTM Zones.

#### Module-4

Data Models: Vector data model: Representation of simple features – Topology and its importance; coverage and its data structure, Shape file; Relational Database, Raster Data Model: Elements of the Raster data model, Types of Raster Data, Raster Data Structure, Data conversion.

#### L3,L4,L5

L2,L3,L4

#### Module-5

Integrated Applications of Remote sensing and GIS: Applications in land use land cover analysis, change detection, water resources, urban planning, environmental planning, Natural resource management and Traffic management. Location Based Services And Its Applications.

- **Course outcomes:** After studying this course, students will be able to:
- 1. Collect data and delineate various elements from the satellite imagery using their spectral signature.
- 2. Analyze different features of ground information to create raster or vector data.
- 3. Perform digital classification and create different thematic maps for solving specific problems
- 4. Make decision based on the GIS analysis on thematic maps.

| Total Number of | 40 (8 Hours per Module) | Exam Hours | 03 |
| Lecture Hours   |                         |            |    |
|                 | 0 ma dita 00            |            |    |

Credits – 03

**Course Objectives:** This course will enable students to

- 1. Gain an historical, economic, and organizational perspective of occupational safety and health;
- 2. Investigate current occupational safety and health problems and solutions.
- 3. Identify the forces that influence occupational safety and health.
- 4. Demonstrate the knowledge and skills needed to identify workplace problems and safe work practice

#### Module-1

Occupational Hazard and Control Principles: Safety, History and development, National Safety Policy. Occupational safety and Health Act (OSHA), Occupational Health and Safety administration - Laws governing OSHA and right to know. Accident – causation, investigation, investigation plan, Methods of acquiring accident facts, Supervisory role in accident investigation

#### L1,L2,L3

#### Module-2

Ergonomics at Work Place: Ergonomics Task analysis, Preventing Ergonomic Hazards, Work space Envelops, Visual Ergonomics, Ergonomic Standards, Ergonomic Programs. Hazard cognition and Analysis, Human Error Analysis – Fault Tree Analysis – Emergency Response - Decision for action – purpose and considerations

#### L2,L3,L4,L5

#### Module-3

Fire Prevention and Protection: Fire Triangle, Fire Development and its severity, Effect of Enclosures, early detection of Fire, Classification of fire and Fire Extinguishers.

Electrical Safety, Product Safety: Technical Requirements of Product safety.

#### Module-4

Health Considerations at Work Place: types of diseases and their spread, Health Emergency. Personal Protective Equipment (PPE) – types and advantages, effects of exposure and treatment for engineering industries, municipal solid waste. Environment management plans (EMP) for safety and sustainability

L2,L3,L4,L5

L2,L3,L4,L5

#### Module-5

Occupational Health and Safety Considerations: Water and wastewater treatment plants, Handling of chemical and safety measures in water and wastewater treatment plants and labs, Construction material manufacturing industries like cement plants, RMC Plants, precast plants and construction sites. Policies, roles and responsibilities of workers, managers and supervisors

L3,L4,L5,L6

**Course outcomes:** After studying this course, students will be able to:

- 1. Identify hazards in the workplace that pose a danger or threat to their safety or health, or that of others.
- 2. Control unsafe or unhealthy hazards and propose methods to eliminate the hazard.
- 3. Present a coherent analysis of a potential safety or health hazard both verbally and in writing, citing the occupational Health and Safety Regulations as well as supported legislation.
- 4. Discuss the role of health and safety in the workplace pertaining to the responsibilities of workers, managers, supervisors.
- 5. Identify the decisions required to maintain protection of the environment, workplace as well as personal health and safety.

|                                      | ing point test                           |                  |           |
|                                      | ic gravity test                          |                  |           |
| -                                    | sity test by tar viscometer              |                  |           |
|                                      | inous Mix Design by Marshall Method (I   | )emonstration    |           |
|                                      |  |                  |           |

- 3. Tests on Soil
  - a. Wet sieve analysis
  - b. CBR test

**Course outcomes:** During this course, students will develop expertise in;

- 1. 1. Conduct appropriate laboratory experiments and interpret the results
- 2. Determine the quality and suitability of cement
- 3. Design appropriate concrete mix
- 4. Determine strength and quality of concrete
- 5. Test the road aggregates and bitumen for their suitability as road material.
- 6. Test the soil for its suitability as sub grade soil for pavements.

#### Question paper pattern:

- All are individual experiments
- Instructions as printed on the cover page of answer script for split up of marks to be strictly followed.
- All exercises are to be included for practical examination.

- 1. 1. M.L.Gambir, "Concrete Manual", Danpat Rai and sons, New Delhi
- 2. Shetty M.S, "Concrete Technology", S. Chand & Co. Ltd, New Delhi.
- 3. Mehta P.K, "Properties of Concrete", Tata McGraw Hill Publications, New Delhi.
- 4. Neville AM, "Properties of Concrete", ELBS Publications, London.
- 5. Relevant BIS codes.
- 6. S K Khanna, C E G Justo and A Veeraragavan, "Highway Materials Testing Laboratory Manual ", Nem Chand Bros, Roorkee
- 7. L R Kadiyali, "Highway Engineering ", Khanna Publishers, New Delhi

## 6<sup>th</sup> Semester

VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM CHOICE BASED CREDIT SYSTEM (CBCS) CIVIL ENGINEERING BOARD <u>BE-CBCS SYLLABUS 2017-18 Scheme</u>

## Course Title: CONSTRUCTION MANAGEMENT AND ENTREPRENEURSHIP As per Choice Based Credit System (CBCS) scheme]

| SEMESTER:VI                   |        |                   |    |  |
|-------------------------------|--------|-------------------|----|--|
| Subject Code                  | 17CV61 | IA Marks          | 40 |  |
| Number of Lecture Hours/Week  | 04     | Exam Marks        | 60 |  |
| Total Number of Lecture Hours | 50     | Exam Hours        | 03 |  |
| CREDITS -04                   |        | Total Marks - 100 | )  |  |

**Course Objectives:** This course will enable students to

1. Understand the concept of planning, scheduling, cost and quality control, safety during construction, organization and use of project information necessary for construction project.

- 2. Inculcate Human values to grow as responsible human beings with proper personality.
- 3. Keep up ethical conduct and discharge professional duties.

#### Module -1

**Management:** Characteristics of management, functions of management, importance and purpose of planning process, types of plans

**Construction Project Formulation:** Introduction to construction management, project organization, management functions, management styles

**Construction Planning and Scheduling:** Introduction, types of project plans, work breakdown structure, Grant Chart, preparation of network diagram- event and activity based and its critical path-critical path method, concept of activity on arrow and activity on node.

#### L1,L2,L3

L1,L2,L3

Module -2

**Resource Management:** Basic concepts of resource management, class of labour, Wages & statutory requirement, Labour Production rate or Productivity, Factors affecting labour output or productivity.

**Construction Equipments:** classification of construction equipment, estimation of productivity for: excavator, dozer, compactors, graders and dumpers. Estimation of ownership cost, operational and maintenance cost of construction equipments. Selection of construction equipment and basic concept on equipment maintenance **Materials:** material management functions, inventory management.

#### Module -3

#### Construction Quality, safety and Human Values:

Construction quality process, inspection, quality control and quality assurance, cost of quality, ISO standards. Introduction to concept of Total Quality Management

**HSE:** Introduction to concepts of HSE as applicable to Construction. Importance of safety in construction, Safety measures to be taken during Excavation, Explosives, drilling and blasting, hot bituminous works, scaffolds / platforms / ladder, form work and equipment operation. Storage of materials. Safety through legislation, safety campaign. Insurances.

**Ethics :** Morals, values and ethics, integrity, trustworthiness, work ethics, need of engineering ethics, Professional Duties, Professional and Individual Rights, Confidential and Proprietary Information, Conflict of Interest Confidentiality, Gifts and Bribes, Price Fixing, Whistle Blowing.

#### L1,L2,L3

#### Module -4

#### Introduction to engineering economy :

Principles of engineering economics, concept on Micro and macro analysis, problem solving and decision making.

**Interest and time value of money:** concept of simple and compound interest, interest formula for: single payment, equal payment and uniform gradient series. Nominal and effective interest rates, deferred annuities, capitalized cost.

**Comparison of alternatives :** Present worth, annual equivalent , capitalized and rate of return methods , Minimum Cost analysis and break even analysis

L1,L2,L3

#### Module -5

**Entrepreneurship:** Evolution of the concept, functions of an entrepreneur, concepts of entrepreneurship, stages in entrepreneurial process, different sources of finance for entrepreneur, central and state level financial institutions.

**Micro, Small & Medium Enterprises (MSME):** definition, characteristics, objectives, scope, role of MSME in economic development, advantages of MSME, Introduction to different schemes: TECKSOK, KIADB, KSSIDC, DIC, Single Window Agency: SISI, NSIC, SIDBI, KSFC

**Business Planning Process:** Business planning process, marketing plan, financial plan, project report and feasibility study, guidelines for preparation of model project report for starting a new venture. Introduction to international entrepreneurship opportunities , entry into international business , exporting , direct foreign investment , venture capital

L1.L2.L3

**Course Outcomes:** After studying this course, students will be able to:

- 1. Understand the construction management process.
- 2. Understand and solve variety of issues that are encountered by every professional in discharging professional duties.
- 3. Fulfill the professional obligations effectively with global outlook

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Text Books:**

- 1. P C Tripathi and P N Reddy, "Principles of Management", Tata McGraw-Hill Education
- 2. Chitkara, K.K, "Construction Project Management: Planning Scheduling and Control", Tata McGraw-Hill Publishing Company, New Delhi.
- 3. Poornima M. Charantimath , "Entrepreneurship Development and Small Business Enterprise", Dorling Kindersley (India) Pvt. Ltd., Licensees of Pearson Education
- 4. Dr. U.K. Shrivastava "Construction Planning and Management", Galgotia publications Pvt. Ltd. New Delhi.
- 5. Bureau of Indian standards IS 7272 (Part-1)- 1974 : Recommendations for labour output constant for building works :

- Robert L Peurifoy, Clifford J. Schexnayder, Aviad Shapira, Robert Schmitt, "Construction Planning, Equipment, and Methods (Civil Engineering), McGraw-Hill Education
- 2. Harold Koontz, Heinz Weihrich, "Essentials of Management: An International, Innovation, and Leadership perspective", T.M.H. Edition, New Delhi
- 3. Frank Harris, Ronald McCaffer with Francis Edum-Fotwe, "Modern Construction Management", Wiley-Blackwell
- 4. Mike Martin, Roland Schinzinger, "Ethics in Engineering", McGraw-Hill Education
- 5. Chris Hendrickson and Tung Au, "Project Management for Construction -Fundamentals Concepts for Owners, Engineers, Architects and Builders", Prentice Hall, Pitsburgh
- 6. James L.Riggs , David D. Bedworth , Sabah U. Randhawa " Engineerng Economics" 4 ed tata Mc Graw hill.
- 7. S.C Sharma "Construction Equipments and its management" Khanna publishers

#### Course Title: DESIGN OF STEEL STRUCTURAL ELEMENTS As per Choice Based Credit System (CBCS) scheme]

| SEMESTER:VI                   |        |                  |    |  |
|-------------------------------|--------|------------------|----|--|
| Subject Code                  | 17CV62 | IA Marks         | 40 |  |
| Number of Lecture Hours/Week  | 04     | Exam Marks       | 60 |  |
| Total Number of Lecture Hours | 50     | Exam Hours       | 03 |  |
| CREDITS -04                   |        | Total Marks- 100 | )  |  |

**Course Objectives:** This course will enable students to

- 1. Understand advantages and disadvantages of steel structures, steel code provisions, and plastic behaviour of structural steel.
- 2. Learn Bolted connections and Welded connections.
- 3. Design of compression members, built-up columns and columns splices.
- 4. Design of tension members, simple slab base and gusseted base.
- 5. Design of laterally supported and un-supported steel beams.

#### Module -1

**Introduction:** Advantages and Disadvantages of Steel Structures, Limit state method Limit State of Strength, Structural Stability, Serviceability Limit states, Failure Criteria of steel, Design Consideration, Loading and load combinations, IS code provisions, Specification and Section classification.

**Plastic Behaviour of Structural Steel:** Introduction, Plastic theory, Plastic Hinge Concept, Plastic collapse load, load factor, Shape factor, Theorem of plastic collapse, Methods of Plastic analysis, Plastic analysis of Continuous Beams.

#### L1,L2,L3

#### Module -2

**Bolted Connections:** Introduction, Types of Bolts, Behaviour of bolted joints, Design of High Strength friction Grip(HSFG) bolts, Design of Simple bolted Connections (Lap and Butt joints)

**Welded Connections:** Introduction, Types and properties of welds, Effective areas of welds, Weld Defects, Simple welded joints for truss member,

Advantages and Disadvantages of Bolted and Welded Connections.

#### L1,L2,L3

#### Module -3

**Design of Compression Members:** Introduction, Failure modes, Behaviour of compression members, Sections used for compression members, Effective length of compression members, Design of compression members and built up Compression members, Design of Laced and Battened Systems.

#### Module -4

**Design of Tension Members:** Introduction, Types of Tension members, Slenderness ratio, Modes of Failure, Factors affecting the strength of tension members, Design of Tension members and Lug angles, Splices, Gussets.

Design of Column Bases: Design of Simple Slab Base and Gusseted Base.

L1,L2,L3

L1,L2,L3

Module -5

**Design of Beams:** Introduction, Beam types, Lateral Stability of beams, factors affecting lateral stability, Behaviour of Beams in Bending, Design strength of laterally supported beams in Bending, Design of Laterally unsupported Beams [No Numerical Problems], Shear Strength of Steel Beams.

Beam to Beam Connections, Beam to Column Connection and Column Splices [No Numerical Problems]

L1,L2,L3

**Course Outcomes:** After studying this course, students will be able to:

- 1. Possess a knowledge of Steel Structures Advantages and Disadvantages of Steel structures, steel code provisions and plastic behaviour of structural steel
- 2. Understand the Concept of Bolted and Welded connections.

- 3. Understand the Concept of Design of compression members, built-up columns and columns splices.
- 4. Understand the Concept of Design of tension members, simple slab base and gusseted base.
- 5. Understand the Concept of Design of laterally supported and un-supported steel beams.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Question Paper Pattern:**

- The question paper will have 5 modules comprising of ten questions. Each full question carrying 16 marks
- There will be two full questions (with a maximum of three subdivisions, if necessary) from each module.
- Each full question shall cover the topics as a module
- The students shall answer five full questions, selecting one full question from each module. If more than one question is answered in modules, best answer will be considered for the award of marks limiting one full question answer in each module.

#### Text Books:

- 1. N Subramanian., "Design of Steel Structures" (2016), Oxford University Press, New Delhi.
- 2. Duggal S K., "Limit State Method of Design of Steel Structures", Tata McGraw Hill, New Delhi

- 1. Dayarathnam P, "Design of Steel Structures", S Chand and Company Ltd., New Delhi.
- 2. Kazim S M A and Jindal R S, "Design of Steel Structures", Prentice Hall of India, New Delhi.
- 3. IS 800-2007: General Construction in Steel Code Practice (Third revision), Bureau of Indian Standards, New Delhi.

#### Course Title: HIGHWAY ENGINEERING As per Choice Based Credit System (CBCS) scheme SEMESTED:VI

| SEWIES I EK; VI               |        |                 |    |  |
|-------------------------------|--------|-----------------|----|--|
| Subject Code                  | 17CV63 | IA Marks        | 40 |  |
| Number of Lecture Hours/Week  | 04     | Exam Marks      | 60 |  |
| Total Number of Lecture Hours | 50     | Exam Hours      | 03 |  |
| CREDITS -04                   |        | Total Marks- 10 | 0  |  |

**Course objectives:** This course will enable students to;

- 1. Gain knowledge of different modes of transportation systems, history, development of highways and the organizations associated with research and development of the same in INDIA.
- 2. Understand Highway planning and development considering the essential criteria's (engineering and financial aspects, regulations and policies, socio economic impact).
- 3. Get insight to different aspects of geometric elements and train them to design geometric elements of a highway network.
- 4. Understand pavement and its components, pavement construction activities and its requirements.
- 5. Gain the skills of evaluating the highway economics by B/C, NPV, IRR methods and also introduce the students to highway financing concepts.

#### Module -1

**Principles of Transportation Engineering:** Importance of transportation, Different modes of transportation and comparison, Characteristics of road transport Jayakar committee recommendations, and implementation – Central Road Fund, Indian Roads Congress, Central Road Research Institute

**Highway Development and Planning:** Road types and classification, road patterns, planning surveys, master plan – saturation system of road planning, phasing road development in India, problems on best alignment among alternate proposals Salient Features of 3rd and 4thtwenty year road development plans and Policies, Present scenario of road development in India (NHDP & PMGSY) and in Karnataka (KSHIP & KRDCL) Road development plan - vision 2021.

#### Module -2

L1,L2

**Highway Alignment and Surveys:** Ideal Alignment, Factors affecting the alignment, Engineering surveys-Map study, Reconnaissance, Preliminary and Final location & detailed survey, Reports and drawings for new and re-aligned projects

**Highway Geometric Design:** Cross sectional elements-width, surface, camber, Sight distances-SSD, OSD, ISD, HSD, Design of horizontal and vertical alignment-curves, super-elevation, widening, gradients, summit and valley curves

#### Module -3

L2,L3,L4

**Pavement Materials:** Subgrade soil - desirable properties-HRB soil classificationdetermination of CBR and modulus of subgrade reaction with Problems Aggregates-Desirable properties and tests, Bituminous materials-Explanation on Tar, bitumen, cutback and emulsion-tests on bituminous material

**Pavement Design:** Pavement types, component parts of flexible and rigid pavements and their functions, ESWL and its determination (Graphical method only)-Examples

L3,L4,L5

#### Module -4

**Pavement Construction:** Design of soil aggregate mixes by Rothfuch's method.

Uses and properties of bituminous mixes and cement concrete in pavement construction.

Earthwork; cutting and Filling, Preparation of subgrade, Specification and construction of i) Granular Sub base, ii) WBM Base, iii) WMM base, iv) Bituminous Macadam, v) Dense Bituminous Macadam vi) Bituminous Concrete, vii) Dry Lean Concrete sub base and PQC viii) concrete roads Module -5

**Highway Drainage:** Significance and requirements, Surface drainage system and design-Examples, sub surface drainage system, design of filter materials, Types of cross drainage structures, their choice and location

**Highway Economics:** Highway user benefits, VOC using charts only-Examples, Economic analysis - annual cost method-Benefit Cost Ratio method-NPV-IRR methods-Examples, Highway financing-BOT-BOOT concepts

L1,L2,L3

- Course outcomes: After studying this course, students will be able to:1. Acquire the capability of proposing a new alignment or re-alignment of existing roads, conduct necessary field investigation for generation of required data.
- 2. Evaluate the engineering properties of the materials and suggest the suitability of the same for pavement construction.
- 3. Design road geometrics, structural components of pavement and drainage.
- 4. Evaluate the highway economics by few select methods and also will have a basic knowledge of various highway financing concepts.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis

#### • Interpretation of data

#### **Text Books:**

- 1. S K Khanna and C E G Justo, "Highway Engineering", Nem Chand Bros, Roorkee
- 2. L R Kadiyali, "Highway Engineering", Khanna Publishers, New Delhi.
- 3. R Srinivasa Kumar, "Highway Engineering", University Press.
- 4. K.P.subramanium, "Transportation Engineering", SciTech Publications, Chennai.

- 1. Relevant IRC Codes
- 2. Specifications for Roads and Bridges-MoRT&H, IRC, New Delhi.
- 3. C. JotinKhisty, B. Kentlal, "Transportation Engineering", PHI Learning Pvt. Ltd. New Delhi.

#### Course Title: WATER SUPPLY AND TREATMENT ENGINEERING As per Choice Based Credit System (CBCS) scheme] SEMESTER:VI

| SEMIESIEK, VI                 |        |                  |    |
|-------------------------------|--------|------------------|----|
| Subject Code                  | 17CV64 | IA Marks         | 40 |
| Number of Lecture Hours/Week  | 04     | Exam Marks       | 60 |
| Total Number of Lecture Hours | 50     | Exam Hours       | 03 |
| CREDITS -04                   |        | Total Marks- 100 |    |

**Course objectives:** This course will enable students to

- 1. Analyze the variation of water demand and to estimate water requirement for a community.
- 2. Evaluate the sources and conveyance systems for raw and treated water.
- 3. Study drinking water quality standards and to illustrate qualitative analysis of water.
- 4. Design physical, chemical and biological treatment methods to ensure safe and potable water Supply.

#### Module -1

Introduction: Need for protected water supply. Demand of Water: Types of water demands -domestic demand, industrial, institutional and commercial, public use, fire demand, Factors affecting per capita demand, Variations in demand of water, Peak factor, Design period and factors governing design period.

Different methods of population forecasting -with merits and demerits. Numerical Problems.

#### Module -2

Water Treatment: Objectives, Treatment flow chart – significance of each unit Sources and Characteristics: surface and subsurface sources -suitability with regard to quality and quantity. Sampling - Objectives, methods, Preservation techniques. Water quality characteristics: Physical, Chemical and Microbiological.

L1,L2,L3

L1,L2,L3

#### Module -3

Sedimentation -theory, settling tanks, types, design. Concept of Plate and Tube settlers. Coagulation aided sedimentation-types of coagulants, chemical feeding, flash mixing, Clarriflocculators . Filtration: mechanism -theory of filtration, types of filters, slow sand, rapid sand and pressure filters including construction, operation, cleaning. Operational problems in filters. Design of slow and rapid sand filter without under drainage system. Ultra and micro filtration: Basic principles, membrane materials, pore size, flux, normalizing permeability, fouling mechanism, Overview of ultra and micro filtration elements and systems, Fouling in MF/UF systems, fouling control and pre treatment. L1,L2,L3

#### Module -4

Softening: Overview of Lime soda, Zeolite process, RO and Nano filtration: Basic principles, Flux, Salt passage, rejection and concentration polarization. Overview of RO and nano filtration membranes and elements, Conventional pre treatment techniques for RO and nano filtration.

Disinfection: Methods of disinfection with merits and demerits, Theory of disinfection, emphasis on treatment of water for community bathing. (melas and fairs) Fluoridation and De-fluoridation.

#### Module -5

#### L1,L2,L3

Collection and Conveyance of water: Intake structures - types of intakes –Factors to be considered in selection of intake structures.

Pumps: Types of pumps with working principles. Numerical Problems.

Pipes: Design of the economical diameter for the rising main; Numerical Problems.

Pipe appurtenances, Valves, Fire hydrants

Pipe materials: Different materials with advantages and disadvantages. Factors affecting selection of pipe material.

Distribution system: Methods- Gravity, Pumping, Combined gravity and pumping system, Service reservoirs and their capacity determination.

Visit to Intake structure, Water treatment plant and report working of each unit Design of water treatment plant units and distribution system with population forecasting for the given city

L1,L2,L3

#### **Course Outcomes:** After studying this course, students will be able to:

- 1. Estimate average and peak water demand for a community.
- 2. Evaluate available sources of water, quantitatively and qualitatively and make appropriate choice for a community.
- 3. Evaluate water quality and environmental significance of various parameters and plan suitable treatment system.
- 4. Design a comprehensive water treatment and distribution system to purify and distribute water to the required quality standards.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. S.K.Garg, Environmental Engineering vol-I, Water supply Engineering M/s Khanna Publishers, New Delhi 2010
- 2. Mark.J Hammer, Water & Waste Water Technology, John Wiley & Sons Inc., New York, 2008.

- 1. B.C. Punmia and Ashok Jain, Environmental Engineering I-Water Supply Engineering, Laxmi Publications (P)Ltd., New Delhi 2010.
- 2. Howard S. Peavy, Donald R. Rowe, George T, Environmental Engineering McGraw Hill International Edition. New York, 2000
- 3. CPHEEO Manual on water supply and treatment engineering, Ministry of Urban Development, Government of India, New Delhi.

### Course Title: SOLID WASTE MANAGEMENT As per Choice Based Credit System (CBCS) scheme]

| SEMESTER:VI                   |         |                 |    |  |
|-------------------------------|---------|-----------------|----|--|
| Subject Code                  | 17CV651 | IA Marks        | 40 |  |
| Number of Lecture Hours/Week  | 03      | Exam Marks      | 60 |  |
| Total Number of Lecture Hours | 40      | Exam Hours      | 03 |  |
| CREDITS -03                   |         | Total Marks- 10 | 0  |  |
|                               |         |                 |    |  |

Course objectives: This course will enable students to

- 1. Study the present methods of solid waste management system and to analyze their draw backs comparing with statutory rules.
- 2. Understand different elements of solid waste management from generation of solid waste to disposal.
- 3. Analyze different processing technologies and to study conversion of municipal solid waste to compost or biogas.
- 4. Evaluate landfill site and to study the sanitary landfill reactions.

#### Module -1

Sources: Sources of Solid waste, Types of solid waste, Physical and Chemical composition of municipal solid waste. Generation rate, Numerical Problems.

Collection: Collection of solid waste- services and systems, equipments,

Transportation: Need of transfer operation, transfer station, transport means and methods, route optimization. Solid waste management 2000 rules with, 2016 amendments.

#### Module -2

Processing techniques: Purpose of processing, Chemical volume reduction (incineration) – Process description, 3T's, principal components in the design of municipal incinerators, Air pollution control,Mechanical volume reduction (compaction), Mechanical size reduction (shredding), component separation (manual and mechanical methods).

#### L1,L2,L3

L1,L2,L3

#### Module -3

Composting Aerobic and anaerobic method - process description, process microbiology, design consideration, Mechanical composting, Vermicomposting, Numerical Problems. Sanitary landfilling: Definition, advantages and disadvantages, site selection, methods, reaction occurring in landfill- Gas and Leachate movement, Control of gas and leachate movement, Design of sanitary landfill. Numerical Problems

#### L1,L2,L3

**Module -4** Sources, collection, treatment and disposal of :-Biomedical waste ,E-waste ,Hazardous waste and construction waste

#### L1,L2,L3

#### Module -5

Incineration -3Ts factor affecting incineration ,types of incinerations , Pyrolsis ,design criteria for incineration

Energy recovery technique from solid waste management

#### L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 1. Analyse existing solid waste management system and to identify their drawbacks.
- 2. Evaluate different elements of solid waste management system.
- 3. Suggest suitable scientific methods for solid waste management elements.
- 4. Design suitable processing system and evaluate disposal sites.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Text Books:**

1. George Tchobanoglous, Hilary Theisen , Samuel A Vigil, "Integrated Solid Waste

Management : Engineering principles and management issues", M/c Graw hill Education . Indian edition

2. Howard S Peavy, Donald R Rowe and George Tchobanoglous, "Environmental Engineering", Tata Mcgraw Hill Publishing Co ltd.,

- Municipal Solid Wastes (Management and Handling) Rules, 2000.Ministry of Environment and Forests Notification, New Delhi, the 25th September, 2000. Amendment – 1357(E) – 08-04-2016
- 2. Municipal Solid waste management manual, Part II published under Swachh Bharat Mission, Central Public Health And Environmental Engineering Organization (CPHEEO), 2016, Ministry of Urban Development, Government of India.
- 3. Handbook of Solidwaste management, second edition, George Tchobanoglous, Frank Kreith, published by M/c Graw hill Education, 2002, ISBN-13 978-0071356237 ISBN -10 0071356231

#### Course Title: MATRIX METHOD OF STRUCTURAL ANALYSIS As per Choice Based Credit System (CBCS) scheme] SEMESTER:VI

|   | SEMESTER:VI              |                          |                  |
|---|--------------------------|--------------------------|------------------|
| Subject Code  | 17CV652                  | IA Marks                 | 40               |
| Number of Lecture Hours/Week  | 03                       | Exam Marks               | 60               |
| Total Number of Lecture Hours   | 40                       | Exam Hours               | 03               |
| CREDITS -03   |                          | Total Marks- 1           | 00               |
| Course objectives: This course will   | enable students to       |                          |                  |
| 1. Gain basic knowledge of structu  | ral systems and app      | plication of concept     | s of flexibility |
| and stiffness matrices for simple   | e elements.              |                          |                  |
| 2. Understand flexibility and stiffne   | ess matrices to solv     | e problems in beam       | s, frames and    |
| trusses.  |                          |                          |                  |
| 3. Gain knowledge of direct stiffnes  | ss method to solve p     | problems in beams,       | frames and       |
| trusses.  |                          | _                        |                  |
| 4. Gain knowledge of solving proble   | ems involving tempe      | erature changes and      | l lack of fit.   |
| Module -1   |                          |                          |                  |
| Introduction: Structural systems,   |                          |                          |                  |
|   | compatibility cor        |                          | ind kinematic    |

#### Course Title: ALTERNATIVE BUILDING MATERIALS As per Choice Based Credit System (CBCS) scheme] SEMESTER VI

| SEMIESTER:VI                         |                    |              |     |
|--------------------------------------|--------------------|--------------|-----|
| Subject Code                         | 17CV653            | IA Marks     | 40  |
| Number of Lecture Hours/Week         | 03                 | Exam Marks   | 60  |
| <b>Total Number of Lecture Hours</b> | 40                 | Exam Hours   | 03  |
|                                      | <b>CREDITS –03</b> | Total Marks- | 100 |

**Course objectives:** This Course will enable students to:

1. understand environmental issues due to building materials and the energy consumption in manufacturing building materials

- 2. study the various masonry blocks, masonry mortar and structural behavior of masonry under compression.
- 3. Study the alternative building materials in the present context.
- 4. understand the alternative building technologies which are followed in present construction field.

#### Module -1

**Introduction:** Energy in building materials, Environmental issues concerned to building materials, Embodied energy and life-cycle energy, Global warming and construction industry, Green concepts in buildings, Green building ratings – IGBC and LEED manuals – mandatory requirements, Rainwater harvesting & solar passive architecture. Environmental friendly and cost effective building technologies, Requirements for buildings of different climatic regions **L1,L2,L3** 

#### Module -2

**Elements of Structural Masonry :** Elements of Structural Masonry, Masonry materials, requirements of masonry units' characteristics of bricks, stones, clay blocks, concrete blocks, stone boulders, laterite Blocks, Fal- G blocks and Stabilized mud block. Manufacture of stabilized blocks.

**Structural Masonry Mortars:** Mortars, cementations materials, sand, natural & manufactured, types of mortars, classification of mortars as

per BIS, characteristics and requirements of mortar, selection of mortar.

Uses of masonry, masonry bonding, Compressive strength of masonry elements, Factors affecting compressive strength, Strength of Prisms/wallets and walls, Effect of brick bond on strength, Bond strength of masonry: Flexure and shear, Elastic properties of masonry materials and masonry, Design of masonry compression elements subjected to axial load.

#### L1,L2,L3

Module -3

**Alternative Building Materials:** Lime, Pozzolana cements, Raw materials, Manufacturing process, Properties and uses. Fibers- metal and synthetic, Properties and applications. Fiber reinforced plastics, Matrix materials, Fibers organic and synthetic, Properties and applications. Building materials from agro and industrial wastes ,Types of agro wastes, Types of industrial and mine wastes, Properties and applications. Masonry blocks using industrial wastes. Construction and demolition wastes

#### L1,L2,L3

Module -4 Alternative Building Technologies: Use of arches in foundation, alternatives for wall constructions, composite masonry, confined masonry, cavity walls, rammed earth, Ferro cement and ferroconcrete building components, Materials and specifications, Properties, Construction methods, Applications. Top down construction, Mivan Construction Technique.

Alternative Roofing Systems: Concepts, Filler slabs, Composite beam panel roofs, Masonry vaults and domes

L1,L2,L3

Module -5

**Equipment for Production of Alternative Materials:** Machines for manufacture of concrete, Equipments for production of stabilized blocks, Moulds and methods of production of precast elements, Cost concepts in buildings, Cost saving techniques in planning, design and construction, Cost analysis: Case studies using alternatives.

L1,L2,L3

#### **Course Outcomes:** After studying this course, students will be able to:

- 1. Solve the problems of Environmental issues concerned to building materials and cost effective building technologies;
- 2. Suggest appropriate type of masonry unit and mortar for civil engineering constructions; also they are able to Design Structural Masonry Elements under Axial Compression.
- 3. Analyse different alternative building materials which will be suitable for specific climate and in an environmentally sustainable manner. Also capable of suggesting suitable agro and industrial wastes as a building material.
- 4. Recommend various types of alternative building materials and technologies and design a energy efficient building by considering local climatic condition and building material.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. KS Jagadish, BV Venkatarama Reddy and KS Nanjunda Rao, "Alternative Building Materials and Technologies", New Age International pub.
- 2. Arnold W Hendry, "Structural Masonry", Macmillan Publishers

- 1. RJS Spence and DJ Cook, "Building Materials in Developing Countries", Wiley pub.
- 2. LEED India, Green Building Rating System, IGBC pub.
- 3. IGBC Green Homes Rating System, CII pub.
- 4. Relevant IS Codes.

#### Course Title: GROUND IMPROVEMENT TECHNIQUES As per Choice Based Credit System (CBCS) scheme] SEMESTER:VI

| Subject Code                  | 17CV654 | IA Marks         | 40 |  |
|-------------------------------|---------|------------------|----|--|
| Number of Lecture Hours/Week  | 03      | Exam Marks       | 60 |  |
| Total Number of Lecture Hours | 40      | Exam Hours       | 03 |  |
| CREDITS -03                   |         | Total Marks- 100 | )  |  |
|                               |         |                  |    |  |

Course objectives: This course will enable students to

- 1. Understand the fundamental concepts of ground improvement techniques
- 2. Apply knowledge of mathematics, Science and Geotechnical Engineering to solve problems in the field of modification of ground required for construction of civil engineering structures.
- 3. Understand the concepts of chemical compaction, grouting and other miscellaneous methods.
- 4. Impart the knowledge of geosynthetics, vibration, grouting and Injection.
- Module -1

**Formation and Development of Ground :** Introduction, Formation of Rock, soil and soil profile, Soil distribution in India, Alterations of ground after formation, Reclaimed soils, Natural offshore deposits;

Ground Improvement Potential – Hazardous ground conditions, poor ground conditions, favourable ground conditions, Alternative Approaches, Geotechnical processes.

**Compaction:** Introduction, compaction mechanics, Field procedure, surface compaction, Dynamic Compaction, selection of field compaction procedures, compaction quality control.

#### L1, L2 , L3

L1, L2, L3

#### Module -2

**Drainage Methods:** Introduction, Seepage, filter requirements, ground water and seepage control, methods of dewatering systems, Design of dewatering system including pipe line effects of dewatering. Drains, different types of drains.

**Pre-compression and Vertical Drains:** Importance, Vertical drains, Sand drains, Drainage of slopes, Electro kinetic dewatering, Preloading

#### Module -3

**Chemical Modification-I:** Definition, cement stabilization, sandwich technique, admixtures. Hydration – effect of cement stabilization on permeability, Swelling and shrinkage and strength and deformation characteristics. Criteria for cement stabilization. Stabilization using Fly ash.

**Chemical Modification-Ii:** Lime stabilization – suitability, process, criteria for lime stabilization. Other chemicals like chlorides, hydroxides, lignin and hydrofluoric acid. Properties of chemical components, reactions and effects. Bitumen, tar or asphalt in stabilization.

#### L2, L3 , L4

#### Module -4

**Vibration Methods:** Introduction, Vibro compaction – blasting, vibratory probe, Vibro displacement compaction – displacement piles, vibroflotation, sand compaction piles, stone columns, heavy tamping

GROUTING AND INJECTION: Introduction, Effect of grouting. Chemicals and materials used. Types of grouting. Grouting procedure, Applications of grouting

#### L2, L3, L5

Module -5

**Geosynthetics:** Introduction, Geosynthetic types, properties of Geosynthetics – materials and fibre properties, Geometrical aspects, mechanical properties, Hydraulic properties, Durability; Applications of

Geosynthetics - Separation, Filtration and Fluid Transmission, Reinforcement,

**Miscellaneous Methods (Only Concepts & Uses):** Soil reinforcement, Thermal methods, Ground improvement by confinement – Crib walls, Gabions and Mattresses, Anchors, Rock bolts and soil nailing. Stone Column, Micro piles.

**Course Outcomes:** After studying this course, students will be able to:

- 1. Give solutions to solve various problems associated with soil formations having less strength.
- 2. Use effectively the various methods of ground improvement techniques depending upon the requirements.
- 3. utilize properly the locally available materials and techniques for ground improvement so that economy in the design of foundations of various civil engineering structures

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

| Course Title: WATER RESOURCES MANAGEMENT<br>[As per Choice Based Credit System (CBCS) scheme]<br>SEMESTER:VI  |  |                    |        |  |
|---|--|--------------------|--------|--|
| Subject Code  | 17CV661  | IA Marks           | 40     |  |
| Number of Lecture Hours/Week  | 03   | Exam Marks         | 60     |  |
| Total Number of Lecture Hours   | 40   | Exam Hours         | 03     |  |
|   | CREDITS - 03                                     | Total Marks-1      | 100    |  |
| CREDITS - 03Total Marks-100Course objectives: This course will enable students to;1. Judge surface and ground water resources.2. Address the issues of water resources management.3. Learn the principles of integrated water resources management.4. Understand the legal framework of water policy.5. Know the different methods of water harvesting.Module -1Surface and Ground water Resources: Hydrologic Cycle, Global water resources andIndian Water resources, Surface Water Resources, Water Balance, Available RenewableWater Resources, Water Scarcity, The Water Balance as a Result of Human Interference,<br>Groundwater Resources, Types of Aquifers, Groundwater as a Storage Medium |  |                    |        |  |
| Module -2   |  |                    | L2, L3 |  |
| Water Resources Planning and Manager<br>scales, Approaches, planning and manager<br>prediction and evaluation, Adaptive Integr<br>Issues.   | gement aspects, Ar                               | alysis, Models for | impact |  |
| Module -3   |  |                    |        |  |
| Implementation of IWRM, Legislative and C<br>Private Sector Involvement.  | <b>ement:</b> Definition<br>Drganizational Frame |                    | -      |  |
| Module -4   |  |                    |        |  |
| Water Governance and Water Policy: Lega<br>Water Laws – Other key issues – Changing   |  |                    |        |  |

Water Governance and Water Policy: Legal Framework of Water – Substance of National Water Laws – Other key issues – Changing incentives through Regulation - National Water Policy – National-Level Commissions – Irrigation Management Transfer Policies and Activities – Legal Registration of WUAs – Legal Changes in Water Allocation, – Role of Local Institutions – Community Based Organizations – Water Policy Reforms: India.

#### Module -5

Water Harvesting and Conservation: Water Harvesting Techniques – Micro-catchments - Design of Small Water Harvesting Structures – Farm Ponds – Percolation Tanks – Yield from a Catchment, Rain water Harvesting-various techniques related to Rural and Urban area.

L2, L3

L2, L3

**Course outcomes:** After studying this course, students will be able to:

2. Address the issues related to planning and management of water resources.

3. Know how to implement IWRM in different regions.

- 4. Understand the legal issues of water policy.
- 5. Select the method for water harvesting based on the area.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Text Books:**

- 1. K. Subramanya, "Engineering Hydrology", Tata McGraw Hill Publishers, New Delhi.
- 2. H.M. Raghunath, "Ground Water", Wiley Eastern Publication, New Delhi.
- 3. Daniel P. Loucks and Eelco van Beek, "Water Resources Systems. Planning and Management", UNESCO Publication.
- 4. Mollinga, P. et al, "Integrated Water Resources Management", Water in South Asia Volume I, Sage Publications, 2006.
- 5. Singh, Chhatrapati "Water Rights in India," Ed: Chhatrapati Singh. Water Law in India: The Indian Law Institute, New Delhi,1992.
- 6. 6) Dhruva Narayana, G. Sastry, V. S. Patnaik, "Watershed Management", CSWCTRI, Dehradun, ICAR Publications, 1997.

- 1. Lal, Ruttan. " Integrated Watershed Management in the Global Ecosystem". CRC Press, New York.
- 2. Heathcote, I. W. Integrated Watershed Management: Principles and Practice. 1988. John Wiley and Sons, Inc., New York.

#### **Course Title: ENVIRONMENTAL PROTECTION AND MANAGEMENT** As per Choice Based Credit System (CBCS) scheme] SEMESTER·VI

| SEMESTER:VI                   |         |                  |    |  |
|-------------------------------|---------|------------------|----|--|
| Subject Code                  | 17CV662 | IA Marks         | 40 |  |
| Number of Lecture Hours/Week  | 03      | Exam Marks       | 60 |  |
| Total Number of Lecture Hours | 40      | Exam Hours       | 03 |  |
| CREDITS -03                   |         | Total Marks- 100 |    |  |

**Course objectives:** This course will enable students to gain knowledge in Environmental protection and Management systems

#### **Environmental Management Standards** Module -1

Unique Characteristics of Environmental Problems - Systems approach to Corporate environmental management - Classification of Environmental Impact Reduction Efforts -Business Charter for Sustainable Production and Consumption - Tools, Business strategy drivers and Barriers - Evolution of Environmental Stewardship. Environmental Management Principles - National policies on environment, abatement of pollution and conservation of resources - Charter on Corporate responsibility for Environmental protection.

L1,L2,L3

#### **Module -2 Environmental Management Objectives**

Environmental quality objectives - Rationale of Environmental standards: Concentration and Mass standards, Effluent and stream standards, Emission and ambient standards, Minimum national standards, environmental performance evaluation: Indicators, benchmarking. Pollution control Vs Pollution Prevention - Opportunities and Barriers -Cleaner production and Clean technology, closing the loops, zero discharge technologies L1,L2,L3

#### **Module -3 Environmental Management System**

EMAS, ISO 14000 - EMS as per ISO 14001- benefits and barriers of EMS - Concept of continual improvement and pollution prevention - environmental policy - initial environmental review - environmental aspect and impact analysis - legal and other requirements- objectives and targets – environmental management programs – structure and responsibility - training awareness and competence- communication documentation and document control - operational control - monitoring and measurement - management review.

#### L1,L2,L3

#### **Module -4 Environmental Audit**

Environmental management system audits as per ISO 19011- - Roles and qualifications of auditors - Environmental performance indicators and their evaluation -Non conformance - Corrective and preventive actions -compliance audits - waste audits and waste minimization planning – Environmental statement (form V) - Due diligence audit

#### **Module -5 Applications**

Applications of EMS, Waste Audits and Pollution Prevention opportunities in Textile, Sugar, Pulp & Paper, Electroplating, , Tanning industry, Dairy, Cement, Chemical industries, etc. Trans boundary movement, disposal, procedures, of hazardous wastes.

L1,L2,L3

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 1. Appreciate the elements of Corporate Environmental Management systems complying to international environmental management system standards
- 2. Lead pollution prevention assessment team and implement waste minimization options
- 3. Develop, Implement, maintain and Audit Environmental Management systems for Organisations

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

- 1. Christopher Sheldon and Mark Yoxon, "Installing Environmental management Systems – a step by step guide" Earthscan Publications Ltd, London, 1999.
- 2. ISO 14001/14004: Environmental management systems Requirements and Guidelines International Organisation for Standardisation, 2004
- 3. ISO 19011: 2002, "Guidelines for quality and/or Environmental Management System auditing, Bureau of Indian Standards, New Delhi, 2002
- 4. Paul L Bishop "Pollution Prevention: Fundamentals and Practice", McGraw-Hill International, Boston, 2000.
- 5. Environmental Management Systems: An Implementation Guide for Small and Medium-Sized Organizations, Second Edition, NSF International, Ann Arbor, Michigan, January 2001.

#### Course Title: NUMERICAL METHODS AND APPLICATIONS As per Choice Based Credit System (CBCS) scheme] SEMESTER:VI

| SEMESTER. VI                         |         |                  |    |
|--------------------------------------|---------|------------------|----|
| Subject Code                         | 17CV663 | IA Marks         | 40 |
| Number of Lecture Hours/Week         | 03      | Exam Marks       | 60 |
| <b>Total Number of Lecture Hours</b> | 40      | Exam Hours       | 03 |
| CREDITS -03                          |         | Total Marks- 100 |    |

**Course objectives:** This course aims at providing the necessary basic concepts of a few numerical methods and give procedures for solving numerically different kinds of problems occurring in engineering and technology

#### Module -1

**Solution of Equations and Eigen value Problems:** Solution of algebraic and transcendental equations, Fixed point iteration method, Newton Raphson method, Solution of linear system of equations, Gauss elimination method, Pivoting, Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Matrix Inversion by Gauss Jordan method

#### Module -2

**Interpolation and Approximation:** Interpolation with unequal intervals - Lagrange's interpolation – Newton's divided difference interpolation – Cubic Splines - Interpolation with equal intervals - Newton's forward and backward difference formulae.

#### Module -3

Module -4

**Numerical Differentiation and Integration:** Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson's 1/3 rule - Romberg's method - Two point and three point Gaussian quadrature formulae - Evaluation of double integrals by Trapezoidal and Simpson's 1/3 rules.

#### L1,L2,L3

L1,L2,L3

L1,L2,L3

**Initial Value Problems for Ordinary Differential Equations :** Single Step methods -Taylor's series method - Euler's method - Modified Euler's method – Fourth order Runge-Kutta method for solving first order equations - Multi step methods - Milne's and Adams-Bash forth predictor corrector methods for solving first order equations.

#### L1,L2,L3

#### Module -5

#### **Boundary Value Problems in Ordinary and Partial Differential Equations:**

Finite difference methods for solving two-point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.

L1,L2,L3

**Course Outcomes:** After studying this course, The students will have a clear perception of the power of numerical techniques, ideas and would be able to demonstrate the applications of these techniques to problems drawn from Industry, management and other engineering fields.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. Grewal. B.S., and Grewal. J.S., "Numerical methods in Engineering and Science", Khanna
  - Publishers, 9th Edition, New Delhi
- 2. Gerald. C. F., and Wheatley. P. O., "Applied Numerical Analysis", Pearson Education, Asia, 6th Edition, New Delhi

#### **Reference Books:**

1. Chapra. S.C., and Canale.R.P., "Numerical Methods for Engineers, Tata McGraw Hill,

New Delhi

- 2. 2. Brian Bradie. "A friendly introduction to Numerical analysis", Pearson Education, Asia, New Delhi
- 3. Sankara Rao. K., "Numerical methods for Scientists and Engineers", Prentice Hall of India Private, New Delhi

#### Course Title: FINITE ELEMENT METHOD As per Choice Based Credit System (CBCS) scheme]

|                                      | SEMESTER:VI |                  |    |
|--------------------------------------|-------------|------------------|----|
| Subject Code                         | 17CV664     | IA Marks         | 40 |
| Number of Lecture Hours/Week         | 03          | Exam Marks       | 60 |
| <b>Total Number of Lecture Hours</b> | 40          | Exam Hours       | 03 |
| CREDITS -03                          |             | Total Marks- 100 |    |

**Course objectives:** This course will enable students to;

- 1. Develop analytical skills.
- 2. Learn principles of analysis of stress and strain.
- 3. Develop problem solving skills.
- 4. Understand the principles of FEM for one and two dimensional problems.

#### Module -1

Theory of elasticity concepts, Energy principles, Rayleigh - Ritz Method, Galerkin method and finite element method, steps in finite element analysis, displacement approach, stiffness matrix and boundary conditions

#### Module -2

Discritisation; finite representation of infinite bodies and discritisation of very large bodies, Natural Coordinates, Shape functions; polynomial, LaGrange and Serendipity, one dimensional formulations; beam and truss with numerical examples

#### Module -3

2D formulations; Constant Strain Triangle, Linear Strain Triangle, 4 and 8 noded quadrilateral elements, Numerical Evaluation of Element Stiffness -Computation of Stresses, Static Condensation of nodes, degradation technique, Axisymmetric Element

#### L1,L2,L3

L1,L2

L1.L2

#### Module -4

Isoparametric concepts; isoparametric, sub parametric and super parametric elements, Jacobian transformation matrix, Stiffness Matrix of Isoparametric Elements, Numerical integration by Gaussian quadrature rule for one, two and three dimensional problems

L1,L2,L3

#### Module -5

Techniques to solve nonlinearities in structural systems; material, geometric and combined non linearity, incremental and iterative techniques.

Structure of computer program for FEM analysis, description of different modules, exposure to FEM softwares.

#### L1,L2,L3

**Course outcomes:** The student will have the knowledge on advanced methods of analysis of structures

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Text Books:**

- 1. Krishnamoorthy C.S., "Finite Element analysis" -Tata McGraw Hill
- 2. Desai C &Abel J F.," Introduction to Finite element Method", East West Press Pvt. Ltd.,
- 3. Cook R D et.al., "Concepts and applications of Finite Element analysis ", John Wiley

- 1. Daryl L Logan," A first course on Finite element Method ", Cengage Learning
- 2. Bathe K J " Finite Element Procedures in Engineering analysis "- Prentice Hall

|-------|---|
|       | a. Reconnaissance survey for selection of site and conceptualization of project.    |
|       | b. Alignment of center line of the existing bund, Longitudinal and cross sections   |
|       | of the center line.   |
|       | c. Detailed survey required for project execution like Capacity surveys, Details at |
|       | Waste weir and sluice points, Canal alignment etc. as per requirement               |
|       | d. Design of all elements and preparation of drawing with report.                   |
| 5.    | TOWN/HOUSING / LAYOUT PLANNING: The work shall consist of;                          |
|       | a. Reconnaissance survey for selection of site and conceptualization of project.    |
|       | b. Detailed survey required for project execution like contour surveys              |
|       | c. Preparation of layout plans as per regulations                                   |
|       | e. Centerline marking-transfer of centre lines from plan to ground                  |
|       | f. Design of all elements and preparation of drawing with report as per             |
|       | regulations   |
|       |   |
|       |   |
| Cours | se outcomes: After studying this course, students will be able to:                  |
| 1.    | Apply Surveying knowledge and tools effectively for the projects                    |
| 2.    | Understanding Task environment, Goals, responsibilities, Task focus, working in     |
|       | Teams towards common goals, Organizational performance expectations,                |
|       | technical and behavioral competencies.  |
| 3.    | Application of individual effectiveness skills in team and organizational context,  |
|       | goal setting, time management, communication and presentation skills.               |
| 4.    | Professional etiquettes at workplace, meeting and general                           |
| 5.    | Establishing trust based relationships in teams & organizational environment        |
| 6.    | Orientation towards conflicts in team and organizational environment,               |
|       | Understanding sources of conflicts, Conflict resolution styles and techniques       |

# 7<sup>th</sup> Semester

#### Course Title: MUNICIPAL AND INDUSTRIAL WASTE WATER ENGINEERING

#### As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                  | 17CV71 | IA Marks         | 40 |
|-------------------------------|--------|------------------|----|
| Number of Lecture Hours/Week  | 04     | Exam Marks       | 60 |
| Total Number of Lecture Hours | 50     | Exam Hours       | 03 |
| CREDITS -04                   |        | Total Marks- 100 |    |

Course objectives: This course will enable students to;

4. Understand sewerage network and influencing parameters.

- 5. Understand and design different unit operations involved in conventional and biological treatment process.
- 6. Apply the principles of Industrial effluent treatment process for different industrial wastes.
- 7. Evaluate self purification of streams depending on hydraulic and organic loading of sewage into receiving waters.

#### Module -1

Introduction, need for sanitation, methods of sewage disposal, types of sewerage systems, dry weather flow, wet weather flow, factors effecting dry and wet weather flow on design of sewerage system, estimation of storm flow, time of concentration flow, material of sewers, shape of sewers, laying and testing of sewers, ventilation of sewers. low-cost waste treatment; oxidation pond, septic tank, Sewer appurtenances, manholes, catch basins, basic principles of house drainage, typical layout plan showing house drainage connections,

#### L1,L2

#### Module -2

Design of sewers, hydraulic formula for velocity, effects of variation on velocity, regime velocity, design of hydraulic elements for circular sewers for full flow and partial flow conditions, disposal of effluents by dilution, self purification phenomenon, oxygen sag curve, zones of purification, sewage farming, sewage sickness, numerical problems on disposal of effluents, Streeter-Phelps equation

#### L2,L3

#### Module -3

Waste water characteristics, sampling, significance and techniques, physical, chemical and biological characteristics, flow diagram for municipal waste water treatment, unit operations; screens, grit chambers, skimming tanks, equalization tanks

Suspended growth and fixed film bio process, design of trickling filters, activated sludge process, sequential batch reactors, moving bed bio reactors, sludge digesters,

#### L1,L2,L3

Module -4

Difference between domestic and industrial waste water, effect of effluent discharge on streams, methods of industrial waste water treatment; volume reduction, strength reduction, neutralization, equalisation and proportioning. Removal of organic, inorganic and colloidal solids, combined treatment methods; merits, demerits and feasibility, principles of discharge of raw, partially treated and completely treated wastes in to streams

#### L1,L2

#### Module -5

Process flow chart, sources and characteristics of industrial waste water, treatment methods, reuse and recovery and disposal; cotton and textile industry, tanning industry, cane sugar and distilleries, dairy industry, steel and cement industry, paper and pulp industry, pharmaceutical and food processing industry.

#### L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 4. Acquires capability to design sewer and Sewerage treatment plant.
- 5. Evaluate degree of treatment and type of treatment for disposal, reuse and recycle.
- 6. Identify waste streams and design the industrial waste water treatment plant.
- 7. Manage sewage and industrial effluent issues.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. Metcalf and Eddy, "Wastewater Engineering Collection, Treatment, Disposal and Reuse", McGraw Hill Pub.Co., 2009.
- 2. Nelson Leonard Nemerow, "Industrial Waste Treatment", Butterworth-Heinemann, 2007.
- 3. Patwardhan A.D, "Industrial Waste Water Treatment", PHI Learning Private Limited-New Delhi
- 4. Hammer, M.J. and Hammer, M.J., "Water and Wastewater Technology", 7th Ed., Prentice Hall of India

- 1. Manual on Waste Water Treatment: CPHEEO, Ministry of Urban Development, New Delhi.
- 2. Fair, Geyer and Okun , "Water and Wastewater Engineering" Vol-II, John Willey Publishers, New York.

#### **Course Title: DESIGN OF RCC AND STEEL STRUCTURES**

#### As per Choice Based Credit System (CBCS) scheme]

#### **SEMESTER:VII**

| Subject Code                  | 17CV72 | IA Marks        | 40 |
|-------------------------------|--------|-----------------|----|
| Number of Lecture Hours/Week  | 04     | Exam Marks      | 60 |
| Total Number of Lecture Hours | 50     | Exam Hours      | 03 |
| CREDITS -04                   |        | Total Marks- 10 | 0  |

**Course objectives:** This course will enable students to

- 6. Provide basic knowledge in the areas of limit state method and concept of design of RC and Steel structures
- 7. Identify, formulate and solve engineering problems in RC and Steel Structures
- 8. Give procedural knowledge to design a system, component or process as per needs and specifications of RC Structures like Retaining wall, Footing, Water tanks, Portal Frames and Steel Structures like Roof Truss, Plate Girder and Gantry Girder.
- 9. Imbibe the culture of professional and ethical responsibilities by following codal provisions in the analysis, design of RC and Steel Structures.
- 10.Provide factual knowledge on analysis and design of RC Structural elements, who can participate and succeed in competitive examinations.

#### Module -1

Footings: Design of rectangular slab type combined footing.

Retaining Walls: Design of cantilever Retaining wall and counter fort retaining wall.

**Water Tanks:** Design of circular water tanks resting on ground (Rigid and Flexible base). Design of rectangular water tanks resting on ground. **As per IS: 3370 (Part IV)** 

Design of portal frames with fixed and hinged based supports.

#### L1,L2,L3

#### Module -2

**Roof Truss:** Design of roof truss for different cases of loading, forces in members to given.

**Plate Girder:** Design of welded plate girder with intermediate stiffener, bearing stiffener and necessary checks

Gantry Girder: Design of gantry girder with all necessary checks

#### L1,L2,L3

**Course Outcomes:** After studying this course, students will be able to:

6. Students will acquire the basic knowledge in design of RCC and Steel Structures.

7. Students will have the ability to follow design procedures as per codal provisions and skills to arrive at structurally safe RC and Steel members.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### **Question Paper Pattern:**

- Two questions shall be asked from each module. There can be maximum of three subdivisions in each question, if necessary.
- One full question should be answered from each module.
- Each question carries 40 marks.
- 3. Code books IS 456, IS 800, IS 3370 (Part IV), SP (6) Steel Tables, shall be referred for designing
- 4. The above charts shall be provided during examinations

#### Text Books:

- 4. N Krishna Raju, "Structural Design and Drawing of Reinforced Concrete and Steel", University Press
- 5. Subramanian N, "Design of Steel Structures", Oxford university Press, New Delhi
- 6. K S Duggal, "Design of Steel Structures", Tata McGraw Hill, New Delhi

- 6. Charles E Salman, Johnson & Mathas, **"Steel Structure Design and Behaviour"**, Pearson Publications
- 7. Nether Cot, et.al, **"Behaviour and Design of Steel Structures to EC -III"**, CRC Press
- 8. P C Verghese, **"Limit State Design of Reinforced Concrete"**, PHI Publications, New Delhi
- 9. S N Sinha, "Reinforced Concrete Design", McGraw Hill Publication

## **Course Title: HYDROLOGY AND IRRIGATION ENGINEERING**

## [As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

|                               | CREDITS - 04 | Total Marks | s-100 |
|-------------------------------|--------------|-------------|-------|
| Total Number of Lecture Hours | 50           | Exam Hours  | 03    |
| Number of Lecture Hours/Week  | 04           | Exam Marks  | 60    |
| Subject Code                  | 17CV73       | IA Marks    | 40    |

Course Objectives: This course will enable students to;

- 1. Understand the concept of hydrology and components of hydrologic cycle such as pricipitation, infiltration, evaporation and transpiration.
- 2. Quantify runoff and use concept of unit hydrograph.
- 3. Demonstrate different methods of irrigation, methods of application of water and irrigation procedure.
- 4. Design canals and canal network based on the water requirement of various crops.
- 5. Determine the reservoir capacity.

## Module -1

**Hydrology:** Introduction, Importance of hydrology, Global and Indian water availability, Practical application of hydrology, Hydrologic cycle (Horton's) qualitative and engineering representation.

**Precipitation:** Definition, Forms and types of precipitation, measurement of rain fall using Symon's and Syphon type of rain gauges, optimum number of rain gauge stations, consistency of rainfall data (double mass curve method), computation of mean rainfall, estimation of missing data, presentation of precipitation data, moving average curve, mass curve, rainfall hyetographs.

## L2, L3

## Module -2

**Losses: Evaporation:** Introduction, Process, factors affecting evaporation, measurement using IS class-A Pan, estimation using empirical formulae (Meyer's and Rohwer's equations) Reservoir evaporation and control

**Evapo-transpiration:** Introduction, Consumptive use, AET, PET, Factors affecting, Measurement, Estimation by Blaney-Criddle equation,

**Infiltration:** Introduction, factors affecting infiltration capacity, measurement by double ring infiltrometer, Horton's infiltration equation, infiltration indices.

## L2, L3

## Module -3

**Runoff:** Definition, concept of catchment, factors affecting runoff, rainfall – runoff relationship using regression analysis.

**Hydrographs:** Definition, components of hydrograph, base flow separation, unit hydrograph, assumption, application and limitations, derivation from simple storm hydrographs, S curve and its computations, Conversion of UH of different durations

## Module -4

**Irrigation:** Definition. Benefits and ill effects of irrigation. System of irrigation: surface and ground water, flow irrigation, lift irrigation, Bandhara irrigation.

**Water Requirements of Crops:** Duty, delta and base period, relationship between them, factors affecting duty of water crops and crop seasons in India, irrigation efficiency, frequency of irrigation.

L2, L4

## Module -5

**Canals:** Types of canals. Alignment of canals. Definition of gross command area, cultural command area, intensity of irrigation, time factor, crop factor. Unlined and lined canals. Standard sections. Design of canals by Lacey's and Kennedy's method. **Reservoirs:** Definition, investigation for reservoir site, storage zones determination of storage capacity using mass curves, economical height of dam.

L2, L4

**Course outcomes:** After studying this course, students will be able to:

- 1. Understand the importance of hydrology and its components.
- 2. Measure precipitation and analyze the data and analyze the losses in precipitation.
- 3. Estimate runoff and develop unit hydrographs.
- 4. Find the benefits and ill-effects of irrigation.
- 5. Find the quantity of irrigation water and frequency of irrigation for various crops.
- 6. Find the canal capacity, design the canal and compute the reservoir capacity.

## **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

## Text Books:

- 1) K. Subramanya, "Engineering Hydrology", Tata McGraw Hill Publishers, New Delhi.
- 2) Jayarami Reddy, "A Text Book of Hydrology", Lakshmi Publications, New Delhi.
- 3) Punmia and LalPandey, "Irrigation and Water Power Engineering" Lakshmi Publications, New Delhi.

- 1. H.M. Raghunath, "Hydrology", Wiley Eastern Publication, New Delhi.
- 2. Sharma R.K., "Irrigation Engineering and Hydraulics", Oxford & IBH Publishing Co., New Delhi.
- 3. VenTe Chow, "Applied Hydrology", Tata McGraw Hill Publishers, New Delhi.
- 4. Modi P.N "Water Resources and Water Power Engineering"-. Standard book house, Delhi.
- 5. Garg S.K, "Irrigation Engineering and Hydraulic Structures" Khanna publications,

New Delhi.

## Course Title: DESIGN OF BRIDGES

## As per Choice Based Credit System (CBCS) scheme]

#### **SEMESTER:VII**

| Subject Code                  | 17CV741     | IA Marks         | 40 |
|-------------------------------|-------------|------------------|----|
| Number of Lecture Hours/Week  | 03          | Exam Marks       | 60 |
| Total Number of Lecture Hours | 40          | Exam Hours       | 03 |
|                               | CREDITS -03 | Total Marks- 100 |    |

**Course objectives:** This course will enable students to understand the analysis and design of concrete Bridges.

#### Module -1

Introduction to bridges, classification, computation of discharge, linear waterway, economic span, afflux, scour depth

Design loads for bridges, introduction to I.R.C. loading standards, Load Distribution Theory, Bridge slabs, Effective width, Introduction to methods as per I.R.C.

## L1,L2

## Module -2

Design of Slab Bridges: Straight and skew slab bridges

## L2,L3

## Module -3

Design of T beam bridges(up to three girder only)

Proportioning of components, analysis of slab using IRC Class AA tracked vehicle, structural design of slab, analysis of cross girder for dead load & IRC Class AA tracked vehicle, structural design of cross girder, analysis of main girder using Courbon's method, calculation of dead load BM and SF, calculation of live load B M & S F using IRC Class AA Tracked vehicle. Structural design of main girder.

## L2,L3,L4

## Module -4

Other Bridges:

Design of Box culvert (Single vent only)

Design of Pipe culverts

L2,L3,L4

## Module -5

Substructures - Design of Piers and abutments,

Introduction to Bridge bearings, Hinges and Expansion joints.(No design)

## L2,L3,L4

**Course outcomes:** After studying this course, students will be able to:

- Understand the load distribution and IRC standards.
- Design the slab and T beam bridges.
- Design Box culvert, pipe culvert
- Use bearings, hinges and expansion joints and
- Design Piers and abutments.

## **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

## Text Books:

- 1. Johnson Victor. D, "Essentials of Bridge Engineering", Oxford Publishing Company.
- 2. N Krishna Raju, "Design of Bridges, Oxford and IBH publishing company
- 3. T R Jagadeesh and M A Jayaram, "Design of bridge structures", Prentice Hall of India

- 1. Jain and Jaikrishna, "Plain and Reinforced Concrete", Vol.2., Nem Chand Brothers.
- 2. Standard specifications and code of practice for road bridges, IRC section I,II, III and IV.
- 3. "Concrete Bridges", The Concrete Association of India

## Course Title: GROUND WATER & HYDRAULICS

## [As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                  | 17CV742      | IA Marks    | 40    |
|-------------------------------|--------------|-------------|-------|
| Number of Lecture Hours/Week  | 03           | Exam Marks  | 60    |
| Total Number of Lecture Hours | 40           | Exam Hours  | 03    |
|                               | CREDITS - 03 | Total Marks | s-100 |

**Course objectives:** This course will enable students

• To characterize the properties of ground water and aquifers.

- To quantify the ground water flow.
- To locate occurrence of ground water and augment ground water resources.
- To synthesize ground water development methods.

#### Module -1

**Introduction:** Importance, vertical distribution of subsurface water, occurrence in different types of rocks and soils, definitions-aquifers, aquifuge, aquitard, aquiclude, confined and Unconfined aquifers.

## L1, L2

## Module -2

**Fundamentals of Ground Water Flow:** Aquifer parameters, specific yield and specific retention, porosity, storage coefficient, derivation of the expression, Darcy's law, hydraulic conductivity, coefficient of permeability and intrinsic permeability, transmissibility, permeability in isotropic, unisotropic layered soils, steady one dimensional flow: cases with recharge.

## L2, L3

## Module -3

Well Hydraulics: Steady Flow, Radial flow in confined and unconfined aquifers,

pumping test Unsteady Flow, General equation, derivation; thesis method, Cooper

and Jacob method, Chow's method, solution of unsteady flow equations, leaky

aquifers (only introduction), interference of well, image well theory.

## L2, L3, L4

## Module -4

**Ground Water Exploration:** Seismic method, electrical resistively method, Geophysical techniques, electrical logging, radioactive logging, induction logging, sonic and fluid logging.

## Module -5

Ground Water Development: Types of wells, methods of construction, tube well

design, dug wells, pumps for lifting water, working principles, power requirement,

Conjunctive use, necessity, techniques and economics.

Ground Water Recharge: Artificial recharge, groundwater runoff

L2, L3

**Course outcomes:** After studying this course, students will be able to:

- Find the characteristics of aquifers.
- Estimate the quantity of ground water by various methods.
- Locate the zones of ground water resources.
- Select particular type of well and augment the ground water storage.

## **Program Objectives:**

- 3. Engineering knowledge
- 4. Problem analysis
- 5. Interpretation of data

#### **Text Books:**

- 1. H.M. Raghunath, "Ground Water", Wiley Eastern Publication, New Delhi.
- 2. K. Todd, "Ground Water Hydrology", Wiley and Sons, New Delhi.
- 3. Bower. H., "Ground Water Hydrology" McGraw Hill, New Delhi.

- 1. Garg Satya Prakash, "Ground Water and Tube Wells", Oxford and IBH, New Delhi.
- 2. W. C. Walton, "Ground Water Resources and Evaluation" McGraw Hill, Delhi.
- 3. Michel, D. M., Khepar, S. D., Sondhi, S. K., "Water Wells and Pumps" McGraw Hill, Delhi.

## **Course Title: DESIGN CONCEPT OF BUILDING SERVICES**

## As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                         | 17CV743     | IA Marks         | 40 |
|--------------------------------------|-------------|------------------|----|
| Number of Lecture Hours/Week         | 03          | Exam Marks       | 60 |
| <b>Total Number of Lecture Hours</b> | 40          | Exam Hours       | 03 |
|                                      | CREDITS -03 | Total Marks- 100 |    |

**Course Objectives:** This course will enable students to

- 1. learn the importance of sanitation, domestic water supply, plumbing and fire services
- 2. Understand the concepts of heat, ventilation and air conditioning
- 3. Develop technical and practical knowledge in Building Services.

#### Module -1

#### Water Supply, Drainage and Solid Waste Disposal:

Water requirements for different types of buildings, simple method of removal of impurities, water saving practices and their potential Service connection from mains, sump and storage tank, types and sizes of pipes, special installation in multistoried buildings. Material, types of fixtures and fitting for a contemporary bathroom– taps – quarter turn, half turn, ceramic, foam flow etc, hot water mixer, hand shower Rainwater harvesting to include roof top harvesting, type of spouts, sizes of rainwater pipes and typical detail of a water harvesting pit

Principles of drainage, surface drainage, shape and sizes of drains and sewers, storm water over flow chambers, methods of laying and construction of sewers

Approaches for solid waste management, Solid wastes collection and removal from buildings. On-site processing and disposal methods

## L1,L2

#### Module -2

## Heat Ventilation and Air Conditioning (HVAC):

Behaviour of heat propagation, thermal insulating materials and their co-efficient of thermal conductivity. General methods of thermal insulation: Thermal insulation of roofs, exposed walls. Ventilation: Definition and necessity, system of ventilation. Principles of air conditioning, Air cooling, Different systems of ducting and distribution, Essentials of air-conditioning system.

L1,L2

## Module -3

## **Electrical and Fire Fighting Services:**

Electrical systems, Basics of electricity, single/Three phase supply, protective devices in electrical installation, Earthing for safety, Types of earthing, ISI Specifications. Electrical installations in buildings, Types of wires,

Wiring systems and their choice , planning electrical wiring for building, Main and

distribution boards, Principles of illumination,

Classification of buildings based on occupancy, causes of fire and spread of fire, Standard fire, Fire fighting, protection and fire resistance, Firefighting equipment and different methods of fighting fire., means of escape, alarms, etc., Combustibility of materials, Structural elements and fire resistance, Fire escape routes and elements, planning and design. Wet risers, dry risers, sprinklers, heat detector, smoke detectors, fire dampers, fire doors, etc.

Provisions of NBC.

L1,L2,L3

## Module -4

## Plumbing and Fire Fighting Layout of Simple Buildings:

Application of above studies in preparing layout and details - Plumbing layout of residential and public buildings, Fire fighting layout, Reflected ceiling plan of smoke detectors / sprinklers, etc.

L2,L3

## Module -5

**Engineering Services:** engineering services in a building as a system, Lifts, escalators, cold and hot water systems, waste water systems and electrical systems.

Pumps and Machineries: Reciprocating, Centrifugal, Deep well, Submersible, Automatic pumps, Sewerage pumps, Compressors, Vacuum pump – their selection, installation and maintenance – Hot water boilers – Classification and types of lifts, lift

codes, rules structural provision: escalators, their uses, types and sizes, safety norms to be adopted – Social features required for physically handicapped and elderly, DC/AC motors, Generators,

**Building Maintenance**: Preventive and protective maintenance, Scheduled and contingency maintenance planning, M.I.S. for building maintenance. Maintenance standards. Economic maintenance decisions.

L1,L2,L3

**Course Outcomes:** After studying this course, students will be able to:

- 1. Describe the basics of house plumbing and waste water collection and disposal.
- 2. Discuss the safety and guidelines with respect to fire safety.
- 3. Describe the issues with respect to quantity of water, rain water harvesting and roof top harvesting.

4. Understand and implement the requirements of thermal comfort in buildings **Program Objectives:** 

- 1. Engineering knowledge
- 2. Problem analysis
- 3. Interpretation of data

- National Building Code
- Charangith shah, Water supply and sanitary engineering, Galgotia publishers.
- Kamala & DL Kanth Rao, Environmental Engineering, Tata McGraw Hill publishing co. Ltd.
- Technical teachers Training Institute (Madras), Environmental Engineering, Tata McGraw Hill publishing Co. Ltd.
- M.David Egan, Concepts in Building Fire Safety.
- O.H.Koenigsberger, "Manual of Tropical Housing and Building", Longman Group United Kingdom
- V.K.Jain, Fire Safety In Building 2edition, New Age International Publishers
- E.G.Butcher, Smoke control in Fire-safety Design.
- E.R.Ambrose, Heat pumps and Electric Heating, John and Wiley and Sons Inc, New York
- Handbook for Building Engineers in Metric systems, NBC, New Delhi

| <b>Course Title</b> | : STRUCTURAL | , DYNAMICS |
|---------------------|--------------|------------|
|---------------------|--------------|------------|

## As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                  | 17CV744 | IA Marks        | 40 |
|-------------------------------|---------|-----------------|----|
| Number of Lecture Hours/Week  | 03      | Exam Marks      | 60 |
| Total Number of Lecture Hours | 40      | Exam Hours      | 03 |
| CREDITS -03                   |         | Total Marks- 10 | 0  |

**Course Objectives:** This course will enable students to;

- 1. Understand the behaviour of structure especially building to various dynamic loads: such as wind, earthquake, machine vibration and ambient vibration
- 2. Basic understanding of structural analysis and knowledge of engineering mathematics.
- 3. Understand response of a single degree of freedom system to dynamic excitation and Vibration Control Techniques.

#### Module -1

Introduction: Introduction to structural dynamics, brief history of vibration, Basic definitions, vibration of SDOF (Single Degree of Freedom) systems, undamped, Damped, Free vibrations, equivalent viscous damping, Logarithmic decrement

## L1,L2

## Module -2

Forced vibrations of SDOF system, Response of undamped and damped system subjected to harmonic loading, response to SDOF subject to harmonic base excitation, Duhamel's integral, response to general system of loading, dynamic load factor, response spectrum.

## L1,L2,L3

#### Module -3

Free vibration of MDOF (Multi Degree Freedom System), Natural frequencies, Normal modes, Orthogonality of normal modes, Eigen Values Shear buildings modeled as MDOF systems. Free vibrations, Natural frequencies,

## L1,L2,L3

#### Module -4

Forced vibrations, Motion of shear buildings, Model Superposition Method, Response to shear buildings, Base motion, Harmonic fixed excitation.

Damped motion of shear buildings, Equations for damped shear buildings, uncoupled damped equations, Conditions for damping uncoupled.

## Module -5

Dynamic analysis of base stuffiness matrices, Lumped mass and consistent mass formulation, Equations of motion.

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 1. Apply knowledge of mathematics, science, and engineering by developing the equations of motion for vibratory systems and solving for the free and forced response.
- 2. Basic understanding of fundamental analysis methods for dynamic systems Interpret dynamic analysis results for design, analysis and research purposes
- 3. Apply structural dynamics theory to earthquake analysis, response, and design of structures

## **Program Objectives:**

- 1. Engineering knowledge
- 2. Problem analysis
- 3. Interpretation of data

## Text Books:

- Anil K Chopra, "Structural Dynamics", PHI Publications
- Mukobadhyay, "Vibrations, Structural Dynamics", Oxford IBH Publications
- Vinod Husur, **"Earth Quake resistant design of building structures**", WILE EASTERN India Publications

- V K Mac Subramanian, "Elementary structural dynamics", Danpatra Publications
- Mario Poz, "Structural Dynamics", CBS publications.
- Manik A Selvam, "Structural Dynamics", Danpatra publications

## **Course Title: URBAN TRANSPORTATION AND PLANNING**

## As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                  | 17CV751 | IA Marks        | 40 |
|-------------------------------|---------|-----------------|----|
| Number of Lecture Hours/Week  | 03      | Exam Marks      | 60 |
| Total Number of Lecture Hours | 40      | Exam Hours      | 03 |
| CREDITS -03                   |         | Total Marks- 10 | 0  |

#### **Course Objectives:** This course will enable students to;

- 1. Understand and apply basic concepts and methods of urban transportation planning.
- 2. Apprise about the methods of designing, conducting and administering surveys to provide the data required for transportation planning.
- 3. Understand the process of developing an organized mathematical modelling approach to solve select urban transportation planning problem.
- 4. Excel in use of various types of models used for travel forecasting, prediction of future travel patterns.

#### Module -1

**Urban transport planning:** Urbanization, urban class groups, transportation problems and identification, impacts of transportation, urban transport system planning process, modeling techniques in planning. Urban mass transportation systems: urban transit problems, travel demand, types of transit systems, public, private, para-transit transport, mass and rapid transit systems, BRTS and Metro rails, capacity, merits and comparison of systems, coordination, types of coordination.

## L1,L2,L3

#### Module -2

**Data Collection And Inventories:** Collection of data – Organisation of surveys and Analysis, Study Area, Zoning, Types and Sources of Data, Road Side Interviews, Home Interview Surveys, Commercial Vehicle Surveys, Sampling Techniques, Expansion Factors, Accuracy Checks, Use of Secondary Sources, Economic data – Income – Population – Employment – Vehicle Owner Ship.

## L1,L2,L3

#### Module -3

**Trip Generation & Distribution**: UTPS Approach, Trip Generation Analysis: Zonal Models, Category Analysis, Household Models, Trip Attraction models, Commercial Trip Rates; Trip Distribution by Growth Factor Methods. **Problems on above** 

L3,L4

Module -4

**Trip Distribution**: Gravity Models, Opportunity Models, Time Function Iteration Models. Travel demand modeling: gravity model, opportunity models, Desire line diagram. Modal split analysis. **Problems on above** 

## L2,L3,L4,L5

## Module -5

**Traffic Assignment:** Diversion Curves; Basic Elements of Transport Networks, Coding, Route Properties, Path Building Criteria, Skimming Tree, All-or-Nothing Assignment, Capacity Restraint Techniques, Reallocation of Assigned Volumes, Equilibrium Assignment. Introduction to land use planning models, land use and transportation interaction.

L2,L3,L4,L5

**Course outcomes:** After studying this course, students will be able to:

- 1. Design, conduct and administer surveys to provide the data required for transportation planning.
- 2. Supervise the process of data collection about travel behavior and analyze the data for use in transport planning.
- 3. Develop and calibrate modal split, trip generation rates for specific types of land use developments.
- 4. Adopt the steps that are necessary to complete a long-term transportation plan. **Program Objectives:** 
  - 1. Engineering knowledge
  - 2. Problem analysis
  - 3. Interpretation of data

## Text Books:

- Kadiyali.L.R., 'Traffic Engineering and Transportation Planning', Khanna Publishers, New Delhi.
- Hutchinson, B.G, 'Introduction to Urban System Planning', McGraw Hill.
- Khisty C.J., 'Transportation Engineering An Introduction' Prentice Hall.
- Papacostas, 'Fundamentals of Transportation Planning', Tata McGraw Hill.

- Mayer M and Miller E, 'Urban Transportation Planning: A decision oriented Approach', McGraw Hill.
- Bruton M.J., 'Introduction to Transportation Planning', Hutchinson of London.
- Dicky, J.W., 'Metropolitan Transportation Planning', Tata McGraw Hill.

of avoidance of progressive collapse.

**Course Outcomes:** After studying this course, students will be able to: 1. Use modular construction, industrialised construction 2. Design prefabricated elements 3. Design some of the prefabricated elements 4. Use the knowledge of the construction methods and prefabricated elements in buildings **Program Objectives:** Engineering knowledge Problem analysis Interpretation of data **Text Books:** CBRI, Building materials and components, India, 1990 • Gerostiza C.Z., Hendrikson C. and Rehat D.R.," Knowledge based process • planning for construction and manufacturing", Academic Press Inc., 1994 **Reference Books:** Koncz T., "Manual of precast concrete construction", Vol.I, II and III, Bauverlag, • GMBH,1976. "Structural design manual", Precast concrete connection details, Society for the ٠ studies in the use of precast concrete, Netherland Betor Verlag, 2009

## **Course Title: REHABILITATION AND RETROFITTING OF STRUCTURES**

## As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                  | 17CV753 | IA Marks         | 40 |
|-------------------------------|---------|------------------|----|
| Number of Lecture Hours/Week  | 03      | Exam Marks       | 60 |
| Total Number of Lecture Hours | 40      | Exam Hours       | 03 |
| CREDITS -03                   |         | Total Marks- 100 |    |

**Course Objectives:** This course will enable students to;

- Investigate the cause of deterioration of concrete structures.
- Strategise different repair and rehabilitation of structures.
- Evaluate the performance of the materials for repair

Module -1

**General**: Introduction and Definition for Repair, Retrofitting, Strengthening and rehabilitation. Physical and Chemical Causes of deterioration of concrete structures, Evaluation of structural damages to the concrete structural elements due to earthquake.

## L1,L2

#### Module -2

**Damage Assessment:** Purpose of assessment, Rapid assessment, Investigation of damage, Evaluation of surface and structural cracks, Damage assessment procedure, destructive, non-destructive and semi destructive testing systems

## L1,L2

## Module -3

**Influence on Serviceability and Durability:** Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings, and cathodic protection.

## L1,L2,L3

#### Module -4

**Maintenance and Retrofitting Techniques:** Definitions: Maintenance, Facts of Maintenance and importance of Maintenance Need for retrofitting, retrofitting of structural members i.e., column and beams by Jacketing technique, Externally bonding(ERB) technique, near surface mounted (NSM) technique, External posttensioning, Section enlargement and guidelines for seismic rehabilitation of existing building

## L1,L2,L3

Module -5

**Materials for Repair and Retrofitting:** Artificial fibre reinforced polymer like CFRP, GFRP, AFRP and natural fiber like Sisal and Jute. Adhesive like, Epoxy Resin, Special concretes and mortars, concrete chemicals, special elements for accelerated strength gain, Techniques for Repair: Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Gunite and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 1. Understand the cause of deterioration of concrete structures.
- 2. Able to assess the damage for different type of structures
- 3. Summarize the principles of repair and rehabilitation of structures
- 4. Recognize ideal material for different repair and retrofitting technique

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. Sidney, M. Johnson, "Deterioration, Maintenance and Repair of Structures"
- 2. Denison Campbell, Allen & Harold Roper, "Concrete Structures Materials, Maintenance and Repair"- Longman Scientific and Technical.

- 1. R.T.Allen and S.C. Edwards, "Repair of Concrete Structures"-Blakie and Sons
- 2. Raiker R.N., "Learning for failure from Deficiencies in Design, Construction and Service"- R&D Center (SDCPL).

## **Course Title: REINFORCED EARTH STRUCTURES**

## As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VII

| Subject Code                         | 17CV754 | IA Marks         | 40 |
|--------------------------------------|---------|------------------|----|
| Number of Lecture Hours/Week         | 03      | Exam Marks       | 60 |
| <b>Total Number of Lecture Hours</b> | 40      | Exam Hours       | 03 |
| CREDITS -03                          |         | Total Marks- 100 | )  |

**Course Objectives:** This course will enable students to;

- 1. Create an understanding of the latest technique such as reinforcing the soil;
- 2. Analyze the concept of RE so as to ascertain stability of RE structures;
- 3. Understand the different reinforcing materials that can be used efficiently in soils.
- 4. Understand design concepts of different RE structures including introductory concepts of Foundations resting of RE soil bed.

#### Module -1

**Basics of Reinforced Earth Construction:** Definition, Historical Background, Components, Mechanism and Concept, Advantages and Disadvantage of reinforced earth Construction, Sandwich technique for clayey soil.

**Geosynthetics and Their Functions:** Historical developments, Recent developments, manufacturing process woven &non-woven, Raw materials –Classification based on materials type – Metallic and Non-metallic, Natural and Man-made, Geosynthetics

**Properties and Tests on Materials** Properties – Physical, Chemical, Mechanical, Hydraulic, Endurance and Degradation requirements, Testing & Evaluation of properties

## L1,L2,L3

#### Module -2

**Design of Reinforced Earth Retaining Walls:** Concept of Reinforced earth retaining wall, Internal and external stability, Selection of materials, Typical design problems

**Soil Nailing Techniques:** Concept, Advantages & limitations of soil nailing techniques, comparison of soil nailing with reinforced soil, methods of soil nailing, Construction sequence, Components of system, Design aspects and precautions to be taken

## L1,L2,L3,L4

#### Module -3

**Design of Reinforced Earth Foundations:** Modes of failure of foundation, Determination of force induced in reinforcement ties – Location of failure surface, tension failure and pull out resistance, length of tie and its curtailment, Bearing capacity improvement in soft soils, General guidelines.

## Module -4

**Geosynthetics for Roads and Slopes:** Roads - Applications to Temporary and Permanent roads, Role of Geosynthetic in enhancing properties of road, control of mud pumping, Enhancing properties of subgrade, Design requirements Slopes – Causes for slope failure, Improvement of slope stability with Geosynthetic, Drainage requirements, Construction technique. Simple Numerical Stability Checking Problems on Reinforced Slopes

## L2,L3,L4

## Module -5

**GEOSYNTHETICS - FILTER, DRAIN AND LANDFILLS:** Filter & Drain – Conventional granular filter design criteria, Geosynthetic filter design requirements, Drain and filter properties, Design criteria – soil retention, Geosynthetic permeability, anticlogging, survivability and durability (No Numerical Problems)

Landfills – Typical design of Landfills – Landfill liner & cover, EPA Guidelines, Barrier walls for existing landfills and abandoned dumps (No Numerical Problems)

## L2,L3,L4

**Course outcomes:** After studying this course, students will be able to:

- 1. identify, formulate reinforced earth techniques that are suitable for different soils and in different structures;
- 2. understand the laboratory testing concepts of Geosynthetics
- 3. design RE retaining structures and Soil Nailing concepts
- 4. Determine the load carrying capacity of Foundations resting on RE soil bed.
- 5. asses the use of Geosynthetics in drainage requirements and landfill designs

## **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

## **Text Books:**

- 1. Koerner. R.M, "Design with Geosynthetics", Prince Hall Publications
- 2. Koerner. R.M. & Wesh, J.P, "Construction and Geotechnical Engineering using synthetic fabrics", Wiley Inter Science, New York,.
- 3. SivakumarBabu G. L., "An introduction to Soil Reinforcement and Geosynthetics", Universities Press, Hyderabad

| 12. Determination Nitrates by s  |  |                      |                                    |
| 13. Determination of Iron & Ma   | inganese.                              |                      |                                    |
| 14. Determination of COD. (Den   |  |                      |                                    |
| 15.Air Quality Monitoring (A   | Ambient, stack mon:<br>(Demonstration) |                      | pollution)                         |
| 16.Determination of Sound by location(Demonstration)                                 | Sound level meter a                    | at different         |                                    |
| Course Outcomes: After studying  | this course, studen                    | ts will be able to:  |                                    |
| 1. Acquire capability to conduct e   | xperiments and esti                    | mate the concentra   | tion of differen                   |
| parameters.  | and a and discourse 1.                 | and on the means     | of on ol                           |
| 2. Compare the result with standa  | arus and discuss ba                    | seu on the purpose   | of analysis.                       |

- 3. Determine type of treatment, degree of treatment for water and waste water.
- 4. Identify the parameter to be analyzed for the student project work in environmental stream.

## **Program Objectives:**

- 1. Evaluation of the test results and assesses the impact on water and waste water treatment.
- 2. Train student to undertake student project work in 8<sup>th</sup> semester in the field of environmental engineering.

## Question paper pattern:

- 1. Two experiments shall be asked from the above set
- 2. One experiment to be conducted and for the other student should write detailed procedure.

- 1. Lab Manual, ISO 14001 Environmental Management, Regulatory Standards for Drinking Water and Sewage disposal
- 2. Clair Sawyer and Perry McCarty and Gene Parkin, "Chemistry for Environmental Engineering and Science", McGraw-Hill Series in Civil and Environmental Engineering

## Course Title: COMPUTER AIDED DETAILING OF STRUCTURES

## As per Choice Based Credit System (CBCS) scheme]

# 8<sup>th</sup> Semester

## **Course Title: QUANTITY SURVEYING AND CONTRACTS MANAGEMENT** As per Choice Based Credit System (CBCS) scheme

| S. | SEMESTER:VIII |  |
|----|---------------|--|
|    |               |  |

| Subject Code                         | 17CV81      | IA Marks         | 40 |
|--------------------------------------|-------------|------------------|----|
| Number of Lecture Hours/Week         | 04          | Exam Marks       | 60 |
| <b>Total Number of Lecture Hours</b> | 50          | Exam Hours       | 03 |
|                                      | CREDITS -04 | Total Marks- 100 |    |

**Course objectives:** This course will enable students to;

- 1. Estimate the quantities of work, develop the bill of quantities and arrive at the Cost of civil engineering Project
- 2. Understand and apply the concept of Valuation for Properties
- 3. Understand, Apply and Create the Tender and Contract document.

#### Module -1

Quantity Estimation for Building; study of various drawing attached with estimates, important terms, units of measurements, abstract, Types of estimates - Approximate, detailed, supplementary and revised, Estimation of building - Short wall and long wall method - centre line method.

Estimate of R.C.C structures including Slab, beam, column, footings, with bar bending schedule.

L2,L3

#### Module -2

Estimate of Steel truss, manhole and septic tanks.

Quantity Estimation for Roads: Road estimation, earthwork fully in banking, cutting, partly cutting and partly Filling, Detailed estimate and cost analysis for roads.

L1,L2,L3

L1,L2,L3

## Module -3

Specification for Civil Engineering Works: Objective of writing specifications essentials in specifications, general and detail specifications of different items of works in buildings,

Analysis of Rates : Factors Affecting Cost of Civil Works, Concept of Direct Cost, Indirect Cost and Project Cost

Rate analysis and preparation of bills, Data analysis of rates for various items of Works, Sub-structure components, Rate analysis for R.C.C. slabs, columns and beams.

#### Module-4

Contract Management-Tender and its Process: Invitation to tender, Prequalification, administrative approval & Technical sanction. Bid submission and Evaluation process. Contract Formulation: covering Award of contract, letter of intent, letter of acceptance and notice to proceed. Features / elements of standard Tender document (source: PWD / CPWD / International Competitive Bidding - NHAI / NHEPC / NPC).

Law of Contract as per Indian Contract act 1872, Types of Contract, Entire contract, Lump sum contract, Item rate, % rate, Cost plus with Target, Labour, EPC and BOT, Sub Contracting.

Contract Forms : FIDIC contract Forms , CPWD , NHAI , NTPC , NHEPC

#### Module -5

L1,L2,L3

Contract Management-Post award : Basic understanding on definitions, Performance security, Mobilization and equipment advances, Secured Advance, Suspension of work, Time limit for completion, Liquidated damages and bonus, measurement and payment, additions and alterations or variations and deviations, breach of contract, Escalation, settlement of account or final payment, claims, Delay's and Compensation, Disputes & its resolution mechanism, Contract management and administration

Valuation: Definitions of terms used in valuation process, Cost, Estimate, Value and its relationship, Capitalized value. Concept of supply and demand in respect to properties ( land, building, facilities'), freehold and lease hold, Sinking fund, depreciation-methods of estimating depreciation, Outgoings, Process and methods of valuation : Rent fixation,

valuation for mortgage, valuation of land.

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 1. Prepare detailed and abstract estimates for roads and building.
- 2. Prepare valuation reports of buildings.
- 3. Interpret Contract document's of domestic and international construction works

## **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

## **Text Books:**

- 1. Datta B.N., "Estimating and costing", UBSPD Publishing House, New Delhi
- 2. B.S. Patil, " Civil Engineering Contracts and Estimates", Universities Press
- 3. M. Chakraborthi; "Estimation, Costing and Specifications", Laxmi Publications
- 4. MORTH Specification for Roads and Bridge Works IRC New Delhi

- 1. Kohli D.D and Kohli R.C, "Estimating and Costing",12 th Edition, S.Chand Publishers, 2014.
- 2. Vazirani V.N and Chandola S.P, " Estimating and costing", Khanna Publishers, 2015.
- 3. Rangwala, C. "Estimating, Costing and Valuation", Charotar Publishing House Pvt. Ltd., 2015.
- 4. Duncan Cartlidge, "Quantity Surveyor's Pocket Book", Routledge Publishers, 2012.
- 5. Martin Brook, "Estimating and Tendering for Construction Work", A Butterworth-Heinemann publishers, 2008.
- 6. Robert L Peurifoy , Garold D. Oberlender , " Estimating Construction Costs" 5ed , Tata McGraw-Hill , New Delhi
- 7. David Pratt, "Fundamentals of Construction Estimating" 3ed,
- 8. PWD Data Book ,CPWD Schedule of Rates (SoR). and NH SoR Karnataka
- 9. FIDIC Contract forms
- 10.B.S. Ramaswamy " Contracts and their Management" 3ed , Lexis Nexis ( a division of Reed Elsevier India Pvt Ltd)

## Course Title: DESIGN OF PRE STRESSED CONCRETE ELEMENTS As per Choice Based Credit System (CBCS) scheme]

|                               | SEMESIEK: VI | 11              |    |
|-------------------------------|--------------|-----------------|----|
| Subject Code                  | 17CV82       | IA Marks        | 40 |
| Number of Lecture Hours/Week  | 04           | Exam Marks      | 60 |
| Total Number of Lecture Hours | 50           | Exam Hours      | 03 |
| CREDITS -04                   |              | Total Marks- 10 | 0  |

**Course objectives:** This course will enable students to learn Design of Pre Stressed Concrete Elements

#### Module -1

**Introduction and Analysis of Members:** Concept of Prestressing - Types of Prestressing - Advantages - Limitations –Prestressing systems - Anchoring devices - Materials - Mechanical Properties of high strength concrete - high strength steel - Stress-Strain curve for High strength concrete.

Analysis of members at transfer - Stress concept - Comparison of behavior of reinforced concrete - prestressed concrete - Force concept - Load balancing concept - Kern point - Pressure line.

#### Module -2

**Losses in Prestress:** Loss of Prestress due to Elastic shortening, Friction, Anchorage slip, Creep of concrete, Shrinkage of concrete and Relaxation of steel - Total Loss. Deflection and Crack Width Calculations of Deflection due to gravity loads - Deflection due to prestressing force -Total deflection - Limits of deflection - Limits of span-to-

#### Module -3

**Design of Sections for Flexure:** Analysis of members at ultimate strength - Preliminary Design - Final Design for Type 1members

#### Module -4

**Design for Shear:** Analysis for shear - Components of shear resistance - Modes of Failure - Limit State of collapse for shear - Design of transverse reinforcement.

#### Module -5

**Composite Sections:** Types of composite construction - Analysis of composite sections - Deflection –Flexural and shear strength of composite sections.

#### L1,L2,L3

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

effective depth ratio -Calculation of Crack Width - Limits of crack width.

- Understand the requirement of PSC members for present scenario.
- Analyse the stresses encountered in PSC element during transfer and at working.
- Understand the effectiveness of the design of PSC after studying losses
- Capable of analyzing the PSC element and finding its efficiency.
- Design PSC beam for different requirements.

## L1,L2

#### L1,L2

L1,L2,L3

#### Course Title: EARTHQUAKE ENGINEERING As per Choice Based Credit System (CBCS) scheme] SEMESTER:VIII

| Subject Code                         | 17CV831     | IA Marks     | 40  |
|--------------------------------------|-------------|--------------|-----|
| Number of Lecture Hours/Week         | 03          | Exam Marks   | 60  |
| <b>Total Number of Lecture Hours</b> | 40          | Exam Hours   | 03  |
|                                      | CREDITS -03 | Total Marks- | 100 |

**Course Objectives:** This course will enable students to learn about

- 1. Fundamentals of engineering seismology
- 2. Irregularities in building which are detrimental to its earthquake performance
- 3. Different methods of computation seismic lateral forces for framed and masonry structures
- 4. Earthquake resistant design requirements for RCC and Masonry structures
- 5. Relevant clauses of IS codes of practice pertinent to earthquake resistant design of structures

#### Module -1

**Engineering Seismology:** Terminologies (Focus, Focal depth, Epicenter, etc.); Causes of Earthquakes; Theory of plate tectonics; Types and characteristics faults; Classification of Earthquakes; Major past earthquakes and their consequences; Types and characteristics of seismic waves; Magnitude and intensity of earthquakes; local site effects; Earthquake ground motion characteristics: Amplitude, frequency and duration; Seismic zoning map of India; (Problems on computation of wave velocities. Location of epicenter, Magnitude of earthquake)

## L1,L2,L3

L1,L2,L3

## Module -2

**Response Spectrum:** Basics of structural dynamics; Free and forced vibration of SDOF system; Effect of frequency of input motion and Resonance; Numerical evaluation of response of SDOF system (Linear acceleration method), Earthquake Response spectrum: Definition, construction, Characteristics and application; Elastic design spectrum.

#### Module -3

Module -4

**Seismic Performance of Buildings and Over View of IS-1893 (Part-1):** Types of damages to building observed during past earthquakes; Plan irregularities; mass irregularity; stiffness irregularity; Concept of soft and weak storey; Torsional irregularity and its consequences; configuration problems; continuous load path; Architectural aspects of earthquake resistant buildings; Lateral load resistant systems. Seismic design philosophy; Structural modeling; Code based seismic design methods.

#### L1,L2,L3

**Determination of Design Lateral Forces:** Equivalent lateral force procedure and dynamic analysis procedure. Step by step procedures for seismic analysis of RC buildings using Equivalent static lateral force method and response spectrum methods (maximum of 4 storeys and without infill walls).

## L2,L3,L4

Module -5 Earthquake Resist

**Earthquake Resistant Analysis and Design of RC Buildings:** Typical failures of RC frame structures, Ductility in Reinforced Concrete, Design of Ductile Reinforced Concrete Beams, Seismic Design of Ductile Reinforced Concrete column, Concept of weak beam-strong column, Detailing of Beam-Column Joints to enhance ductility, Detailing as per IS-13920. Retrofitting of RC buildings

**Earthquake Resistant Design of Masonry Buildings:** Performance of Unreinforced, Reinforced, Infill Masonry Walls, Box Action, Lintel and sill Bands, elastic properties of structural masonry, lateral load analysis, Recommendations for Improving performance of Masonry Buildings during earthquakes; Retrofitting of Masonry buildings.

L2,L3,L4

**Course outcomes:** After studying this course, students will be able to:

- 1. Acquire basic knowledge of engineering seismology
- 2. Develop response spectra for a given earthquake time history and its implementation to estimate response of a given structure.
- 3. Understanding of causes and types of damages to civil engineering structures during different earthquake scenarios
- 4. Analyze multi-storied structures modeled as shear frames and determine lateral force distribution due to earthquake input motion using IS-1893 procedures.
- 5. Comprehend planning and design requirements of earthquake resistant features of RCC and Masonry structures thorough exposure to different IS-codes of practices.

## **Program Objectives:**

- 1. Engineering knowledge
- 2. Problem analysis
- 3. Interpretation of data

## **Text Books:**

- 2. P. N. Modi, "Irrigation, Water Resources and Water Power", Standard Book House, New Delhi.

## **Course Title: PAVEMENT DESIGN** As per Choice Based Credit System (CBCS) scheme]

#### SEMESTER:VIII Subject Code 17CV833 IA Marks 40 Number of Lecture Hours/Week 03 60 **Exam Marks** 40 **Total Number of Lecture Hours** Exam Hours 03 CREDITS -03 Total Marks-100

**Course objectives:** This course will enable students to

- 1. Gain knowledge about the process of collecting data required for design, factors affecting pavement design, and maintenance of pavement.
- 2. Excel in the path of analysis of stress, strain and deflection in pavement.
- 3. Understand design concepts of flexible pavement by various methods (CBR, IRC 37-2001, Mcleods, Kansas ) and also the same of rigid pavement by IRC 58-2002
- 4. Understand the various causes leading to failure of pavement and remedies for the same.
- 5. Develop skills to perform functional and structural evaluation of pavement by suitable methods.

## Module -1

**Introduction**: Desirable characteristics of pavement, Types and components, Difference between Highway pavement and Air field pavement, Design strategies of variables, Functions of sub grade, sub base, Base course, surface course, comparison between Rigid and flexible pavement

Fundamentals of Design of Pavements: Stresses and deflections, Principle, Assumptions and Limitations of Boussinesq's theory, Burmister theory and problems on above

|           | L2, L3,L4 |
|-----------|-----------|
| Module -2 |           |

Design Factors: Design wheel load, contact pressure, Design life, Traffic factors, climatic factors, Road geometry, Subgrade strength and drainage, ESWL concept Determination of ESWL by equivalent deflection criteria, Stress criteria, EWL concept, and problems on above.

Flexible pavement Design: Assumptions, Mcleod Method, Kansas method, CBR method, IRC Method (old), CSA method using IRC-37-2001, problems on above

## L5,L6

#### Module -3

Flexible Pavement Failures, Maintenance and Evaluation: Types of failures, Causes, Remedial/Maintenance measures in flexible pavements, Functional Evaluation by Visual inspection and unevenness measurements, Structural evaluation by Benkleman beam deflection method, Falling weight deflectometer, GPR method. Design factors for runway pavements, Design methods for

Airfield pavement and problems on above

## Module -4

Types of stress, Analysis of Stresses, Westergaard's Stresses in Rigid Pavement : Analysis, Modified Westergaard equations, Critical stresses, Wheel load stresses, Warping stress, Frictional stress, combined stresses (using chart / equations), problems on above

Design of Rigid Pavement: Design of CC pavement by IRC: 58-2002 for dual and Tandem axle load, Reinforcement in slabs, Design of Dowel bars, Design of Tie bars, Design factors for Runway pavements, Design methods for airfield pavements, problems of the above

L4,L5,L6

Module -5

L4,L5

**Rigid Pavement Failures, Maintenance and Evaluation:** Types of failures, causes, remedial/maintenance measures in rigid pavements, Functional evaluation by Visual inspection and unevenness measurements, wheel load and its repetition, properties of subgrade, properties of concrete. External conditions, joints, Reinforcement, Requirements of joints, Types of joints, Expansion joint, contraction joint, warping joint, construction joint, longitudinal joint, Design of joints

L4,L5

#### **Course outcomes:** After studying this course, students will be able to:

- 1. Systematically generate and compile required data's for design of pavement (Highway & Airfield).
- 2. Analyze stress, strain and deflection by boussinesq's, burmister's and westergaard's theory.
- 3. Design rigid pavement and flexible pavement conforming to IRC58-2002 and IRC37-2001.
- 4. Evaluate the performance of the pavement and also develops maintenance statement based on site specific requirements.

#### **Program Objectives:**

- Engineering knowledge
- Problem analysis
- Interpretation of data

#### Text Books:

- 1. S K Khanna, C E G Justo, and A Veeraragavan, "Highway Engineering", Nem Chand & Brothers
- 2. L.R.Kadiyali and Dr.N.B.Lal, "Principles and Practices of Highway Engineering", Khanna publishers
- 3. Yang H. Huang, "Pavement Analysis and Design", University of Kentucky

- 1. Yoder & wit zorac, "Principles of pavement design", John Wiley & Sons.
- 2. Subha Rao, "Principles of Pavement Design".
- 3. R Srinivasa Kumar, "Pavement Design", University Press.
- 4. Relevant recent IRC codes

#### **Course Title: ADVANCED FOUNDATION DESIGN** As per Choice Based Credit System (CBCS) scheme] **GEMESTED**.VIII

|                               | Semesier:VIII |              |     |
|-------------------------------|---------------|--------------|-----|
| Subject Code                  | 17CV834       | IA Marks     | 40  |
| Number of Lecture Hours/Week  | 03            | Exam Marks   | 60  |
| Total Number of Lecture Hours | 40            | Exam Hours   | 03  |
|                               | CREDITS -03   | Total Marks- | 100 |

**Course objectives:** This course will enable students to

- 1. Gain knowledge of about advanced topics of foundation design and analyses, supplementing their comprehensive knowledge acquired in basic foundation engineering course (15CV53)
- 2. Develop profound understanding of shallow and deep foundation analyses
- 3. Develop understanding of choice of foundation design parameters
- 4. Learn about cause and effect of dynamic loads on foundation

## Module -1

General bearing capacity equation - Terzaghi's, Brinch Hansen's and Mayerhof's analyses, bearing capacity of footings according to BIS, eccentrically loaded footing, footing on layered soil, Settlement of shallow Foundations: Immediate, consolidation, & differential settlements. Principles of design of footing, Proportioning of footings for equal settlement.

## Module -2

Design of combined footings by Rigid method, Combined footings (rectangular & trapezoidal), strap footings. Types of rafts, bearing capacity & settlements of raft foundation, Design of raft foundation - Conventional rigid method, Elastic methods, Coefficient of sub-grade reaction, IS code (IS-2950) procedure

## Module -3

Introduction Necessity of pile foundations, Classification, Load bearing capacity of single pile by Static formula, Dynamic formula, Pile load test and Penetration tests. Introduction, Pile groups, group action of piles in sand and clay, group efficiency of piles, settlement of piles, negative skin friction, laterally loaded piles and under reamed piles.

## L1.L2.L3

L1,L2

L2,L3

## Module -4

Well Foundations: Introduction, Different shapes and characteristics of wells. Components of well foundation. Forces acting on well foundation. Sinking of wells. Causes and remedies of tilts and shifts.

Drilled Piers & Caissons: Introduction, construction, advantages and disadvantages of drilled piers. Design of open, pneumatic and floating caissons. Advantages and disadvantages of floating caissons.

## Module -5

Machine Foundations: Introduction, free and forced vibrations, Types of Machine foundations, degrees of freedom of a block foundation, general criteria for design of machine foundation, vibration analysis of a machine foundation, determination of natural frequency, vibration isolation and control.

## L1,L2,L3

L1,L2,L3

**Course outcomes:** After studying this course, students will be able to:

- 4. Estimate the size of isolated and combined foundations to satisfy bearing capacity and settlement criteria.
- 5. Estimate the load carrying capacity and settlement of single piles and pile groups including laterally loaded piles
- 6. Understand the basics of analysis and design principles of well foundation, drilled piers and caissons
- 7. Understand basics of analysis and design principles of machine foundations

| Progr | am Objectives:   |

|                               | CREDITS -02  | Total Marks- | 100 |

**Course objectives:** This course will enable students to get the field exposure and experience

#### Note: Internship / Professional Practice:

- 1. This shall be carried out by students in industry set-up related to the construction/ materials testing laboratories/research organizations/project management consulting firms/QS and QA organizations/ planning and design offices/Professional organisations like ACCE/ICI/INSTRUCT/RMCMA/QCI, PMI, CIDC etc. and other avenues related to the civil engineering domain in consultation and approval of internship guide/HOD /internship committees of the institutions.
- 2. The professional certification programs like ACCE(I)- SMP, ICI-BMTPC certifications, NSTRUCT-certifications, CIDC certifications, RMC-QCI's RMCPCS Certification Programs, RMCMA-NRMCA'S Concrete Technologist India(CTI) programs and such similar programs by professional bodies with adequate industry exposures at sites/RMC plants can be considered as Internship /Professional Practice with due approvals from the guide/HOD /internship committees of the institutions
- 3. The industry/organisation should issue certificates of internship offer and its completion. The offer letter should clearly have the nature of work to be done by the student and the supervisor's name and duration of internship.
- 4. The student shall make a midterm and final presentation of the activities undertaken during the first 6 weeks and at the end of 12th week of internship respectively, to a panel comprising internship guide, a senior faculty from the department and head of the department. Each student should submit the internship report at the end of semester with internship certificate.
- 5. Viva-Voce examination shall be conducted by a panel of examiners consisting of internship supervisor from industry or industry professional approved by university and internship guide from the institute.
- 6. The College shall facilitate and monitor the student internship program.
- 7. The internship should be completed during vacation after VI and VII semesters.

## **B.E: Electronics & Communication Engineering**

## Program Outcomes (POs)

At the end of the B.E program, students are expected to have developed the following outcomes.

- 1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
- 2. **Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of need for sustainable development.
- 8. **Ethics :** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

## Program Specific Outcomes (PSOs)

At the end of the B.E Electronics & Communication Engineering program, students are expected to have developed the following program specific outcomes.

- PSO1: Specify, design, build and test analog, digital and embedded systems for signal processing
- PSO2: Understand and architect wired and wireless analog and digital communication systems as per specifications, and determine their performance.

## <u>Note</u>

- 1. The Course Outcomes and RBT levels indicated for each course in the syllabus are indicative/suggestive. The faculty can set them appropriately according to their lesson plan.
- 2. The Question Paper format for the theory courses is as follows:

## Question Paper Pattern for Theory Courses (2017 Scheme):

- The question paper will have TEN questions.
- Each full question carries 20 marks.
- There will be two full questions (with a maximum of Four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.

### SCHEME OF TEACHING AND EXAMINATION B.E Electronics & Communication Engineering / Telecommunication Engineering (Common to Electronics & Communication and Telecommunication Engineering)

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed, if:

• The candidate has no pre – requisite knowledge.

 $\cdot$  The candidate has studied similar content course during previous semesters.

 $\cdot$  The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied Professional elective(s). Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives).

Selection of an open elective is not allowed, if:

 $\cdot$  The candidate has no pre – requisite knowledge.

• The candidate has studied similar content course during previous semesters.

 $\cdot$  The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied Professional elective(s).

Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

1. Internship/ Professional Practice: 4 Weeks internship to be completed between the (VI and VII semester vacation) and/or (VII and VIII semester vacation) period.

## B.E., III Semester, Electronics & Communication Engineering /Telecommunication Engineering

#### **ENGINEERING MATHEMATICS-III B.E., III Semester, Common to all Branches** [As per Choice Based Credit System (CBCS) Scheme] **Course Code** 17MAT31 **CIE Marks** 40 Number of Lecture 04 SEE Marks 60 Hours/Week **Total Number of** 50 (10 Hours per Module) **Exam Hours** 03 Lecture Hours Credits – 04 **Course Objectives:** This course will enable students to: • Introduce most commonly used analytical and numerical methods in the different engineering fields. • Learn Fourier series, Fourier transforms and Z-transforms, statistical methods, numerical methods. • Solve algebraic and transcendental equations, vector integration and calculus of variations. Module-1 Fourier Series: Periodic functions, Dirichlet's condition, Fourier Series of periodic functions with period $2\pi$ and with arbitrary period 2c. Fourier series of even and odd functions. Half range Fourier Series, practical harmonic analysis-Illustrative examples from engineering field. L1, L2, L4 Module-2 Fourier Transforms: Infinite Fourier transforms, Fourier sine and cosine transforms. Inverse Fourier transform. **Z-transform:** Difference equations, basic definition, z-transform-definition, Standard ztransforms, Damping rule, Shifting rule, Initial value and final value theorems (without proof) and problems, Inverse z-transform. Applications of z-transforms to solve difference equations. L2, L3, L4 Module-3 Statistical Methods: Review of measures of central tendency and dispersion. Correlation-Karl Pearson's coefficient of correlation-problems. Regression analysis-

lines of regression (without proof) –Problems **Curve Fitting:** Curve fitting by the method of least squares- fitting of the curves of the form, y = ax + b,  $y = ax^2 + bx + c$  and  $y = ae^{bx}$ .

**Numerical Methods:** Numerical solution of algebraic and transcendental equations by Regula- Falsi Method and Newton-Raphson method.

Module-4

**Finite differences**: Forward and backward differences, Newton's forward and backward interpolation formulae. Divided differences- Newton's divided difference formula. Lagrange's interpolation formula and inverse interpolation formula (all formulae without proof)-Problems

**Numerical integration:** Simpson's (1/3)<sup>th</sup> and (3/8)<sup>th</sup> rules, Weddle's rule (without proof) – Problems. L3

### Module-5

Vector integration: Line integrals-definition and problems, surface and volume<br/>integrals-definition, Green's theorem in a plane, Stokes and Gauss-divergence<br/>theorem(without proof) and problems.L3, L4Calculus of Variations: Variation of function and Functional, variational problems.<br/>Euler's equation, Geodesics, hanging chain, Problems.L2, L4

**Course outcomes:** On completion of this course, students are able to:

- Know the use of periodic signals and Fourier series to analyze circuits and system communications.
- Explain the general linear system theory for continuous-time signals and digital signal processing using the Fourier Transform and *z*-transform.
- Employ appropriate numerical methods to solve algebraic and transcendental equations.
- Apply Green's Theorem, Divergence Theorem and Stokes' theorem in various applications in the field of electro-magnetic and gravitational fields and fluid flow problems.
- Determine the extremals of functionals and solve the simple problems of the calculus of variations.

### **Text Books:**

| Lecture Hours     |                          |                  |    |

#### Credits – 00

**Course Objectives:** This course will enable students to:

- Acquire basic concepts of complex trigonometry, vector algebra, differential & integral calculus and vector differentiation.
- Solve first order differential equations.

### Module-1

**Complex Trigonometry**: Complex Numbers: Definitions & properties. Modulus and amplitude of a complex number, Argand's diagram, De-Moivre's theorem (without proof).

**Vector Algebra**: Scalar and vectors. Vectors addition and subtraction. Multiplication of vectors (Dot and Cross products). Scalar and vector triple products-simple problems. **L1** 

### **Module-2**

**Differential Calculus**: Review of successive differentiation. Formulae for n<sup>th</sup> derivatives of standard functions- Liebnitz's theorem (without proof). Polar curvesangle between the radius vector and the tangent pedal equation- Problems. Maclaurin's series expansions- Illustrative examples. Partial Differentiation : Euler's theorem for homogeneous functions of two variables. Total derivatives-differentiation of composite and implicit function. Application to Jacobians. L1, L2

#### Module-3

**Integral Calculus**: Statement of reduction formulae for  $sin^n x$ ,  $cos^n x$ , and  $sin^m x cos^n x$ and evaluation of these with standard limits-Examples. Double and triple integrals-Simple examples. **L1, L2** 

### Module-4

**Vector Differentiation**: Differentiation of vector functions. Velocity and acceleration of a particle moving on a space curve. Scalar and vector point functions. Gradient, Divergence, Curl and Laplacian (Definitions only). Solenoidal and irrotational vector fields-Problems. L1, L2

#### **Module-5**

Ordinary differential equations (ODE's): Introduction-solutions of first order and first degree differential equations: homogeneous, exact, linear differential equations of order one and equations reducible to above types. L1, L2

**Course outcomes:** On completion of the course, students are able to:

• Understand the fundamental concepts of complex numbers and vector algebra to analyze the problems arising in related area.

- Use derivatives and partial derivatives to calculate rates of change of multivariate functions.
- Learn techniques of integration including double and triple integrals to find area, volume, mass and moment of inertia of plane and solid region.
- Analyze position, velocity and acceleration in two or three dimensions using the calculus of vector valued functions.
- Recognize and solve first-order ordinary differential equations occurring in different branches of engineering.

**Oscilloscopes:** Introduction, Basic principles, CRT features, Block diagram of Oscilloscope, Simple CRO, Vertical Amplifier, Horizontal Deflecting System, Sweep or Time Base Generator, Measurement of Frequency by Lissajous Method, Digital Storage Oscilloscope. **(Text 1)** 

**Signal Generators:** Introduction, Fixed and Variable AF Oscillator, Standard Signal Generator, Laboratory Type Signal Generator, AF sine and Square Wave Generator, Function Generator, **(Text 1) L1, L2** 

### Module -4

Measuring Instruments: Field Strength Meter, Stroboscope, Phase Meter, Q Meter, Megger. (Text 1)

**Bridges:** Introduction, Wheatstone's bridge, Kelvin's Bridge; AC bridges, Capacitance Comparison Bridge, Inductance Comparison Bridge, Maxwell's bridge, Wien's bridge. **(Text 1) L1, L2, L3** 

#### Module -5

**Transducers:** Introduction, Electrical transducers, Selecting a transducer, Resistive transducer, Resistive position transducer, Strain gauges, Resistance thermometer, Thermistor, Inductive transducer, – LVDT, Piezoelectric transducer, Photo cell, Photo voltaic cell, Semiconductor photo diode and transistor. **(Text 1)** L1, L2, L3

**Course Outcomes:** After studying this course, students will be able to:

- Describe instrument measurement errors and calculate them.
- Describe the operation of Ammeters, Voltmeters, Multimeters and develop circuits for multirange Ammeters and Voltmeters.
- Describe functional concepts and operation of Digital voltmeters and instruments to measure voltage, frequency, time period, phase difference of signals, rotation speed, capacitance and pH of solutions.
- Describe functional concepts and operation of various Analog measuring instruments to measure field Strength, impedance, stroboscopic speed, in/out of phase, Q of coils, insulation resistance.
- Describe and discuss functioning and types of Oscilloscopes, Signal generators and Transducers.
- Utilize AC and DC bridges for passive component and frequency measurements.

**Feedback and Oscillator Circuits:** Feedback concepts, Feedback connection types, Practical feedback circuits, Oscillator operation, FET Phase shift oscillator, Wien bridge oscillator, Tuned Oscillator circuit, Crystal oscillator, UJT construction, UJT Oscillator. **L1,L2, L3** 

### Module -5

**Power Amplifiers:** Definition and amplifier types, Series fed class A amplifier, Transformer coupled class A amplifier, Class B amplifier operation and circuits, Amplifier distortion, Class C and Class D amplifiers.

Voltage Regulators: Discrete transistor voltage regulation - Series and Shunt Voltageregulators.L1, L2, L3

**Course Outcomes:** After studying this course, students will be able to:

- Describe the working principle and characteristics of BJT, FET, Single stage, cascaded and feedback amplifiers.
- Describe the Phase shift, Wien bridge, tuned and crystal oscillators using BJT/FET/UJT.
- Calculate the AC gain and impedance for BJT using re and h parameters models for CE and CC configuration.
- Determine the performance characteristics and parameters of BJT and FET amplifier using small signal model.
- Determine the parameters which affect the low frequency and high frequency responses of BJT and FET amplifiers and draw the characteristics.
- Evaluate the efficiency of Class A and Class B power amplifiers and voltage regulators.

Sequential Circuit Design: Mealy and Moore models, State machine notation, Synchronous Sequential circuit analysis, Construction of state diagrams, counter design. (Text 1, Chapter 6) L1, L2, L3

**Course Outcomes:** After studying this course, students will be able to:

- Develop simplified switching equation using Karnaugh Maps and Quine-McClusky techniques.
- Explain the operation of decoders, encoders, multiplexers, demultiplexers, adders, subtractors and comparators.
- Explain the working of Latches and Flip Flops (SR,D,T and JK).
- Design Synchronous/Asynchronous Counters and Shift registers using Flip Flops.
- Develop Mealy/Moore Models and state diagrams for the given clocked sequential circuits.
- Apply the knowledge gained in the design of Counters and Registers.

**Course objectives:** This course enables students to:

- Describe basic network concepts emphasizing source transformation, source shifting, mesh and nodal techniques to solve for resistance/impedance, voltage, current and power.
- Explain network Thevenin's, Millman's, Superposition, Reciprocity, Maximum Power transfer and Norton's Theorems and apply them in solving the problems related to Electrical Circuits.
- Explain the behavior of networks subjected to transient conditions.
- Use applications of Laplace transforms to network problems.
- Describe Series and Parallel Combination of Passive Components as resonating circuits, related parameters and to analyze frequency response.
- Study two port network parameters like Z, Y, T and h and their inter-relationships and applications.

## Module -1

**Basic Concepts:** Practical sources, Source transformations, Network reduction using Star – Delta transformation, Loop and node analysis with linearly dependent and independent sources for DC and AC networks, Concepts of super node and super mesh. **L1**, **L2**, **L3**, **L4** 

## Module -2

## **Network Theorems:**

Superposition, Reciprocity, Millman's theorems, Thevinin's and Norton's theorems, Maximum Power transfer theorem. **L1, L2, L3,L4** 

## Module -3

**Transient behavior and initial conditions:** Behavior of circuit elements under switching condition and their Representation, evaluation of initial and final conditions in RL, RC and RLC circuits for AC and DC excitations.

**Laplace Transformation & Applications**: Solution of networks, step, ramp and impulse responses, waveform Synthesis. **L1**, **L2**, **L3**, **L4** 

### Module -4

**Resonant Circuits:** Series and parallel resonance, frequency- response of series and Parallel circuits, Q–Factor, Bandwidth. **L1, L2, L3,L4** 

### Module -5

**Two port network parameters:** Definition of Z, Y, h and Transmission parameters, modeling with these parameters, relationship between parameters sets. **L1, L2, L3,L4** 

**Course Outcomes:** After studying this course, students will be able to:

- Determine currents and voltages using source transformation/ source shifting/ mesh/ nodal analysis and reduce given network using star-delta transformation/ source transformation/ source shifting.
- Solve network problems by applying Superposition/ Reciprocity/ Thevenin's/ Norton's/ Maximum Power Transfer/ Millman's Network Theorems and electrical laws to reduce circuit complexities and to arrive at feasible solutions.
- Calculate current and voltages for the given circuit under transient conditions.
- Apply Laplace transform to solve the given network.
- Evaluate for RLC elements/ frequency response related parameters like resonant frequency, quality factor, half power frequencies, voltage across inductor and capacitor, current through the RLC elements, in resonant circuits
- Solve the given network using specified two port network parameter like Z or Y or T or h.

| Course objectives: This course wi | ll enable students to:      |                 |       |  |
| • Study the different coordinat   | e systems Physical signifia | nce of Divergen | ce Cu |  |

- Study the different coordinate systems, Physical signifiance of Divergence, Curl and Gradient.
- Understand the applications of Coulomb's law and Gauss law to different charge distributions and the applications of Laplace's and Poisson's Equations to solve real time problems on capacitance of different charge distributions.
- Understand the physical significance of Biot-Savart's, Amperes's Law and Stokes' theorem for different current distributions.
- Infer the effects of magnetic forces, materials and inductance.
- Know the physical interpretation of Maxwell' equations and applications for Plane waves for their behaviour in different media
- Acquire knowledge of Poynting theorem and its application of power flow.

## Module - 1

## Coulomb's Law, Electric Field Intensity and Flux density

Experimental law of Coulomb, Electric field intensity, Field due to continuous volume charge distribution, Field of a line charge, Electric flux density. **L1, L2, L3** 

## Module -2

## Gauss's law and Divergence

Gauss' law, Divergence. Maxwell's First equation (Electrostatics), Vector Operator ▼ and divergence theorem.

## Energy, Potential and Conductors

Energy expended in moving a point charge in an electric field, The line integral, Definition of potential difference and potential, The potential field of point charge, Current and Current density, Continuity of current. **L1, L2, L3** 

## Module -3

## **Poisson's and Laplace's Equations**

Derivation of Poisson's and Laplace's Equations, Uniqueness theorem, Examples of the solution of Laplace's equation.

## **Steady Magnetic Field**

Biot-Savart Law, Ampere's circuital law, Curl, Stokes' theorem, Magnetic flux and magnetic flux density, Scalar and Vector Magnetic Potentials. **L1, L2, L3** 

## **Magnetic Forces**

Force on a moving charge, differential current elements, Force between differential current elements.

### **Magnetic Materials**

Magnetisation and permeability, Magnetic boundary conditions, Magnetic circuit, Potential Energy and forces on magnetic materials. **L1, L2, L3** 

### Module -5

## Time-varying fields and Maxwell's equations

Faraday's law, displacement current, Maxwell's equations in point form, Maxwell's equations in integral form.

### **Uniform Plane Wave**

Wave propagation in free space and good conductors. Poynting's theorem and wave power, Skin Effect. **L1, L2, L3** 

**Course Outcomes:** After studying this course, students will be able to:

- Evaluate problems on electric field due to point, linear, volume charges by applying conventional methods or by Gauss law.
- Determine potential and energy with respect to point charge and capacitance using Laplace equation.
- Calculate magnetic field, force, and potential energy with respect to magnetic materials.
- Apply Maxwell's equation for time varying fields, EM waves in free space and conductors.
- Evaluate power associated with EM waves using Poynting theorem.

|   |  | factor.                    | OSFET     |  |  |  |  |

- 8. Plot the transfer and drain characteristics of n-channel MOSFET and calculate its parameters, namely; drain resistance, mutual conductance and amplification factor.
- 9. Set-up and study the working of complementary symmetry class B push pull power amplifier and calculate the efficiency.
- 10. Design and set-up the RC-Phase shift Oscillator using FET, and calculate the frequency of output waveform.
- 11. Design and set-up the following tuned oscillator circuits using BJT, and determine the frequency of oscillation.

(a) Hartley Oscillator (b) Colpitts Oscillator

12. Design and set-up the crystal oscillator and determine the frequency of oscillation.

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Test circuits of rectifiers, clipping circuits, clamping circuits and voltage regulators.
- Determine the characteristics of BJT and FET amplifiers and plot its frequency response.
- Compute the performance parameters of amplifiers and voltage regulators
- Design and test the basic BJT/FET amplifiers, BJT Power amplifier and oscillators.

# **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

- 11. Simulate Full- Adder using simulation tool.
- 12. Simulate Mod-8 Synchronous UP/DOWN Counter using simulation tool.

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Demonstrate the truth table of various expressions and combinational circuits using logic gates.
- Design and test various combinational circuits such as adders, subtractors, comparators, multiplexers.
- Realize Boolean expression using decoders.
- Construct and test flips-flops, counters and shift registers.
- Simulate full adder and up/down counters.

## **Conduct of Practical Examination:**

## Module-5

**Sampling Theory:** Sampling, Sampling distributions, standard error, test of hypothesis for means and proportions, confidence limits for means, student's t-distribution, Chi-square distribution as a test of goodness of fit. **L3** 

**Stochastic process:** Stochastic processes, probability vector, stochastic matrices, fixed points, regular stochastic matrices, Markov chains, higher transition probability-simple problems. **L1** 

**Course Outcomes:** On completion of this course, students are able to:

- Solve first and second order ordinary differential equations arising in flow problems using single step and multistep numerical methods.
- Understand the analyticity, potential fields, residues and poles of complex potentials in field theory and electromagnetic theory.
- Describe conformal and bilinear transformation arising in aerofoil theory, fluid flow visualization and image processing.
- Solve problems of quantum mechanics, hydrodynamics and heat conduction by employing Bessel's function relating to cylindrical polar coordinate systems and Legendre's polynomials relating to spherical polar coordinate systems.
- Solve problems on probability distributions relating to digital signal processing, information theory and optimization concepts of stability of design and structural engineering.
- Draw the validity of the hypothesis proposed for the given sampling distribution in accepting or rejecting the hypothesis.
- Determine joint probability distributions and stochastic matrix connected with the multivariable correlation problems for feasible random events.
- Define transition probability matrix of a Markov chain and solve problems related to discrete parameter random process.

## Credits – 00

**Course Objectives:** This course will enable students to:

- Understand essential concepts of linear algebra.
- Solve second and higher order differential equations.
- Understand Laplace and inverse Laplace transforms and elementary probability theory.

### Module-1

**Linear Algebra:** Introduction - rank of matrix by elementary row operations - Echelon form. Consistency of system of linear equations - Gauss elimination method. Eigen values and Eigen vectors of a square matrix. Application of Cayley-Hamilton theorem (without proof) to compute the inverse of a matrix-Examples. **L1,L3** 

### Module-2

**Higher order ODE's:** Linear differential equations of second and higher order equations with constant coefficients. Homogeneous /non-homogeneous equations. Inverse differential operators. Solutions of initial value problems. Method of undetermined coefficients and variation of parameters. **L1,L3** 

#### **Module-3**

**Laplace transforms**: Laplace transforms of elementary functions. Transforms of derivatives and integrals, transforms of periodic function and unit step function-Problems only. **L1,L2** 

### **Module-4**

**Inverse Laplace transforms**: Definition of inverse Laplace transforms. Evaluation of Inverse transforms by standard methods. Application to solutions of Linear differential equations and simultaneous differential equations. **L1,L2** 

#### Module-5

**Probability:** Introduction. Sample space and events. Axioms of probability. Addition and multiplication theorems. Conditional probability – illustrative examples. Bayes's theorem-examples. **L1,L2** 

**Course Outcomes:** On completion of this course, students are able to:

- Solve systems of linear equations in the different areas of linear algebra.
- Solve second and higher order differential equations occurring in of electrical circuits, damped/un-damped vibrations.
- Describe Laplace transforms of standard and periodic functions.
- Determine the general/complete solutions to linear ODE using inverse Laplace transforms.
- Recall basic concepts of elementary probability theory and, solve problems related

to the decision theory, synthesis and optimization of digital circuits.

# Module -4

## Fourier Representation of aperiodic Signals:

**FT** representation of aperiodic CT signals - FT, definition, FT of standard CT signals, Properties and their significance (4 Hours).

**FT representation of aperiodic discrete signals-DTFT**, definition, DTFT of standard discrete signals, Properties and their significance (4 Hours).

**Impulse sampling and reconstruction:** Sampling theorem (only statement) and reconstruction of signals (2 Hours). **L1, L2, L3** 

Module -5

**Z-Transforms:** Introduction, the Z-transform, properties of the Region of convergence, Properties of the Z-Transform, Inversion of the Z-Transform, Transform analysis of LTI systems. **L1, L2, L3** 

**Course Outcomes:** At the end of the course, students will be able to:

- Classify the signals as continuous/discrete, periodic/aperiodic, even/odd, energy/power and deterministic/random signals.
- Determine the linearity, causality, time-invariance and stability properties of continuous and discrete time systems.
- Compute the response of a Continuous and Discrete LTI system using convolution integral and convolution sum.
- Determine the spectral characteristics of continuous and discrete time signal using Fourier analysis.
- Compute Z-transforms, inverse Z- transforms and transfer functions of complex LTI systems.

**Course objectives:** This course will enable students to:

- Understand the basic features, configurations and application of control systems.
- Understand various terminologies and definitions for the control systems.
- Learn how to find a mathematical model of electrical, mechanical and electromechanical systems.
- Know how to find time response from the transfer function.
- Find the transfer function via Masons' rule.
- Analyze the stability of a system from the transfer function.

## Module -1

Introduction to Control Systems: Types of Control Systems, Effect of Feedback Systems, Differential equation of Physical Systems – Mechanical Systems, Electrical Systems, Analogous Systems. Block diagrams and signal flow graphs: Transfer functions, Block diagram algebra and Signal Flow graphs. **L1**, **L2**, **L3** 

## Module -2

Time Response of feedback control systems: Standard test signals, Unit step response of First and Second order Systems. Time response specifications, Time response specifications of second order systems, steady state errors and error constants. Introduction to PI, PD and PID Controllers (excluding design). **L1, L2, L3** 

## Module -3

Stability analysis: Concepts of stability, Necessary conditions for Stability, Routh stability criterion, Relative stability analysis: more on the Routh stability criterion, Introduction to Root-Locus Techniques, The root locus concepts, Construction of root loci. **L1**, **L2**, **L3** 

## Module -4

## Frequency domain analysis and stability:

Correlation between time and frequency response, Bode Plots, Experimental determination of transfer function.

Introduction to Polar Plots, (Inverse Polar Plots excluded) Mathematical preliminaries, Nyquist Stability criterion, (Systems with transportation lag excluded) Introduction to lead, lag and lead-lag compensating networks (excluding design).

## L1, L2, L3

Module -5

Introduction to Digital Control System: Introduction, Spectrum Analysis of Sampling process, Signal reconstruction, Difference equations. Introduction to State variable analysis: Introduction, Concept of State, State variables & State model, State model for Linear Continuous & Discrete time systems, Diaganolisation.

## L1, L2, L3

**Course Outcomes:** At the end of the course, the students will be able to

- Develop the mathematical model of mechanical and electrical systems
- Develop transfer function for a given control system using block diagram reduction techniques and signal flow graph method
- Determine the time domain specifications for first and second order systems
- Determine the stability of a system in the time domain using Routh-Hurwitz criterion and Root-locus technique.
- Determine the stability of a system in the frequency domain using Nyquist and bode plots
- Develop a control system model in continuous and discrete time using state variable techniques

| <ul> <li>Course objectives: This course</li> <li>Design simple systems for</li> </ul> | rse will enable students to:<br>generating and demodulating AM                       | , DSB, SSB and V | SB |
| signals.  |  | , ,              |    |
| • Understand the concepts systems.  | in Angle modulation for the design   | of communication | n  |
| 5   | generating and demodulating free   | quency modulated |    |
| 6   | dom process and various types of :   | noise.           |    |

- Evaluate the performance of the communication system in presence of noise.
- Analyze pulse modulation and sampling techniques.

## Module – 1

**AMPLITUDE MODULATION:** Introduction, Amplitude Modulation: Time & Frequency – Domain description, Switching modulator, Envelop detector.

**DOUBLE SIDE BAND-SUPPRESSED CARRIER MODULATION:** Time and Frequency – Domain description, Ring modulator, Coherent detection, Costas Receiver, Quadrature Carrier Multiplexing.

**SINGLE SIDE-BAND AND VESTIGIAL SIDEBAND METHODS OF MODULATION:** SSB Modulation, VSB Modulation, Frequency Translation, Frequency- Division Multiplexing, Theme Example: VSB Transmission of Analog and Digital Television. (Chapter 3 of Text). **L1, L2, L3** 

## Module – 2

**ANGLE MODULATION**: Basic definitions, Frequency Modulation: Narrow Band FM, Wide Band FM, Transmission bandwidth of FM Signals, Generation of FM Signals, Demodulation of FM Signals, FM Stereo Multiplexing, Phase–Locked Loop: Nonlinear model of PLL, Linear model of PLL, Nonlinear Effects in FM Systems. The Superheterodyne Receiver (refer Chapter 4 of Text). **L1, L2, L3** 

## Module – 3

**RANDOM VARIABLES & PROCESS**: Introduction, Probability, Conditional Probability, Random variables, Several Random Variables. Statistical Averages: Function of a random variable, Moments, Random Processes, Mean, Correlation and Covariance function: Properties of autocorrelation function, Cross-correlation functions (refer Chapter 5 of Text).

**NOISE**: Shot Noise, Thermal noise, White Noise, Noise Equivalent Bandwidth (refer Chapter 5 of Text), Noise Figure (refer Section 6.7 of Text). **L1, L2, L3** 

#### Module – 4

**NOISE IN ANALOG MODULATION:** Introduction, Receiver Model, Noise in DSB-SC receivers, Noise in AM receivers, Threshold effect, Noise in FM receivers, Capture effect, FM threshold effect, FM threshold reduction, Pre-emphasis and De-emphasis in FM (refer Chapter 6 of Text). **L1, L2, L3** 

#### Module – 5

**DIGITAL REPRESENTATION OF ANALOG SIGNALS:** Introduction, Why Digitize Analog Sources?, The Sampling process, Pulse Amplitude Modulation, Time Division Multiplexing, Pulse-Position Modulation, Generation of PPM Waves, Detection of PPM Waves, The Quantization Process, Quantization Noise, Pulse-Code Modulation: Sampling, Quantization, Encoding, Regeneration, Decoding, Filtering, Multiplexing (refer Chapter 7 of Text), Application to Vocoder (refer Section 6.8 of Reference Book 1). **L1, L2, L3** 

**Course Outcomes:** At the end of the course, students will be able to:

- Determine the performance of analog modulation schemes in time and frequency domains.
- Determine the performance of systems for generation and detection of modulated analog signals.
- Characterize analog signals in time domain as random processes and in frequency domain using Fourier transforms.
- Characterize the influence of channel on analog modulated signals
- Determine the performance of analog communication systems.
- Understand the characteristics of pulse amplitude modulation, pulse position modulation and pulse code modulation systems.

### **CREDITS - 04**

**Course objectives:** This course will enable students to:

- Define and describe various parameters of Op-Amp, its characteristics and specifications.
- Discuss the effects of Input and Output voltage ranges upon Op-Amp circuits.
- Sketch and Analyze Op-Amp circuits to determine Input Impedances, output Impedances and other performance parameters.
- Sketch and Explain typical Frequency Response graphs for each of the Filter circuits showing Butterworth and Chebyshev responses where ever appropriate.
- Describe and Sketch the various switching circuits of Op-Amps and analyze its operations.
- Differentiate between various types of DACs and ADCs and evaluate the performance of each with neat circuit diagrams and assuming suitable inputs.

# Module – 1

# **Operational Amplifier Fundamentals:**

Basic Op-amp circuit, Op-Amp parameters – Input and output voltage, CMRR and PSRR, offset voltages and currents, Input and output impedances, Slew rate and Frequency limitations. **OP-Amps as DC Amplifiers** – Biasing OP-amps, Direct coupled voltage followers, Non-inverting amplifiers, inverting amplifiers, Summing amplifiers, and Difference amplifiers. Interpretation of OP-amp LM741 & TL081 datasheet. **(Text1) L1, L2,L3** 

# Module – 2

**Op-Amps as AC Amplifiers:** Capacitor coupled voltage follower, High input impedance – Capacitor coupled voltage follower, Capacitor coupled non inverting amplifiers, High input impedance – Capacitor coupled Non inverting amplifiers, Capacitor coupled inverting amplifiers, setting the upper cut-off frequency, Capacitor coupled difference amplifier.

**OP-Amp Applications:** Voltage sources, current sources and current sinks, current amplifiers, instrumentation amplifier, precision rectifiers.**(Text1) L1, L2,L3** 

# Module – 3

**More Applications :** Limiting circuits, Clamping circuits, Peak detectors, Sample and hold circuits, V to I and I to V converters, Differentiating Circuit, Integrator Circuit, Phase shift oscillator, Wien bridge oscillator, Crossing detectors, inverting Schmitt trigger. **(Text 1)** 

Log and antilog amplifiers, Multiplier and divider. (Text2) L1, L2,L3

### Module – 4

Active Filters: First order and second order active Low-pass and high pass filters, Bandpass Filter, Bandstop Filter. (Text 1)

**Voltage Regulators:** Introduction, Series Op-amp regulator, IC voltage regulators. 723 general purpose regulators. **(Text 2) L1, L2,L3** 

#### Module – 5

**Phase locked loop:** Basic Principles, Phase detector/comparator, VCO. **DAC and ADC convertor**: DAC using R-2R, ADC using Successive approximation.

**Other IC Application:** 555 timer, Basic timer circuit, 555 timer used as astable and monostable multivibrator. **(Text 2) L1, L2,L3** 

**Course Outcomes:** After studying this course, students will be able to:

- Explain Op-Amp circuit and parameters including CMRR, PSRR, Input & Output Impedances and Slew Rate.
- Design Op-Amp based Inverting, Non-inverting, Summing & Difference Amplifier, and AC Amplifiers including Voltage Follower.
- Test circuits of Op-Amp based Voltage/ Current Sources & Sinks, Current, Instrumentation and Precision Amplifiers.
- Test circuits of Op-Amp based linear and non-linear circuits comprising of limiting, clamping, Sample & Hold, Differentiator/ Integrator Circuits, Peak Detectors, Oscillators and Multiplier & Divider.
- Design first & second order Low Pass, High Pass, Band Pass, Band Stop Filters and Voltage Regulators using Op-Amps.

### • Explain applications of linear ICs in phase detector, VCO, DAC, ADC and Timer.

#### Module 5

#### **Basic Peripherals and their Interfacing with 8086 (Part 2):** Interfacing ADC-0808/0809, DAC-0800, Stepper Motor using 8255 (5.6.1, 5.7.2, 5.8). Timer 8254 – Mode 0 & 3 and Interfacing programmes for

(5.6.1, 5.7.2, 5.8). Timer 8254 – Mode 0 & 3 and Interfacing programmes for these modes (refer 6.1 of Text).

**INT 21H DOS Function calls** - for handling Keyboard and Display (refer Appendix-B of Text).

Von-Neumann & Harvard CPU architecture and CISC & RISC CPU architecture (refer Reference Book 1). **L1, L2, L3** 

**Course Outcomes:** At the end of the course students will be able to:

- Explain the History of evaluation of Microprocessors, Architecture and instruction set of 8086, CISC & RISC, Von-Neumann & Harvard CPU Architecture, Configuration & Timing diagrams of 8086 and Instruction set of 8086.
- Write 8086 Assembly level programs using the 8086 instruction set
- Write modular programs using procedures.
- Write 8086 Stack and Interrupts programming.
- Interface 8086 to Static memory chips and 8255, 8254, 0808 ADC, 0800 DAC, Keyboard, Display and Stepper motors.
- Use INT 21 DOS interrupt function calls to handle Keyboard and Display.

# 5. Programs involving

String manipulation like string transfer, string reversing, searching for a string.

# 6. Programs involving

Programs to use DOS interrupt INT 21h Function calls for Reading a Character from keyboard, Buffered Keyboard input, Display of character/ String on console.

# 7. Interfacing Experiments:

Experiments on interfacing 8086 with the following interfacing modules through DIO (Digital Input/Output - PCI bus compatible card / 8086 Trainer )

- 1. Matrix keyboard interfacing
- 2. Seven segment display interface
- 3. Logical controller interface
- 4. Stepper motor interface
- 5. ADC and DAC Interface (8 bit)
- **6.** Light dependent resistor (LDR), Relay and Buzzer Interface to make light operated switches

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Write and execute 8086 assembly level programs to perform data transfer, arithmetic and logical operations.
- Understand assembler directives, branch, loop operations and DOS 21H Interrupts.
- Write and execute 8086 assembly level programs to sort and search elements in a given array.
- Perform string transfer, string reversing, searching a character in a string with string manipulation instructions of 8086.
- Utilize procedures and macros in programming 8086.
- Demonstrate the interfacing of 8086 with 7 segment display, matrix keyboard, logical controller, stepper motor, ADC, DAC, and LDR for simple applications.

# **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- For examination, one question from software and one question from hardware interfacing to be set.
- Students are allowed to pick one experiment from the lot.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

| 10. Design BJT/FET                                | Mixer.  |                       |             |  |  |
| 1. DSBSC generation                               | n using Balance Modulator IC 14   | 496/1596.             |             |  |  |
| 2. Frequency synthe                               |   |                       |             |  |  |

**Course Outcomes:** This laboratory course enables students to:

- Illustrate the pulse and flat top sampling techniques using basic circuits.
- Demonstrate addition and integration using linear ICs, and 555 timer operations to generate signals/pulses.
- Demonstrate AM and FM operations and frequency synthesis.
- Design and illustrate the operation of instrumentation amplifier, LPF, HPF, DAC and oscillators using linear IC.

# **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Students are allowed to pick one experiment from the lot.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

**Entrepreneurship**: Definition of Entrepreneur, Importance of Entrepreneurship, concepts of Entrepreneurship, Characteristics of successful Entrepreneur, Classification of Entrepreneurs, Myths of Entrepreneurship, Entrepreneurial Development models, Entrepreneurial development cycle, Problems faced by Entrepreneurs and capacity

building for Entrepreneurship (Selected topics from Chapter 2, Text 2). L1, L2

Module-4

**Modern Small Business Enterprises:** Role of Small Scale Industries, Impact of Globalization and WTO on SSIs, Concepts and definitions of SSI Enterprises, Government policy and development of the Small Scale sector in India, Growth and Performance of Small Scale Industries in India, Sickness in SSI sector, Problems for Small Scale Industries, Ancillary Industry and Tiny Industry (Definition only) (Selected topics from Chapter1, Text 2).

**Institutional Support for Business Enterprises:** Introduction, Policies & Schemes of Central Level Institutions, State Level Institutions (Selected topics from Chapter 4, Text 2). **L1, L2** 

#### **Module-5**

**Projects Management:** AProject. Search for a Business idea: Introduction, Choosing an Idea, Selection of product, The Adoption process, Product Innovation, Product Planning and Development Strategy, Product Planning and Development Process. Concepts of Projects and Classification: Introduction, Meaning of Projects, Characteristics of a Project, Project Levels, Project Classification, Aspects of a Project, The project Cycle, Features and Phases of Project management, Project Management Processes. Project Identification: Feasibility Report, Project Feasibility Analysis. Project Formulation: Meaning, Steps in Project formulation, Sequential Stages of Project Formulation, Project Evaluation.

**Project Design and Network Analysis:** Introduction, Importance of Network Analysis, Origin of PERT and CPM, Network, Network Techniques, Need for Network Techniques, Steps in PERT, CPM, Advantages, Limitations and Differences.

(Selected topics from Chapters 16 to 20 of Unit 3, Text 3). L1, L2, L3

**Course Outcomes:** After studying this course, students will be able to:

- Understand the fundamental concepts of Management and Entrepreneurship
- Select a best Entrepreneurship model for the required domain of establishment
- Describe the functions of Managers, Entrepreneurs and their social responsibilities
- Compare various types of Entrepreneurs
- Analyze the Institutional support by various state and central government agencies

Design tool flow, Font conventions.

**Entities and Architectures:** Introduction, A simple design, Design entities, Identifiers, Data objects, Data types, and Attributes. (Text 2) **L1, L2, L3** 

**Course Outcomes:** At the end of this course, students should be able to

- Write Verilog programs in gate, dataflow (RTL), behavioral and switch modeling levels of Abstraction.
- Write simple programs in VHDL in different styles.
- Design and verify the functionality of digital circuit/system using test benches.
- Identify the suitable Abstraction level for a particular digital design.
- Write the programs more effectively using Verilog tasks and directives.
- Perform timing and delay Simulation.

**Some Important Cyclic Codes:** Golay Codes, BCH Codes(Section 8.4 – Article 5 of Text 2).

**Convolution Codes**: Convolution Encoder, Time domain approach, Transform domain approach, Code Tree, Trellis and State Diagram, The Viterbi Algorithm) (Section 8.5 – Articles 1,2 and 3, 8.6- Article 1 of Text 2). **L1, L2, L3** 

**Course Outcomes:** At the end of the course the students will be able to:

- Explain concept of Dependent & Independent Source, measure of information, Entropy, Rate of Information and Order of a source
- Represent the information using Shannon Encoding, Shannon Fano, Prefix and Huffman Encoding Algorithms
- Model the continuous and discrete communication channels using input, output and joint probabilities
- Determine a codeword comprising of the check bits computed using Linear Block codes, cyclic codes & convolutional codes
- Design the encoding and decoding circuits for Linear Block codes, cyclic codes, convolutional codes, BCH and Golay codes.

|                   | CREDITS - 03          |            |    |

**Course Objectives:** This course will enable students to:

- Enhance basic engineering science and technical knowledge of nanoelectronics.
- Explain basics of top-down and bottom-up fabrication process, devices and systems.
- Describe technologies involved in modern day electronic devices.
- Know various nanostructures of carbon and the nature of the carbon bond itself.
- Learn the photo physical properties of sensor used in generating a signal.

#### Module-1

**Introduction:** Overview of nanoscience and engineering. Development milestones in microfabrication and electronic industry. Moore's law and continued miniaturization, Classification of Nanostructures, Electronic properties of atoms and solids: Isolated atom, Bonding between atoms, Giant molecular solids, Free electron models and energy bands, crystalline solids, Periodicity of crystal lattices, Electronic conduction, effects of nanometerlength scale, Fabrication methods: Top down processes, Bottom up processes methods for templating the growth of nanomaterials, ordering of nanosystems (Text 1). **L1, L2** 

#### **Module-2**

**Characterization:** Classification, Microscopic techniques, Field ion microscopy, scanning probe techniques, diffraction techniques: bulk and surface diffraction techniques (Text 1).

**Inorganic semiconductor nanostructures:** overview of semiconductor physics. Quantum confinement in semiconductor nanostructures: quantum wells, quantum wires, quantum dots, super-lattices, band offsets, electronic density of states (Text 1). **L1, L2** 

#### Module-3

**Fabrication techniques:** requirements of ideal semiconductor, epitaxial growth of quantum wells, lithography and etching, cleaved-edge over growth, growth of vicinal substrates, strain induced dots and wires, electrostatically induced dots and wires, Quantum well width fluctuations, thermally annealed quantum wells, semiconductor nanocrystals, collidal quantum dots, self-assembly techniques.(Text 1).

**Physical processes:** modulation doping, quantum hall effect, resonant tunneling, charging effects, ballistic carrier transport, Inter band absorption, intraband absorption, Light emission processes, phonon bottleneck, quantum confined stark effect, nonlinear effects, coherence and dephasing, characterization of semiconductor nanostructures: optical electrical and structural (Text 1). **L1, L2** 

#### Module-4

**Carbon Nanostructures:** Carbon molecules, Carbon Clusters, Carbon Nanotubes, application of Carbon Nanotubes. (Text 2) **L1, L2** 

#### Module-5

**Nanosensors:** Introduction, What is Sensor and Nanosensors?, What makes them Possible?, Order From Chaos, Characterization, Perception, Nanosensors Based On Quantum Size Effects, Electrochemical Sensors, Sensors Based On Physical Properties, Nanobiosensors, Smart dust Sensor for the future. (Text 3)

**Applications:** Injection lasers, quantum cascade lasers, single-photon sources, biological tagging, optical memories, coulomb blockade devices, photonic structures, QWIP's, NEMS, MEMS (Text 1). **L1, L2** 

**Course Outcomes:** After studying this course, students will be able to:

- Know the principles behind Nanoscience engineering and Nanoelectronics.
- Know the effect of particles size on mechanical, thermal, optical and electrical properties of nanomaterials.
- Know the properties of carbon and carbon nanotubes and its applications.
- Know the properties used for sensing and the use of smart dust sensors.
- Apply the knowledge to prepare and characterize nanomaterials.
- Analyse the process flow required to fabricate state-of-the-art transistor technology.

**Course outcomes:** At the end of the course, students should be able to:

- Explain the concept of threshold logic
- Understand the effect of hazards on digital circuits and fault detection and analysis
- Define the concepts of finite state model
- Analyze the structure of sequential machine
- Explain methods of state identification and fault detection experiments

**Course outcomes:** After studying this course, students will be able to:

- Explain the goals, structure, operation and types of operating systems.
- Apply scheduling techniques to find performance factors.
- Explain organization of file systems and IOCS.
- Apply suitable techniques for contiguous and non-contiguous memory allocation.
- Describe message passing, deadlock detection and prevention methods.

**Behavior of Dielectric Materials in AC and DC Fields:** Introduction, Classification of Dielectric Materials at Microscopic level, Polar Dielectric Materials, Non-polar Dielectric Materials, Kinds of Polarizations, behavior of dielectric materials, Three electric Vectors, Gauss's Law in a Dielectric, Electric Susceptibility and Static Dielectric constant, Effect of Dielectric medium upon capacitance, macroscopic electric field, Microscopic Electric field, temperature dependence of dielectric constant, polar dielectric in ac and dc fields, behavior of polar dielectric at high frequencies, Dielectric loss, Dielectric strength and Dielectric Breakdown, Various kinds of Dielectric Materials, Hysteresis in Ferroelectric Materials, Applications of Ferroelectric Materials in Devices. **L1, L2** 

#### Module-4

**Conductivity of Metals and Superconductivity:** Introduction, Ohm's law, Explanation for the dependence of electrical resistivity upon temperature, Free-electron theory of metals, Application of Lorentz-Drude free-electron theory, Effect of various parameters on Electrical Conductivity, Resistivity Ratio, Variation of resistivity of alloys with temperature, Thermal Conductivity of Materials, Heat produced in Current Carrying Conductor, Thermoelectric Effect, Thermoelectric Series, Seebeck's Experiment.

Discovery of superconductivity, superconductivity and transition temperature, materials, explanation superconductivity superconducting of phenomenon, characteristics superconductors, change in thermodynamic parameters of in superconducting state, frequency dependence of superconductivity, current status of high temperature superconductors, practical applications of superconductors. L1, L2

#### Module-5

**Electrical Conducting and Insulating materials:** Introduction, Classification of conducting materials, difference in properties of Hard-Drawn and Annealed copper, standard conductors, comparison between some popular Low-Resistivity Materials, Low-Resistivity Copper Alloys, Electrical contact materials and their selection, classification of contact materials, Materials for Lamp Filaments, Preparation of Tungsten Filaments.

Insulating gases, Liquids and solids and their characteristics, Selection of the insulating material, other important properties of Insulating materials, Thermal characteristics, chemical properties of Insulating materials, classification of Insulating materials on the basis of structure. **L1**, **L2** 

**Course Outcomes:** At the end of the course, students will be able to

- Understand the various kinds of materials and their applications in ac and dc fields.
- Understand the conductivity of superconductivity of materials.
- Explain the electrical properties of different materials and metallic behavior of materials on the basis of band theory.
- Explain the properties and applications of all kind of magnetic materials.
- Explain the properties of electrical conducting and insulating materials.
- Assess a variety of approaches in developing new materials with enhanced performance to replace existing materials.

**CREDITS – 03** 

**Course objectives:** This course will enable students to:

- Understand the architectural features and instruction set of 16 bit microcontroller MSP430.
- Program MSP430 using the various instructions for different applications.
- Understand the functions of the various peripherals which are interfaced with MSP430.
- Describe the power saving modes in MSP430.
- Explain the low power applications using MSP430.

### Module-1

**MSP430 Architecture:** Introduction –Where does the MSP430 fit, The outside view, The inside view-Functional block diagram, Memory, Central Processing Unit, Memory Mapped Input and Output, Clock Generator, Exceptions: Interrupts and Resets, MSP430 family.

(Text: Ch1- 1.3 to 1.7, Ch2- 2.1 to 2.7, Ch5- 5.1, 5.7 up to 5.7.1) L1, L2

### Module-2

Addressing Modes & Instruction Set-Addressing Modes, Instruction set, Constant Generator and Emulated Instructions, Program Examples.

(Text: Ch5- 5.2 to 5.5) **L1, L2, L3** 

### Module-3

**Clock System, Interrupts and Operating Modes-**Clock System, Interrupts, What happens when an interrupted is requested, Interrupt Service Routines, Low Power Modes of Operation, Watchdog Timer, Basic Timer1, Real Time Clock, Timer-A: Timer Block, Capture/Compare Channels, Interrupts from Timer-A. (Text: Ch5 - 5.8 upto 5.8.4, Ch 6-6.6 to 6.8, 6.10, Ch8 -8.1, 8.2, 8.3) **L1, L2** 

#### Module-4

**Analog Input-Output and PWM -** Comparator-A, ADC10, ADC12, Sigma-Delta ADC, Internal Operational Amplifiers, DAC, Edge Aligned PWM, Simple PWM, Design of PWM. LCD interfacing.

(Text: Ch9 – 9.1 up to 9.1.2, 9.4, 9.5 up to 9.5.1, 9.7, 9.8 up to 9.8.1, 9.11.5, 9.12 (without 9.12.1), 8.6.2 to 8.6.4) **L1, L2** 

Module-5

#### Digital Input-Output and Serial Communication:

Parallel Ports, Lighting LEDs, Flashing LEDs, Read Input from a Switch, Toggle the LED state by pressing the push button, LCD interfacing.

Asynchronous Serial Communication, Asynchronous Communication with USCI\_A, Communications, Peripherals in MSP430, Serial Peripheral Interface.

(Text: Selected topics from Ch4 & Ch7 and Ch7- 7.1, Ch10 – 10.1, 10.2, and 10.12) **L1, L2, L3** 

**Course outcomes:** After studying this course, students will be able to:

- Understand the architectural features and instruction set of 16 bit microcontroller MSP430.
- Develop programs using the various instructions of MSP430 for different applications.
- Understand the functions of the various peripherals which are interfaced with MSP430 microcontroller.
- Describe the power saving modes in MSP430.
- Explain the low power applications using MSP430 microcontroller.

#### **Evaluation of CIE Marks:**

It is suggested that at least a few simple programs to be executed by students using any evaluation board of MSP430 for better understanding of the course. This activity can be considered for the evaluation of 10 marks out of 40 CIE (Continuous Internal Evaluation) marks, reserved for the other activities.

#### **Question paper pattern:**

- The question paper will have ten questions
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of three sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module
- The students will have to answer 5 full questions, selecting one full question from each module

# B.E., V Semester, ELECTRONICS & COMMUNICATION ENGINEERING / TELECOMMUNICATION ENGINEERING

[As per Choice Based Credit System (CBCS) Scheme]

| Course Code                     | 17ECL57  | CIE Marks  | 40 |  |
|---------------------------------|--|------------|----|--|
| Number of Lecture<br>Hours/Week | 01Hr Tutorial (Instructions)<br>+ 02 Hours Laboratory=03 | SEE Marks  | 60 |  |
| RBT Levels                      | L1, L2, L3   | Exam Hours | 03 |  |
| CREDITS – 02                    |  |            |    |  |

**Course Objectives:** This course will enable students to

- Simulate discrete time signals and verification of sampling theorem.
- Compute the DFT for a discrete signal and verification of its properties using MATLAB.
- Find solution to the difference equations and computation of convolution and correlation along with the verification of properties.
- Compute and display the filtering operations and compare with the theoretical values.
- Implement the DSP computations on DSP hardware and verify the result.

# Laboratory Experiments

# Following Experiments to be done using MATLAB / SCILAB / OCTAVE or equivalent:

- 1. Verification of sampling theorem.
- 2. Linear and circular convolution of two given sequences, Commutative, distributive and associative property of convolution.
- 3. Auto and cross correlation of two sequences and verification of their properties
- 4. Solving a given difference equation.
- 5. Computation of N point DFT of a given sequence and to plot magnitude and phase spectrum (using DFT equation and verify it by built-in routine).
- 6. (i) Verification of DFT properties (like Linearity and Parsevals theorem, etc.)(ii) DFT computation of square pulse and Sinc function etc.
- 7. Design and implementation of FIR filter to meet given specifications (using different window techniques).
- 8. Design and implementation of IIR filter to meet given specifications.

### Following Experiments to be done using DSP kit

- 9. Linear convolution of two sequences
- 10. Circular convolution of two sequences
- 11. N-point DFT of a given sequence
- 12. Impulse response of first order and second order system
- 13. Implementation of FIR filter

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Understand the concepts of analog to digital conversion of signals and frequency domain sampling of signals.
- Modelling of discrete time signals and systems and verification of its properties and results.
- Implementation of discrete computations using DSP processor and verify the results.
- Realize the digital filters using a simulation tool and a DSP processor and verify the frequency and phase response.

### **Conduct of Practical Examination:**

- 1. All laboratory experiments are to be included for practical examination.
- 2. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- **3.**Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

#### HDL LAB B.E., V Semester, ELECTRONICS & COMMUNICATION ENGINEERING / **TELECOMMUNICATION ENGINEERING** [As per Choice Based Credit System (CBCS) Scheme]

#### CREDITS - 02

**Course Objectives:** This course will enable students to:

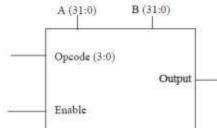

- Familiarize with the CAD tool to write HDL programs.
- Understand simulation and synthesis of digital design.
- Program FPGAs/CPLDs to synthesize the digital designs.
- Interface hardware to programmable ICs through I/O ports.
- Choose either Verilog or VHDL for a given Abstraction level.

Note: Programming can be done using any compiler. Download the programs on a FPGA/CPLD boards such as Apex/Acex/Max/Spartan/Sinfi or equivalent and performance testing may be done using 32 channel pattern generator and logic analyzer apart from verification by simulation with tools such as Altera/Modelsim or equivalent.

Laboratory Experiments

#### Part-A: PROGRAMMING

- 1. Write Verilog code to realize all the logic gates
- 2. Write a Verilog program for the following combinational designs
  - a. 2 to 4 decoder
  - b. 8 to 3 (encoder without priority & with priority)
  - c. 8 to 1 multiplexer.
  - d. 4 bit binary to gray converter
  - e. Multiplexer, de-multiplexer, comparator.
- 3. Write a VHDL and Verilog code to describe the functions of a Full Adder using three modeling styles.
- 4. Write a Verilog code to model 32 bit ALU using the schematic diagram shown below

- ALU should use combinational logic to calculate an output based on the four bit op-code input.
- ALU should pass the result to the out bus when enable line in high, and tri-state the out bus when the enable line is low.
- ALU should decode the 4 bit op-code according to the example given below.

| OPCODE | <b>ALU Operation</b> |
|--------|----------------------|
| 1.     | A+B                  |
| 2.     | A-B                  |
| 3.     | A Complement         |
| 4.     | A*B                  |
| 5.     | A AND B              |
| 6.     | A OR B               |
| 7.     | A NAND B             |
| 8.     | A XOR B              |

- 5. Develop the Verilog code for the following flip-flops, SR, D, JK and T.
- 6. Design a 4 bit binary, BCD counters (Synchronous reset and Asynchronous reset) and "any sequence" counters, using Verilog code.

# Part-B: INTERFACING (at least four of the following must be covered using VHDL/Verilog)

- 1. Write HDL code to display messages on an alpha numeric LCD display.
- 2. Write HDL code to interface Hex key pad and display the key code on seven segment display.
- **3.** Write HDL code to control speed, direction of DC and Stepper motor.
- **4.** Write HDL code to accept Analog signal, Temperature sensor and display the data on LCD or Seven segment display.
- 5. Write HDL code to generate different waveforms (Sine, Square, Triangle, Ramp etc.,) using DAC change the frequency.
- 6. Write HDL code to simulate Elevator operation.

**Course Outcomes:** At the end of this course, students should be able to:

- Write the Verilog/VHDL programs to simulate Combinational circuits in Dataflow, Behavioral and Gate level Abstractions.
- Describe sequential circuits like flip flops and counters in Behavioral description and obtain simulation waveforms.
- Synthesize Combinational and Sequential circuits on programmable ICs and test the hardware.
- Interface the hardware to the programmable chips and obtain the required output.

# **Conduct of Practical Examination:**

- 1. All laboratory experiments are to be included for practical examination.
- 2. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- 3. Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

**Course objectives:** This course will enable students to:

- Understand the basics of automobile dynamics and design electronics to complement those features.
- Design and implement the electronics that attribute the reliability, safety, and smartness to the automobiles, providing add-on comforts.

#### Module-1

Automotive Fundamentals Overview – Evolution of Automotive Electronics, Automobile Physical Configuration, Survey of Major Automotive Systems, The Engine – Engine Block, Cylinder Head, Four Stroke Cycle, Engine Control, Ignition System -Spark plug, High voltage circuit and distribution, Spark pulse generation, Ignition Timing, Diesel Engine, Drive Train - Transmission, Drive Shaft, Differential, Suspension, Brakes, Steering System (Text 1: Chapter1), Starter Battery –Operating principle: (Text 2: Pg. 407-410) (4 hours)

**The Basics of Electronic Engine Control** – Motivation for Electronic Engine Control – Exhaust Emissions, Fuel Economy, Concept of an Electronic Engine control system, Definition of General terms, Definition of Engine performance terms, Engine mapping, Effect of Air/Fuel ratio, spark timing and EGR on performance, Control Strategy, Electronic Fuel control system, Analysis of intake manifold pressure, Electronic Ignition. (Text 1: Chapter 5) (4 hours) **L1, L2** 

#### Module-2

Automotive Control System applications of Sensors and Actuators – Typical Electronic Engine Control System, Variables to be measured (Text 1: Chapter 6) (1 hour)

Automotive Sensors – Airflow rate sensor, Strain Gauge MAP sensor, Engine Crankshaft Angular Position Sensor, Magnetic Reluctance Position Sensor, Hall effect Position Sensor, Shielded Field Sensor, Optical Crankshaft Position Sensor, Throttle Angle Sensor (TAS), Engine Coolant Temperature (ECT) Sensor, Exhaust Gas Oxygen (O2/EGO) Lambda Sensors, Piezoelectric Knock Sensor. (Text 1: Chapter 6) (5 hours) Automotive Actuators – Solenoid, Fuel Injector, EGR Actuator, Ignition System (Text 1: Chapter 6) (2 hours) L1, L2

#### Module-3

**Digital Engine Control Systems** – Digital Engine control features, Control modes for fuel Control (Seven Modes), EGR Control, Electronic Ignition Control - Closed loop Ignition timing, Spark Advance Correction Scheme, Integrated Engine Control System -Secondary Air Management, Evaporative Emissions Canister Purge, Automatic System Adjustment, System Diagnostics. (Text 1: Chapter 7) (6 hours)

**Control Units** – Operating conditions, Design, Data processing, Programming, Digital modules in the Control unit, Control unit software. (Text 2: Pg. 196-207) (2 hours) **L1, L2** 

Module-4

**Automotive Networking** –Bus Systems – Classification, Applications in the vehicle, Coupling of networks, Examples of networked vehicles (Text 2: Pg. 85-91), Buses - CAN Bus, LIN Bus, MOST Bus, Bluetooth, Flex Ray, Diagnostic Interfaces. (Text 2: Pg. 92-151) (6 hours)

**Vehicle Motion Control** – Typical Cruise Control System, Digital Cruise Control System, Digital Speed Sensor, Throttle Actuator, Digital Cruise Control configuration, Cruise Control Electronics (Digital only), Antilock Brake System (ABS) (Text 1: Chapter 8) (2 hours) L1, L2

Module-5

**Automotive Diagnostics**–Timing Light, Engine Analyzer, On-board diagnostics, Offboard diagnostics, Expert Systems, Occupant Protection Systems – Accelerometer based Air Bag systems. (Text 1: Chapter 10) (2 hours)

**Future Automotive Electronic Systems** – Alternative Fuel Engines, Electric and Hybrid vehicles, Fuel cell powered cars, Collision Avoidance Radar warning Systems, Low tire pressure warning system, Heads Up display, Speech Synthesis, Navigation – Navigation Sensors - Radio Navigation, Signpost navigation, dead reckoning navigation, Voice Recognition Cell Phone dialing, Advanced Cruise Control, Stability Augmentation, Automatic driving Control (Text 1: Chapter 11) (6 hours) **L1, L2, L3** 

**Course Outcomes:** At the end of the course, students will be able to:

- Acquire an overview of automotive components, subsystems, and basics of Electronic Engine Control in today's automotive industry.
- Use available automotive sensors and actuators while interfacing with microcontrollers / microprocessors during automotive system design.
- Understand the networking of various modules in automotive systems, communication protocols and diagnostics of the sub systems.
- Design and implement the electronics that attribute the reliability, safety, and smartness to the automobiles, providing add-on comforts and get fair idea on future Automotive Electronic Systems.

**Course Outcomes:** At the end of the course, students will be able to:

- Explain the basics of Object Oriented Programming concepts.
- Apply the object initialization and destroy concept using constructors and destructors.
- Apply the concept of polymorphism to implement compile time polymorphism in programs by using overloading methods and operators.
- Use the concept of inheritance to reduce the length of code and evaluate the usefulness.
- Apply the concept of run time polymorphism by using virtual functions, overriding functions and abstract class in programs.
- Use I/O operations and file streams in programs.

switch, 8051 C programming to generate a square waveform on a port pin using a Timer interrupt.

Interfacing 8051 to ADC-0804, LCD and Stepper motor and their 8051 Assembly language interfacing programming. **L1, L2, L3** 

### **Evaluation of CIE Marks:**

It is suggested that at least a few simple programs to be executed by students using a simulation software or an 8051 microcontroller kit for better understanding of the course. This activity can be considered for the evaluation of 10 marks out of 40 CIE (Continuous Internal Evaluation) marks, reserved for the other activities.

**Course outcomes:** At the end of the course, students will be able to:

- Explain the difference between Microprocessors & Microcontrollers, Architecture of 8051 Microcontroller, Interfacing of 8051 to external memory and Instruction set of 8051.
- Write 8051 Assembly level programs using 8051 instruction set.
- Explain the Interrupt system, operation of Timers/Counters and Serial port of 8051.
- Write 8051 Assembly language program to generate timings and waveforms using 8051 timers, to send & receive serial data using 8051 serial port and to generate an external interrupt using a switch.
- Write 8051 C programs to generate square wave on 8051 I/O port pin using interrupt and to send & receive serial data using 8051 serial port.
- Interface simple switches, simple LEDs, ADC 0804, LCD and Stepper Motor to 8051 using 8051 I/O ports.

|                 | CREDITS – 04         | 4            |    |

**Course Objectives:** The objectives of the course is to enable students to:

- Understand the mathematical representation of signal, symbol, noise and channels.
- Apply the concept of signal conversion to symbols and signal processing to symbols in transmitter and receiver functional blocks.
- Compute performance issues and parameters for symbol processing and recovery in ideal and corrupted channel conditions.
- Compute performance parameters and mitigate for these parameters in corrupted and distorted channel conditions.

#### Module-1

**Bandpass Signal to Equivalent Lowpass**: Hilbert Transform, Pre-envelopes, Complex envelopes, Canonical representation of bandpass signals, Complex low pass representation of bandpass systems, Complex representation of band pass signals and systems (Text 1: 2.8, 2.9, 2.10, 2.11, 2.12, 2.13).

**Line codes:** Unipolar, Polar, Bipolar (AMI) and Manchester code and their power spectral densities (Text 1: Ch 6.10).

Overview of HDB3, B3ZS, B6ZS (Ref. 1: 7.2) L1, L2, L3

#### Module-2

**Signaling over AWGN Channels**- Introduction, Geometric representation of signals, Gram-Schmidt Orthogonalization procedure, Conversion of the continuous AWGN channel into a vector channel, Optimum receivers using coherent detection: ML Decoding, Correlation receiver, matched filter receiver (Text 1: 7.1, 7.2, 7.3, 7.4). **L1, L2, L3** 

#### **Module-3**

**Digital Modulation Techniques**: Phase shift Keying techniques using coherent detection: generation, detection and error probabilities of BPSK and QPSK, M–ary PSK, M–ary QAM (Relevant topics in Text 1 of 7.6, 7.7).

Frequency shift keying techniques using Coherent detection: BFSK generation, detection and error probability (Relevant topics in Text 1 of 7.8).

Non coherent orthogonal modulation techniques: BFSK, DPSK Symbol representation, Block diagrams treatment of Transmitter and Receiver, Probability of error (without derivation of probability of error equation) (Text 1: 7.11, 7.12. 7.13). L1, L2, L3

### Module-4

**Communication through Band Limited Channels**: Digital Transmission through Band limited channels: Digital PAM Transmission through Band limited Channels, Signal design for Band limited Channels: Design of band limited signals for zero ISI– The Nyquist Criterion (statement only), Design of band limited signals with controlled ISI-Partial Response signals, Probability of error for detection of Digital PAM: Probability of error for detection of Digital PAM with Zero ISI, Symbol–by–Symbol detection of data with controlled ISI (Text 2: 9.1, 9.2, 9.3.1, 9.3.2).

Channel Equalization: Linear Equalizers (ZFE, MMSE), Adaptive Equalizers (Text 2: 9.4.2). **L1, L2, L3** 

#### Module-5

**Principles of Spread Spectrum:** Spread Spectrum Communication Systems: Model of a Spread Spectrum Digital Communication System, Direct Sequence Spread Spectrum Systems, Effect of De-spreading on a narrowband Interference, Probability of error (statement only), Some applications of DS Spread Spectrum Signals, Generation of PN Sequences, Frequency Hopped Spread Spectrum, CDMA based on IS-95 (Text 2: 11.3.1, 11.3.2, 11.3.3, 11.3.4, 11.3.5, 11.4.2). **L1, L2, L3** 

**Course Outcomes:** At the end of the course, the students will be able to:

- Associate and apply the concepts of Bandpass sampling to well specified signals and channels.
- Analyze and compute performance parameters and transfer rates for low pas and bandpass symbol under ideal and corrupted non band limited channels.
- Test and validate symbol processing and performance parameters at the receiver under ideal and corrupted bandlimited channels.
- Demonstrate by simulation and emulation that bandpass signals subjected to corrupted and distorted symbols in a bandlimited channel, can be demodulated and estimated at receiver to meet specified performance criteria.

#### **CREDITS – 04**

**Course objectives:** This course will enable students to:

- Understand the architectural features and instruction set of 32 bit microcontroller ARM Cortex M3.
- Program ARM Cortex M3 using the various instructions and C language for different applications.
- Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.
- Develop the hardware software co-design and firmware design approaches.
- Explain the need of real time operating system for embedded system applications.

#### Module-1

**ARM-32 bit Microcontroller:** Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, Debugging support, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 1: Ch 1, 2, 3) **L1, L2** 

#### Module-2

**ARM Cortex M3 Instruction Sets and Programming:** Assembly basics, Instruction list and description, Useful instructions, Memory mapping, Bit-band operations and CMSIS, Assembly and C language Programming (Text 1: Ch-4, Ch-5, Ch-10 (10.1, 10.2, 10.3, 10.5 only) **L1, L2, L3** 

#### Module-3

**Embedded System Components:** Embedded Vs General computing system, Classification of Embedded systems, Major applications and purpose of ES. Core of an Embedded System including all types of processor/controller, Memory, Sensors, Actuators, LED, 7 segment LED display, Optocoupler, Relay, Piezo buzzer, Push button switch, Communication Interface (onboard and external types), Embedded firmware, Other system components.

(Text 2: All the Topics from Ch-1 and Ch-2, excluding 2.3.3.4 (stepper motor), 2.3.3.8 (keyboard) and 2.3.3.9 (PPI) sections). **L1, L2, L3** 

Module-4

**Embedded System Design Concepts:** Characteristics and Quality Attributes of Embedded Systems, Operational and non-operational quality attributes, Embedded Systems-Application and Domain specific, Hardware Software Co-Design and Program Modelling (excluding UML), Embedded firmware design and development (excluding C language).

(Text 2: Ch-3, Ch-4, Ch-7 (Sections 7.1, 7.2 only), Ch-9 (Sections 9.1, 9.2, 9.3.1, 9.3.2 only) L1, L2, L3

#### Module-5

**RTOS and IDE for Embedded System Design:** Operating System basics, Types of operating systems, Task, process and threads (Only POSIX Threads with an example program), Thread preemption, Preemptive Task scheduling techniques, Task Communication, Task synchronization issues – Racing and Deadlock, Concept of Binary and counting semaphores (Mutex example without any program), How to choose an RTOS, Integration and testing of Embedded hardware and firmware, Embedded system Development Environment – Block diagram (excluding Keil), Disassembler/decompiler, simulator, emulator and debugging techniques (Text 2: Ch-10 (Sections 10.1, 10.2, 10.3, 10.5.2, 10.7, 10.8.1.1, 10.8.1.2, 10.8.2.2, 10.10 only), Ch 12, Ch-13 (a block diagram before 13.1, 13.3, 13.4, 13.5, 13.6 only) **L1, L2, L3** 

**Course outcomes:** After studying this course, students will be able to:

- Describe the architectural features and instructions of 32 bit microcontroller ARM Cortex M3.
- Apply the knowledge gained for Programming ARM Cortex M3 for different applications.
- Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.
- Develop the hardware / software co-design and firmware design approaches.
- Explain the need of real time operating system for embedded system applications.

**Course outcomes:** At the end of the course, the students will be able to:

- Demonstrate understanding of MOS transistor theory, CMOS fabrication flow and technology scaling.
- Draw the basic gates using the stick and layout diagrams with the knowledge of physical design aspects.
- Interpret Memory elements along with timing considerations
- Demonstrate knowledge of FPGA based system design
- Interpret testing and testability issues in VLSI Design
- Analyze CMOS subsystems and architectural issues with the design constraints.

### **Text Books:**

- **1. "Basic VLSI Design"** Douglas A. Pucknell& Kamran Eshraghian, PHI 3rd Edition (original Edition 1994).
- 2. "CMOS VLSI Design- A Circuits and Systems Perspective"- Neil H.E. Weste, David Harris, Ayan Banerjee, 3rd Edition, Pearson Education.
- **3. "FPGA Based System Design"-** Wayne Wolf, Pearson Education, 2004, Technology and Engineering.

#### **COMPUTER COMMUNICATION NETWORKS** B.E., VI Semester, Electronics & Communication Engineering / **Telecommunication Engineering** [As per Choice Based Credit System (CBCS) Scheme] **Course Code** 17EC64 **CIE Marks** 40 Number of Lecture 04 SEE Marks 60 Hours/Week Total Number of 50 (10 Hours / Module) Exam Hours 03 **Lecture Hours CREDITS - 04**

**Course Objectives:** This course will enable students to:

- Understand the layering architecture of OSI reference model and TCP/IP protocol suite.
- Understand the protocols associated with each layer.
- Learn the different networking architectures and their representations.
- Learn the various routing techniques and the transport layer services.

### Module-1

**Introduction:** Data Communications: Components, Representations, Data Flow, Networks: Physical Structures, Network Types: LAN, WAN, Switching, Internet.

**Network Models:** Protocol Layering: Scenarios, Principles, Logical Connections, TCP/IP Protocol Suite: Layered Architecture, Layers in TCP/IP suite, Description of layers, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing, The OSI Model: OSI Versus TCP/IP.

**Data-Link Layer:** Introduction: Nodes and Links, Services, Categories' of link, Sublayers, Link Layer addressing: Types of addresses, ARP. Data Link Control (DLC) services: Framing, Flow and Error Control, Data Link Layer Protocols: Simple Protocol, Stop and Wait protocol, Piggybacking. **L1**, **L2** 

### Module-2

**Media Access Control:** Random Access: ALOHA, CSMA, CSMA/CD, CSMA/CA. Controlled Access: Reservation, Polling, Token Passing.

**Wired LANs: Ethernet:** Ethernet Protocol: IEEE802, Ethernet Evolution, Standard Ethernet: Characteristics, Addressing, Access Method, Efficiency, Implementation, Fast Ethernet: Access Method, Physical Layer, Gigabit Ethernet: MAC Sublayer, Physical Layer, 10 Gigabit Ethernet. **L1, L2** 

### Module-3

**Wireless LANs:** Introduction: Architectural Comparison, Characteristics, IEEE 802.11: Architecture, MAC Sublayer, Addressing Mechanism, Physical Layer, Bluetooth: Architecture, Layers.

**Connecting Devices:** Hubs, Switches, **Virtual LANs:** Membership, Configuration, Communication between Switches and Routers, Advantages.

**Network Layer:** Introduction, Network Layer services: Packetizing, Routing and Forwarding, Other services, Packet Switching: Datagram Approach, Virtual Circuit Approach, IPV4 Addresses: Address Space, Classful Addressing, Classless Addressing, DHCP, Network Address Resolution, Forwarding of IP Packets: Based on destination Address and Label. **L1, L2** 

Module-4

Network Layer Protocols: Internet Protocol (IP): Datagram Format, Fragmentation,

Options, Security of IPv4 Datagrams, ICMPv4: Messages, Debugging Tools, Mobile IP: Addressing, Agents, Three Phases, Inefficiency in Mobile IP.

**Unicast Routing:** Introduction, Routing Algorithms: Distance Vector Routing, Link State Routing, Path vector routing, Unicast Routing Protocol: Internet Structure, Routing Information Protocol, Open Shortest Path First, Border Gateway Protocol Version 4. **L1**, **L2**, **L3** 

#### Module-5

**Transport Layer:** Introduction: Transport Layer Services, Connectionless and Connection oriented Protocols, Transport Layer Protocols: Simple protocol, Stop and wait protocol, Go-Back-N Protocol, Selective repeat protocol, User Datagram Protocol: User Datagram, UDP Services, UDP Applications, Transmission Control Protocol: TCP Services, TCP Features, Segment, Connection, State Transition diagram, Windows in TCP, Flow control, Error control, TCP congestion control. **L1, L2** 

**Course Outcomes:** At the end of the course, the students will be able to:

- Identify the protocols and services of Data link layer.
- Identify the protocols and functions associated with the transport layer services.
- Describe the layering architecture of computer networks and distinguish between the OSI reference model and TCP/IP protocol suite.
- Distinguish the basic network configurations and standards associated with each network.
- Construct a network model and determine the routing of packets using different routing algorithms.

#### Module-4

### GSM Roaming Scenarios and Handover:

Mobile application part interfaces, Location registration and location update, Connection establishment and termination, Handover. (up to 6.4.1 only in Text2) **Services:** 

Classical GSM services, Popular GSM services: SMS and MMS.

# Improved data services in GSM: GPRS, HSCSD and EDGE

GPRS System architecture of GPRS, Services, Session management, mobility management and routing, Protocol architecture, Signaling plane, Interworking with IP networks, Air interface, Authentication and ciphering, Summary of GPRS.

HSCSD: Architecture, Air interface, HSCSD resource allocation and capacity issues. EDGE: The EDGE concept, EDGE physical layer, modulation and coding, EDGE: effects on the GSM system architecture, ECSD and EGPRS. (Text 2) **L1, L2** 

#### Module-5

**CDMA Technology** – Introduction to CDMA,CDMA frequency bands, CDMA Network and System Architecture, CDMA Channel concept, Forward Logical Channels, Reverse logical Channels, CDMA frame format, CDMA System Operations(Initialization/Registration), Call Establishment, CDMA Call handoff,IS-95B,CDMA2000,W-CDMA,UMTS,CDMA data networks, Evolution of CDMA to 3G, CDMA 2000 RAN Components, CDMA 2000 Packet Data Service. (Text 3) **L1, L2** 

**Course outcomes:** At the end of the course, the students will be able to:

- Apply the understanding of statistical characterization of urban mobile channels to compute the performance for simple modulation schemes.
- Demonstrate the limitations of GSM, GPRS and CDMA to meet high data rate requirements and limited improvements that are needed.
- Analyze the call process procedure between a calling number and called number for all scenarios in GSM or CDMA based systems.
- Test and validate voice and data call handling for various scenarios in GSM and CDMA systems for national and international interworking situations.

through estimation of different parameters of stationary random process clearly considering practical application specifications.

- Analyse convergence and stability issues associated with adaptive filter design and come up with optimum solutions for real life applications taking care of requirements in terms of complexity and accuracy.
- Design and implement filtering solutions for applications such as channel equalisation, interference cancelling and prediction considering present day challenges.

### **Course Objectives:** The objectives of this course are:

- Understand the basics of ANN and comparison with Human brain
- Provide knowledge on Generalization and function approximation and various architectures of building an ANN
- Provide knowledge of reinforcement learning using neural networks
- Provide knowledge of unsupervised learning using neural networks.

#### Module-1

**Introduction**: Biological Neuron – Artificial Neural Model - Types of activation functions – **Architecture**: Feedforward and Feedback, Convex Sets, Convex Hull and Linear Separability, Non-Linear Separable Problem. XOR Problem, Multilayer Networks.

**Learning:** Learning Algorithms, Error correction and Gradient Descent Rules, Learning objective of TLNs, Perceptron Learning Algorithm, Perceptron Convergence Theorem. **L1, L2** 

#### Module-2

**Supervised Learning:** Perceptron learning and Non Separable sets,  $\alpha$ -Least Mean Square Learning, MSE Error surface, Steepest Descent Search,  $\mu$ -LMS approximate to gradient descent, Application of LMS to Noise Cancelling, Multi-layered Network Architecture, Backpropagation Learning Algorithm, Practical consideration of BP algorithm. **L1, L2, L3** 

### Module-3

**Support Vector Machines and Radial Basis Function:** Learning from Examples, Statistical Learning Theory, Support Vector Machines, SVM application to Image Classification, Radial Basis Function Regularization theory, Generalized RBF Networks, Learning in RBFNs, RBF application to face recognition. **L1, L2, L3** 

#### Module-4

**Support Vector Machines and Radial Basis Function:** Learning from Examples, Statistical Learning Theory, Support Vector Machines, SVM application to Image Classification, Radial Basis Function Regularization theory, Generalized RBF Networks, Learning in RBFNs, RBF application to face recognition. **L1, L2, L3** 

#### **Module-5**

**Self-organization Feature Map:** Maximal Eigenvector Filtering, Extracting Principal Components, Generalized Learning Laws, Vector Quantization, Self-organization Feature Maps, Application of SOM, Growing Neural Gas. **L1, L2, L3** 

**Course outcomes:** At the end of the course, students should be able to:

- Understand the role of neural networks in engineering, artificial intelligence, and cognitive modelling.
- Understand the concepts and techniques of neural networks through the study of the most important neural network models.
- Evaluate whether neural networks are appropriate to a particular application.
- Apply neural networks to particular applications, and to know what steps to take

### DIGITAL SWITCHING SYSTEMS B.E., VI Semester, Electronics & Communication Engineering/ Telecommunication Engineering [As per Choice Based Credit System (CBCS) Scheme]

| Course Code       | 17EC654               | CIE Marks  | 40 |
|-------------------|-----------------------|------------|----|
| Number of Lecture | 03                    | SEE Marks  | 60 |
| Hours/Week        |                       |            |    |
| Total Number of   | 40 (8 Hours / Module) | Exam Hours | 03 |
| Lecture Hours     |                       |            |    |
|                   | CREDITS - 03          |            | •  |

**Course Objectives:** This course will enable students to

- Understand the basics of telecommunication networks and digital transmission of data.
- Study about the evolution of switching systems and the digital switching.
- Study about the telecommunication traffic and its measurements.
- Learn the technologies associated with the data switching operations.
- Understand the use of software for the switching and its maintenance.

#### Module-1

**DEVELOPMENT OF TELECOMMUNICATIONS:** Network structure, Network services, terminology, Regulation, Standards. Introduction to telecommunications transmission, Power levels, Four wire circuits, Digital transmission, FDM,TDM, PDH and SDH (Text-1) **L1, L2** 

#### Module-2

**EVOLUTION OF SWITCHING SYSTEMS:** Introduction, Message switching, Circuit switching, Functions of switching systems, Distribution systems, Basics of crossbar systems, Electronic switching.

**DIGITAL SWITCHING SYSTEMS:** Switching system hierarchy, Evolution of digital switching systems, Stored program control switching systems, Building blocks of a digital switching system, Basic call processing. (Text-1 and 2) **L1, L2** 

#### Module-3

**TELECOMMUNICATIONS TRAFFIC:** Introduction, Unit of traffic, Congestion, Traffic measurement, Mathematical model, lost call systems, Queuing systems.

**SWITCHING SYSTEMS:** Introduction, Single stage networks, Gradings, Link Systems, GOS of Linked systems. (Text-1) **L1, L2** 

### Module-4

**TIME DIVISION SWITCHING:** Introduction, space and time switching, Time switching networks, Synchronisation.

**SWITCHING SYSTEM SOFTWARE:** Introduction, Basic software architecture, Software architecture for level 1to 3 control, Digital switching system software classification, Call models, Software linkages during call, Feature flow diagram, Feature interaction. (Text-1 and 2) **L1, L2** 

Module-5

**MAINTENANCE OF DIGITAL SWITCHING SYSTEM:** Introduction , Software maintenance, Interface of a typical digital switching system central office, System outage and its impact on digital switching system reliability, Impact of software patches on digital switching system maintainability, A methodology for proper maintenance of digital switching system

A GENERIC DIGITAL SWITCHING SYSTEM MODEL: Introduction, Hardware

architecture, Software architecture, Recovery strategy, Simple call through a digital system, Common characteristics of digital switching systems. Reliability analysis. (Text-2) **L1, L2** 

**Course Outcomes:** At the end of the course, students should be able to:

- Describe the electromechanical switching systems and its comparison with the digital switching.
- Determine the telecommunication traffic and its measurements.
- Define the technologies associated with the data switching operations.
- Describe the software aspects of switching systems and its maintenance.

#### **Text Books:**

- 2. Digital Switching Systems, Syed R. Ali, TMH Ed 2002.

#### **Reference Book:**

Digital Telephony - John C Bellamy: Wiley India Pvt. Ltd, 3rd Ed, 2008.

### <u>MICROELECTRONICS</u> B.E., VI Semester, Electronics & Communication Engineering [As per Choice Based Credit System (CBCS) Scheme]

| Course Code                      | 17EC655               | CIE Marks  | 40 |
|----------------------------------|-----------------------|------------|----|
| Number of Lecture<br>Hours/Week  | 03                    | SEE Marks  | 60 |
| Total Number of Lecture<br>Hours | 40 (8 Hours / Module) | Exam Hours | 03 |
|                                  | CDEDITS 02            |            |    |

#### **CREDITS – 03**

**Course Objectives:** This course will enable students to:

- Be familiar with the MOSFET physical structure and operation, terminal characteristics, circuit models and basic circuit applications.
- Confront integrated device and/or circuit design problems, identify the design issues, and develop solutions.
- Analyze and design microelectronic circuits for linear amplifier and digital applications.
- Contrast the input/output and gain characteristics of single-transistor, differential and common two-transistor linear amplifier building block stages.

### Module-1

**MOSFETS:** Device Structure and Physical Operation, V-I Characteristics, MOSFET Circuits at DC, MOSFET as an amplifier and as a switch. **L1, L2** 

### Module-2

**MOSFETS (continued):** Biasing in MOS amplifier Circuits, Small Signal Operation and Models, Basic MOSFET amplifier, MOSFET internal capacitances, frequency response of CS amplifier. **L1, L2** 

#### Module-3

**MOSFETS (continued):** Discrete circuit MOS amplifiers.

**Single Stage IC Amplifier:** Comparison of MOSFET and BJT, Current sources, Current mirrors and Current steering circuits, high frequency response- general considerations.

L1, L2, L3

### Module-4

**Single Stage IC Amplifier (continued):** CS with active loads, high frequency response of CS, CG amplifiers with active loads, high frequency response of CG, Cascode amplifiers. CS with source degeneration (only MOS amplifiers to be dealt). **L1, L2** 

#### Module-5

**Differential and Multistage Amplifiers:** The MOS differential pair, small signal operation of MOS differential pair, Differential amplifier with active loads, and frequency response of the differential amplifiers. Multistage amplifiers (only MOS amplifiers to be dealt). **L1, L2** 

**Course outcomes:** After studying this course, students will be able to:

- Explain the underlying physics and principles of operation of Metaloxidesemiconductor (MOS) capacitors and MOS field effect transistors (MOSFETs).
- Describe and apply simple large signal circuit models for MOSFETs.
- Analyze and design microelectronic circuits for linear amplifier for digital applications.
- Use of discrete MOS circuits to design Single stage and Multistage amplifiers to

meet stated operating specifications.

| RBT Levels                      | L1, L2, L3   | Exam Hours | 03 |
|                                 |  |            |    |

### CREDITS – 02

**Course objectives:** This course will enable students to:

- Understand the instruction set of ARM Cortex M3, a 32 bit microcontroller and the software tool required for programming in Assembly and C language.
- Program ARM Cortex M3 using the various instructions in assembly level language for different applications.
- Interface external devices and I/O with ARM Cortex M3.
- Develop C language programs and library functions for embedded system applications.

### Laboratory Experiments

**PART-A:** Conduct the following Study experiments to learn ALP using ARM Cortex M3 Registers using an Evaluation board and the required software tool.

- 1. ALP to multiply two 16 bit binary numbers.
- 2. ALP to find the sum of first 10 integer numbers.

**PART-B:** Conduct the following experiments on an ARM CORTEX M3 evaluation board using evaluation version of Embedded 'C' & Keil uVision-4 tool/compiler.

- 1. Display "Hello World" message using Internal UART.
- 2. Interface and Control a DC Motor.
- 3. Interface a Stepper motor and rotate it in clockwise and anti-clockwise direction.

- 4. Interface a DAC and generate Triangular and Square waveforms.
- 5. Interface a 4x4 keyboard and display the key code on an LCD.
- 6. Using the Internal PWM module of ARM controller generate PWM and vary its duty cycle.
- 7. Demonstrate the use of an external interrupt to toggle an LED On/Off.
- 8. Display the Hex digits 0 to F on a 7-segment LED interface, with an appropriate delay in between.

9. Interface a simple Switch and display its status through Relay, Buzzer and LED.

10. Measure Ambient temperature using a sensor and SPI ADC IC.

**Course outcomes:** After studying this course, students will be able to:

- Understand the instruction set of 32 bit microcontroller ARM Cortex M3, and the software tool required for programming in Assembly and C language.
- Develop assembly language programs using ARM Cortex M3 for different applications.
- Interface external devices and I/O with ARM Cortex M3.
- Develop C language programs and library functions for embedded system applications.

### **Conduction of Practical Examination:**

- 1. PART-B experiments using Embedded-C are only to be considered for the practical examination. PART-A ALP programs are for study purpose and can be considered for Internal Marks evaluation.
- 2. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- 3. Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

### <u>COMPUTER NETWORKS LAB</u> B.E., VI Semester, Electronics & Communication Engineering [As per Choice Based Credit System (CBCS) Scheme]

| Course Code                     | 17ECL68  | <b>CIE Marks</b> | 40 |
|---------------------------------|--|------------------|----|
| Number of Lecture<br>Hours/Week | 01Hr Tutorial (Instructions)<br>+ 02 Hours Laboratory = 03 | SEE Marks        | 60 |
| RBT Levels                      | L1, L2, L3   | Exam Hours       | 03 |

#### **CREDITS – 02**

**Course objectives:** This course will enable students to:

- Choose suitable tools to model a network and understand the protocols at various OSI reference levels.
- Design a suitable network and simulate using a Network simulator tool.
- Simulate the networking concepts and protocols using C/C++ programming.
- Model the networks for different configurations and analyze the results.

### Laboratory Experiments

### PART-A: Simulation experiments using NS2/ NS3/ OPNET/ NCTUNS/ NetSim/ QualNet or any other equivalent tool

- 1. Implement a point to point network with four nodes and duplex links between them. Analyze the network performance by setting the queue size and varying the bandwidth.
- 2. Implement a four node point to point network with links n0-n2, n1-n2 and n2-n3. Apply TCP agent between n0-n3 and UDP between n1-n3. Apply relevant applications over TCP and UDP agents changing the parameter and determine the number of packets sent by TCP/UDP.
- 3. Implement Ethernet LAN using n (6-10) nodes. Compare the throughput by changing the error rate and data rate.
- 4. Implement Ethernet LAN using n nodes and assign multiple traffic to the nodes and obtain congestion window for different sources/ destinations.
- 5. Implement ESS with transmission nodes in Wireless LAN and obtain the performance parameters.
- 6. Implementation of Link state routing algorithm.

### PART-B: Implement the following in C/C++

1. Write a program for a HLDC frame to perform the following.

i) Bit stuffing

- ii) Character stuffing.
- 2. Write a program for distance vector algorithm to find suitable path for transmission.

- 3. Implement Dijkstra's algorithm to compute the shortest routing path.
- 4. For the given data, use CRC-CCITT polynomial to obtain CRC code. Verify the program for the cases

a. Without error

- b. With error
- 5. Implementation of Stop and Wait Protocol and Sliding Window Protocol
- **6.** Write a program for congestion control using leaky bucket algorithm.

**Course outcomes:** On the completion of this laboratory course, the students will be able to:

- Use the network simulator for learning and practice of networking algorithms.
- Illustrate the operations of network protocols and algorithms using C programming.
- Simulate the network with different configurations to measure the performance parameters.
- Implement the data link and routing protocols using C programming.

### **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- For examination one question from software and one question from hardware or only one hardware experiments based on the complexity to be set.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

### <u>6<sup>th</sup> Semester Open Electives Syllabus for the Courses Offered by EC/TC</u> Board:

### DATA STRUCTURE USING C++ B.E VI Semester (Open Elective) [As per Choice Based Credit System (CBCS) Scheme]

| Course Code             | 17EC661                | CIE Marks  | 40 |
|-------------------------|------------------------|------------|----|
| Number of Lecture       | 03                     | SEE Marks  | 60 |
| Hours/Week              |                        |            |    |
| Total Number of Lecture | 40 (08 Hrs per Module) | Exam Hours | 03 |
| Hours                   |                        |            |    |
|                         |                        |            |    |

#### **CREDITS – 03**

Course objectives: This course will enable students to

- Explain fundamentals of data structures and their applications essential for programming/problem solving
- Analyze Linear Data Structures: Stack, Queues, Lists
- Analyze Non Linear Data Structures: Trees
- Assess appropriate data structure during program development/Problem Solving

### Module -1

**INTRODUCTION:** Functions and parameters, Dynamic memory allocation, Recursion. **LINEAR LISTS:** Data objects and structures, Linear list data structures, Array Representation, Vector Representation, Singly Linked lists and chains. **L1, L2** 

### Module -2

ARRAYS AND MATRICS: Arrays, Matrices, Special matrices, Sparse matrices.

**STACKS:** The abstract data types, Array Representation, Linked Representation, Applications-Parenthesis Matching & Towers of Hanoi. **L1, L2, L3** 

#### Module -3

**QUEUES:** The abstract data types, Array Representation, Linked Representation, Applications-Railroad car arrangement.

HASHING: Dictionaries, Linear representation, Hash table representation. L1, L2, L3

### Module -4

**BINARY AND OTHER TREES:** Trees, Binary trees, Properties and representation of binary trees, Common binary tree operations, Binary tree traversal the ADT binary tree, ADT binary tree and the class linked binary tree. **L1, L2, L3** 

### Module -5

**Priority Queues:** Linear lists, Heaps, Applications-Heap Sorting. **Search Trees:** Binary search trees operations and implementation, Binary Search trees with duplicates. **L1, L2, L3**  **Course outcomes:** After studying this course, students will be able to:

- Acquire knowledge of Dynamic memory allocation, Various types of data structures, operations and algorithms and Sparse matrices and Hashing
- Understand non Linear data structures trees and their applications
- Design appropriate data structures for solving computing problems
- Analyze the operations of Linear Data structures: Stack, Queue and Linked List and their applications

**Course outcomes:** After studying this course, students will be able to:

- Describe the characteristics of different power devices and identify the applications.
- Illustrate the working of DC-DC converter and inverter circuit.
- Determine the output response of a thyristor circuit with various triggering options.
- Determine the response of controlled rectifier with resistive and inductive loads.

#### **Evaluation of CIE Marks:**

It is suggested that at least a few experiments of Power Electronics are conducted by the students for better understanding of the course. This activity can be considered for the evaluation of 10 marks out of 40 CIE (Continuous Internal Evaluation) marks, reserved for the other activities.

#### **Question paper pattern:**

- The question paper will have ten questions
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of Three sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module
- The students will have to answer 5 full questions, selecting one full question from each module

### DIGITAL SYSTEM DESIGN USING VERILOG

### **B.E., VI Semester (Open Elective)**

[As per Choice Based Credit System (CBCS) Scheme]

| Course Code:                   | 17EC663                | CIE Marks: 40  |  |
|--------------------------------|------------------------|----------------|--|
| Number of Lecture Hours/Week:  | 03                     | SEE Marks: 60  |  |
| Total Number of Lecture Hours: | 40 (08 Hrs per module) | Exam Hours: 03 |  |
| CREDITS - 03                   |                        |                |  |

**Course Objectives:** This course will enable students to

- Understand the concepts of Verilog Language.
- Design the digital systems as an activity in a larger systems design context.
- Study the design and operation of semiconductor memories frequently used in application specific digital system.
- Inspect how effectively IC's are embedded in package and assembled in PCB's for different application.
- Design and diagnosis of processors and I/O controllers used in embedded systems.

### Module -1

#### Introduction and Methodology:

Digital Systems and Embedded Systems, Real-World Circuits, Models, Design Methodology (1.1, 1.3 to 1.5 of Text).

**Combinational Basics:** Combinational Components and Circuits, Verification of Combinational Circuits.(2.3 and 2.4 of Text)

**Sequential Basics**: Sequential Datapaths and Control Clocked Synchronous Timing Methodology (4.3 up to 4.3.1,4.4 up to 4.4.1 of Text). **L1, L2, L3** 

#### Module -2

**Memories:** Concepts, Memory Types, Error Detection and Correction (Chap 5 of Text). **L1, L2, L3** 

#### Module -3

**Implementation Fabrics:** Integrated Circuits, Programmable Logic Devices, Packaging and Circuit boards, Interconnection and Signal integrity (Chap 6 of Text). **L1, L2, L3** 

#### Module -4

**I/O interfacing:** I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software (Chap 8 of Text). **L1, L2, L3** 

#### Module -5

**Design Methodology:** Design flow, Design optimization, Design for test, Nontechnical Issues (Chap 10 of Text). **L1, L2, L3, L4** 

**Course outcomes:** After studying this course, students will be able to:

- Construct the combinational circuits, using discrete gates and programmable logic devices.
- Describe Verilog model for sequential circuits and test pattern generation.
- Design a semiconductor memory for specific chip design.
- Design embedded systems using small microcontrollers, larger CPUs/DSPs, or hard or soft processor cores.
- Synthesize different types of processor and I/O controllers that are used in embedded system.

# Text Book:

Peter J. Ashenden, "Digital Design: An Embedded Systems Approach Using VERILOG", Elesvier, 2010.

# **B.E E&C SEVENTH SEMESTER SYLLABUS**

#### MICROWAVES AND ANTENNAS B.E., VII Semester, Electronics &Communication Engineering [As per Choice Based Credit System (CBCS) Scheme]

| Course Code                   | 17EC71                 | CIE Marks  | 40 |
|-------------------------------|------------------------|------------|----|
| Number of Lecture Hours/Week  | 04                     | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50 (10 Hours / Module) | Exam Hours | 03 |
|                               |                        |            |    |

### **CREDITS – 04**

**Course objectives:** This course will enable students to:

- Describe the microwave properties and its transmission media
- Describe microwave devices for several applications
- Understand the basics of antenna theory
- Select antennas for specific applications

#### Module-1

**Microwave Tubes:** Introduction, Reflex Klystron Oscillator, Mechanism of Oscillations, Modes of Oscillations, Mode Curve (Qualitative Analysis only). (Text 1: 9.1, 9.2.2) **Microwave Transmission Lines:** Microwave Frequencies, Microwave devices, Microwave Systems, Transmission Line equations and solutions, Reflection Coefficient and Transmission Coefficient, Standing Wave and Standing Wave Ratio, Smith Chart, Single Stub matching. (Text 2: 0.1, 0.2, 0.3, 3.1, 3.2, 3.3, 3.5, 3.6 Except Double stub matching) **L1, L2** 

#### Module-2

Microwave Network theory: Symmetrical Z and Y-Parameters for Reciprocal Networks, S matrix representation of Multi-Port Networks. (Text 1: 6.1, 6.2, 6.3) Microwave Passive Devices: Coaxial Connectors and Adapters, Attenuators, Phase Shifters, Waveguide Tees, Magic tees. (Text 1: 6.4.2, 6.4.14, 6.4.15, 6.4.16) L1, L2

#### Module-3

**Strip Lines:** Introduction, Micro Strip lines, Parallel Strip lines, Coplanar Strip lines, Shielded Strip Lines. (Text 2: Chapter 11)

**Antenna Basics**: Introduction, Basic Antenna Parameters, Patterns, Beam Area, Radiation Intensity, Beam Efficiency, Directivity and Gain, Antenna Apertures, Effective Height, Bandwidth, Radio Communication Link, Antenna Field Zones & Polarization. (Text 3: 2.1-2.11, 2.13, 2.15) **L1, L2, L3** 

**Module-4** 

**Point Sources and Arrays**: Introduction, Point Sources, Power Patterns, Power Theorem, Radiation Intensity, Field Patterns, Phase Patterns, Arrays of Two Isotropic Point Sources, Pattern Multiplication, Linear Arrays of n Isotropic Point Sources of equal Amplitude and Spacing.(Text 3: 5.1 – 5.11, 5.13)

**Electric Dipoles:** Introduction, Short Electric Dipole, Fields of a Short Dipole (General and Far Field Analyses), Radiation Resistance of a Short Dipole, Thin Linear Antenna (Field Analyses), Radiation Resistances of Lambda/2 Antenna. (Text 3: 6.1 -6.6) **L1, L2, L3, L4** 

#### Module-5

**Loop and Horn Antenna:** Introduction, Small loop, Comparison of Far fields of Small Loop and Short Dipole, The Loop Antenna General Case, Far field Patterns of Circular Loop Antenna with Uniform Current, Radiation Resistance of Loops, Directivity of Circular Loop Antennas with Uniform Current, Horn antennas Rectangular Horn Antennas.(Text 3: 7.1-7.8, 7.19, 7.20)

**Antenna Types:** Helical Antenna, Helical Geometry, Practical Design Considerations of Helical Antenna, Yagi-Uda array, Parabola General Properties, Log Periodic Antenna. (Text 3: 8.3, 8.5, 8.8, 9.5, 11.7) **L1, L2, L3** 

**Course Outcomes:** At the end of the course, students will be able to:

- Describe the use and advantages of microwave transmission
- Analyze various parameters related to microwave transmission lines and waveguides
- Identify microwave devices for several applications
- Analyze various antenna parameters necessary for building an RF system
- Recommend various antenna configurations according to the applications

## <u>DIGITAL IMAGE PROCESSING</u> B.E., VII Semester, Electronics & Communication Engineering [As per Choice Based Credit System (CBCS) Scheme]

| Course Code                      | 17EC72                 | <b>CIE Marks</b> | 40 |
|----------------------------------|------------------------|------------------|----|
| Number of Lecture Hours/Week     | 04                     | SEE Marks        | 60 |
| Total Number of Lecture<br>Hours | 50 (10 Hours / Module) | Exam<br>Hours    | 03 |
|                                  | CDEDITS _ 01           |                  |    |

**Course Objectives:** The objectives of this course are to:

- Understand the fundamentals of digital image processing
- Understand the image transform used in digital image processing
- Understand the image enhancement techniques used in digital image processing
- Understand the image restoration techniques and methods used in digital image processing
- Understand the Morphological Operations and Segmentation used in digital image processing

### Module-1

**Digital Image Fundamentals**: What is Digital Image Processing?, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations. [Text: Chapter 1 and Chapter 2: Sections 2.1 to 2.5, 2.6.2] **L1, L2** 

### Module-2

**Spatial Domain:** Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters

**Frequency Domain**: Preliminary Concepts, The Discrete Fourier Transform (DFT) of Two Variables, Properties of the 2-D DFT, Filtering in the Frequency Domain, Image Smoothing and Image Sharpening Using Frequency Domain Filters, Selective Filtering.

[Text: Chapter 3: Sections 3.2 to 3.6 and Chapter 4: Sections 4.2, 4.5 to 4.10] **L1, L2, L3** 

#### Module-3

**Restoration:** Noise models, Restoration in the Presence of Noise Only using Spatial Filtering and Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering. [Text: Chapter 5: Sections 5.2, to 5.9] **L1, L2, L3** 

Module-4

**Color Image Processing:** Color Fundamentals, Color Models, Pseudocolor Image Processing.

**Wavelets:** Background, Multiresolution Expansions.

**Morphological Image Processing:** Preliminaries, Erosion and Dilation, Opening and Closing, The Hit-or-Miss Transforms, Some Basic Morphological Algorithms.

[Text: Chapter 6: Sections 6.1 to 6.3, Chapter 7: Sections 7.1 and 7.2, Chapter 9: Sections 9.1 to 9.5] **L1, L2, L3** 

Module-5

**Segmentation**: Point, Line, and Edge Detection, Thresholding, Region-Based Segmentation, Segmentation Using Morphological Watersheds.

**Representation and Description:** Representation, Boundary descriptors. [Text: Chapter 10: Sections 10.2, to 10.5 and Chapter 11: Sections 11.1 and 11.2] **L1, L2, L3** 

**Course Outcomes:** At the end of the course students should be able to:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Apply image processing techniques in both the spatial and frequency (Fourier) domains.
- Design image analysis techniques in the form of image segmentation and to evaluate the Methodologies for segmentation.
- Conduct independent study and analysis of Image Enhancement techniques.
- Text Book: Digital Image Processing- Rafel C Gonzalez and Richard E. Woods, PHI 3rd Edition 2010.

- 1. **Digital Image Processing** S.Jayaraman, S.Esakkirajan, T.Veerakumar, Tata McGraw Hill 2014.
- 2. Fundamentals of Digital Image Processing-A. K. Jain, Pearson 2004.

| CREDITS - 04   |                        |            |    |  |

#### CREDITS - 04

**Course Objectives:** This course will enable students to:

- Understand the construction and working of various power devices.
- Study and analysis of thyristor circuits with different triggering conditions.
- Learn the applications of power devices in controlled rectifiers, converters and inverters.
- Study of power electronics circuits under various load conditions.

#### Module-1

Introduction - Applications of Power Electronics, Power Semiconductor Devices, Control Characteristics of Power Devices, types of Power Electronic Circuits, Peripheral Effects. Power Transistors: Power BJTs: Steady state characteristics. Power MOSFETs: device operation, switching characteristics, IGBTs: device operation, output and transfer characteristics, di/dt and dv/dt limitations. (Text 1) **L1, L2** 

#### Module-2

Thyristors - Introduction, Principle of Operation of SCR, Static Anode-Cathode Characteristics of SCR, Two transisitor model of SCR, Gate Characteristics of SCR, Turn-ON Methods, Turn-OFF Mechanism, Turn-OFF Methods: Natural and Forced Commutation – Class A and Class B types, Gate Trigger Circuit: Resistance Firing Circuit, Resistance capacitance firing circuit, UJT Firing Circuit. (Text 2) **L1, L2, L3** 

#### **Module-3**

Controlled Rectifiers - Introduction, Principle of Phase-Controlled Converter Operation, Single-Phase Full Converter with RL Load, Single-Phase Dual Converters, Single-Phase Semi Converter with RL load.

AC Voltage Controllers - Introduction, Principles of ON-OFF Control, Principle of Phase Control, Single phase controllers with resistive and inductive loads. (Text 1) **L1, L2, L3** 

#### Module-4

DC-DC Converters - Introduction, principle of step-down operation and it's analysis with RL load, principle of step-up operation, Step-up converter with a resistive load, Performance parameters, Converter classification, Switching mode regulators: Buck regulator, Boost regulator, Buck-Boost Regulators, Chopper circuit design. (Text 1) **L1, L2** 

#### Module-5

Pulse Width Modulated Inverters- Introduction, principle of operation, performance parameters, Single phase bridge inverters, voltage control of single phase inverters, current source inverters, Variable DC-link inverter, Boost inverter, Inverter circuit design.

Static Switches: Introduction, Single phase AC switches, DC Switches, Solid state relays, Microelectronic relays. (Text 1) **L1, L2** 

**Course Outcomes:** At the end of the course students should be able to:

- Describe the characteristics of different power devices and identify the various applications associated with it.
- Illustrate the working of power circuit as DC-DC converter.
- Illustrate the operation of inverter circuit and static switches.
- Determine the output response of a thyristor circuit with various triggering options.
- Determine the response of controlled rectifier with resistive and inductive loads.

### **Evaluation of Internal Assessment Marks:**

It is suggested that at least 4 experiments of Power Electronics to be conducted by the students. This activity can be considered for the evaluation of 10 marks out of 40 Continuous Internal Evaluation marks, reserved for the other activities.

**Course Outcomes:** After studying this course, students will be able to:

- Understand basics of different multimedia networks and applications.
- Understand different compression techniques to compress audio and video.
- Describe multimedia Communication across Networks.
- Analyse different media types to represent them in digital form.
- Compress different types of text and images using different compression techniques and analyse DMS.

## Cardiological signal processing:

Basic Electrocardiography, ECG data acquisition, ECG lead system, ECG signal characteristics (parameters and their estimation), Analog filters, ECG amplifier, and QRS detector, Power spectrum of the ECG, Bandpass filtering techniques, Differentiation techniques, Template matching techniques, A QRS detection algorithm, Realtime ECG processing algorithm, ECG interpretation, ST segment analyzer, Portable arrhythmia monitor. (Text -2) **L1, L2, L3** 

Module-5

**Neurological signal processing:** The brain and its potentials, The electrophysiological origin of brain waves, The EEG signal and its characteristics (EEG rhythms, waves, and transients), Correlation.

**Analysis of EEG channels:** Detection of EEG rhythms, Template matching for EEG, spike and wave detection (Text-2). **L1, L2, L3** 

**Course outcomes:** At the end of the course, students will be able to:

- Possess the basic mathematical, scientific and computational skills necessary to analyse ECG and EEG signals.
- Apply classical and modern filtering and compression techniques for ECG and EEG signals
- Develop a thorough understanding on basics of ECG and EEG feature extraction.

#### **Text Books:**

- 1. Biomedical Digital Signal Processing- Willis J. Tompkins, PHI 2001.
- 2. Biomedical Signal Processing Principles and Techniques- D C Reddy, McGraw-Hill publications 2005

**Course Outcomes:** At the end of the course, students should be able to:

- Understand the fundamentals of Real time systems and its classifications.
- Understand the concepts of computer control, operating system and the suitable computer hardware requirements for real-time applications.
- Develop the software languages to meet Real time applications.
- Apply suitable methodologies to design and develop Real-Time Systems.

Module-5

**One-Way Hash Functions:** Background, Snefru, N-Hash, MD4, MD5, Secure Hash Algorithm [SHA],One way hash functions using symmetric block algorithms, Using public key algorithms, Choosing a one-way hash functions, Message Authentication Codes. Digital Signature Algorithm, Discrete Logarithm Signature Scheme (Text 2: Chapter 18: Section 18.1 to 18.5, 18.7, 18.11 to 18.14 and Chapter 20: Section 20.1, 20.4) **L1, L2, L3** 

**Course Outcomes:** After studying this course, students will be able to:

- Use basic cryptographic algorithms to encrypt the data.
- Generate some pseudorandom numbers required for cryptographic applications.
- Provide authentication and protection for encrypted data.

**Floor Planning:** Problem formulation, Constraint based floor planning, Rectangular dualization, Simulated evolution algorithms. **L1, L2, L3** 

**Pin Assignment**: Problem formulation. Classification of pin assignment problems, General pin assignment problem.

**Placement:** Problem formulation, Classification of placement algorithms. Simulation based placement: Simulated annealing, simulated evolution, force directed placement. Partitioning based algorithms: Breur's Algorithm, Terminal propagation algorithm, Other algorithms for placement. **L1, L2, L3** 

#### Module 5

**Global Routing:** Problem formulation, Classification of Global routing algorithms, Maze routing algorithms: Lee's algorithm, Soukup's algorithm and Hadlock's Algorithm, Line probe algorithms.

**Detailed Routing:** Problem formulation, Routing considerations, models, channel routing and switch box routing problems. General river routing problem, Single row routing problem.

Two-layer channel routing algorithms: Basic Left Edge Algorithm, Dogleg router, Symbolic router-YACR2. **L1, L2, L3** 

**Course Outcomes:** After studying this course, students will be able to:

- Appreciate the problems related to physical design of VLSI
- Use genralized graph theoretic approach to VLSI problems
- Design Simulated Annealing and Evolutionary algorithms
- Know various approaches to write generalized algorithms

#### Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of Three sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

# Text Book:

Algorithms for VLSI Physical Design Automation, 3<sup>rd</sup> Ed, Naveed Sherwani, 1999 Kluwer Academic Publishers, Reprint 2009 Springer (India) Private Ltd. ISBN 978-81-8128-317-7.

#### **DSP ALGORITHMS and ARCHITECTURE B.E., VII Semester, Electronics & Communication Engineering /Telecommunication Engineering** [As per Choice Based Credit System (CBCS) Scheme] **Course Code** 17EC751 **CIE Marks** 40 SEE Marks Number of Lecture 03 60 Hours/Week Total Number of 40 (8 Hours / Exam Hours 03 Lecture Hours Module) **CREDITS – 03**

**Course Objectives:** This course will enable students to:

- Figure out the knowledge and concepts of digital signal processing techniques.
- Understand the computational building blocks of DSP processors and its speed issues.
- Understand the various addressing modes, peripherals, interrupts and pipelining structure of TMS320C54xx processor.
- Learn how to interface the external devices to TMS320C54xx processor in various modes.
- Understand basic DSP algorithms with their implementation.

# Module-1

# Introduction to Digital Signal Processing:

Introduction, A Digital Signal – Processing System, The Sampling Process, Discrete Time Sequences, Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT), Linear Time-Invariant Systems, Digital Filters, Decimation and Interpolation.

# **Computational Accuracy in DSP Implementations:**

Number Formats for Signals and Coefficients in DSP Systems, Dynamic Range and Precision, Sources of Error in DSP Implementation. **L1, L2** 

# Module-2

# Architectures for Programmable Digital Signal – Processing Devices:

Introduction, Basic Architectural Features, DSP Computational Building Blocks, Bus Architecture and Memory, Data Addressing Capabilities, Address Generation Unit, Programmability and Program Execution, Speed Issues, Features for External Interfacing. **L1**, **L2**, **L3** 

#### Module-3

# Programmable Digital Signal Processors:

Introduction, Commercial Digital Signal-processing Devices, Data Addressing Modes of TMS32OC54XX, Memory Space of TMS32OC54xx Processors, Program Control. Detail Study of TMS320C54X & 54xx Instructions and Programming, On – Chip Peripherals, Interrupts of TMS32OC54XX Processors, Pipeline Operation of TMS32OC54xx Processor. **L1, L2, L3** 

#### Module-4

# Implementation of Basic DSP Algorithms:

Introduction, The Q – notation, FIR Filters, IIR Filters, Interpolation and Decimation Filters (one example in each case).

# **Implementation of FFT Algorithms:**

Introduction, An FFT Algorithm for DFT Computation, Overflow and Scaling, Bit – Reversed Index. Generation & Implementation on the TMS32OC54xx. **L1, L2, L3** 

Module-5

**Interfacing Memory and Parallel I/O Peripherals to Programmable DSP Devices:** Introduction, Memory Space Organization, External Bus Interfacing Signals. Memory Interface, Parallel I/O Interface, Programmed I/O, Interrupts and I/O Direct Memory Access (DMA).

#### Interfacing and Applications of DSP Processors:

Introduction, Synchronous Serial Interface, A CODEC Interface Circuit, DSP Based Bio-telemetry Receiver, A Speech Processing System, An Image Processing System. **L1, L2, L3** 

Course Outcomes: At the end of this course, students would be able to

- Comprehend the knowledge and concepts of digital signal processing techniques.
- Apply the knowledge of DSP computational building blocks to achieve speed in DSP architecture or processor.
- Apply knowledge of various types of addressing modes, interrupts, peripherals and pipelining structure of TMS320C54xx processor.
- Develop basic DSP algorithms using DSP processors.
- Discuss about synchronous serial interface and multichannel buffered serial port (McBSP) of DSP device.
- Demonstrate the programming of CODEC interfacing.

#### Text Book:

"Digital Signal Processing", Avatar Singh and S. Srinivasan, Thomson Learning, 2004.

- 1. "Digital Signal Processing: A practical approach", Ifeachor E. C., Jervis B. W Pearson-Education, PHI, 2002.
- 2. "Digital Signal Processors", B Venkataramani and M Bhaskar, TMH, 2nd, 2010
- 3. "Architectures for Digital Signal Processing", Peter Pirsch John Weily, 2008

#### **IoT & WIRELESS SENSOR NETWORKS B.E., VII Semester, Electronics & Communication Engineering /Telecommunication Engineering** [As per Choice Based Credit System (CBCS) Scheme] **Course Code** 17EC752 **CIE Marks** 40 Number of Lecture 03 **SEE Marks** 60 Hours/Week Total Number of 40 (8 Hours / Exam Hours 03 **Lecture Hours** Module) **CREDITS - 03**

**Course Objectives:** This course will enable students to:

- Understand various sources of IoT & M2M communication protocols.
- Describe Cloud computing and design principles of IoT.
- Become aware of MQTT clients, MQTT server and its programming.
- Understand the architecture and design principles of WSNs.
- Enrich the knowledge about MAC and routing protocols in WSNs.

# Module-1

**Overview of Internet of Things:** IoT Conceptual Framework, IoT Architectural View, Technology Behind IoT, Sources of IoT,M2M communication, Examples of IoT. Modified OSI Model for the IoT/M2M Systems, data enrichment, data consolidation and device management at IoT/M2M Gateway, web communication protocols used by connected IoT/M2M devices, Message communication protocols (CoAP-SMS, CoAP-MQ, MQTT,XMPP) for IoT/M2M devices. **L1, L2** 

#### **Module-2**

**Architecture and Design Principles for IoT:** Internet connectivity, Internet-based communication,IPv4, IPv6,6LoWPAN protocol, IP Addressing in the IoT, Application layer protocols: HTTP, HTTPS,FTP,TELNET and ports.

**Data Collection, Storage and Computing using a Cloud Platform:** Introduction, Cloud computing paradigm for data collection, storage and computing, Cloud service models, IoT Cloud- based data collection, storage and computing services using Nimbits. **L1, L2** 

#### Module-3

**Prototyping and Designing Software for IoT Applications:** Introduction, Prototyping Embedded device software, Programming Embedded Device Arduino Platform using IDE, Reading data from sensors and devices, Devices, Gateways, Internet and Web/Cloud services software development.

Programming MQTT clients and MQTT server. Introduction to IoT privacy and security. Vulnerabilities, security requirements and threat analysis, IoT Security Tomography and layered attacker model. **L1, L2, L3** 

#### **Overview of Wireless Sensor Networks:**

Challenges for Wireless Sensor Networks, Enabling Technologies for Wireless Sensor Networks.

**Architectures**: Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture-Sensor Network Scenarios, Optimization Goals and Figures of Merit, Design principles for WSNs, Service interfaces of WSNs Gateway Concepts. **L1, L2, L3** 

#### Module-5

#### **Communication Protocols:**

Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC, The Mediation Device Protocol, Wakeup Radio Concepts, Contention based protocols(CSMA,PAMAS), Schedule based protocols (LEACH, SMACS, TRAMA) Address and Name Management in WSNs, Assignment of MAC Addresses, Routing Protocols-Energy-Efficient Routing, Geographic Routing, Hierarchical networks by clustering. L1, L2, L3

**Course Outcomes:** At the end of the course, students will be able to:

- Describe the OSI Model for the IoT/M2M Systems.
- Understand the architecture and design principles for IoT.
- Learn the programming for IoT Applications.
- Identify the communication protocols which best suits the WSNs.

# CREDITS – 03

**Course Objectives:** This course will enable students to:

- Understand the various parallel computer models and conditions of parallelism
- Explain the control flow, dataflow and demand driven machines
- Study CISC, RISC, superscalar, VLIW and multiprocessor architectures
- Understand the concept of pipelining and memory hierarchy design
- Explain cache coherence protocols.

# Module-1

**Parallel Computer Models:** The state of computing, Classification of parallel computers, Multiprocessors and multicomputer, Multivectors and SIMD computers. **Program and Network Properties:** Conditions of parallelism, Data and resource Dependences, Hardware and software parallelism, Program partitioning and scheduling, Grain Size and latency. **L1, L2** 

# Module-2

**Program flow mechanisms:** Control flow versus data flow, Data flow Architecture, Demand driven mechanisms, Comparisons of flow mechanisms.

**Principles of Scalable Performance**: Performance Metrics and Measures, Parallel Processing Applications, Speedup Performance Laws, Scalability Analysis and Approaches. **L1, L2, L3** 

# Module-3

**Speedup Performance Laws:** Amdhal's law, Gustafson's law, Memory bounded speed up model, Scalability Analysis and Approaches.

**Advanced Processors:** Advanced processor technology, Instruction-set Architectures, CISC Scalar Processors, RISC Scalar Processors, Superscalar Processors, VLIW Architectures. **L1, L2, L3** 

# Module-4

**Pipelining:** Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, branch prediction, Arithmetic Pipeline Design.

**Memory Hierarchy Design:** Cache basics & cache performance, reducing miss rate and miss penalty, multilevel cache hierarchies, main memory organizations, design of memory hierarchies. **L1, L2, L3** 

#### **Module-5**

**Multiprocessor Architectures:** Symmetric shared memory architectures, distributed shared memory architectures, models of memory consistency, cache coherence protocols (MSI, MESI, MOESI), scalable cache coherence, overview of directory based approaches, design challenges of directory protocols, memory based directory protocols, cache based directory protocols. **L1, L2, L3** 

**Course Outcomes:** At the end of the course, the students will be able to:

- Explain parallel computer models and conditions of parallelism
- Differentiate control flow, dataflow, demand driven mechanisms
- Explain the principle of scalable performance
- Discuss advanced processors architectures like CISC, RISC, superscalar and VLIW
- Understand the basics of instruction pipelining and memory technologies
- Explain the issues in multiprocessor architectures

# Question paper pattern:

The question paper will have ten questions.

- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of Three sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

| CREDITS – 03       |               |            |    |  |

**Course Objectives:** This course will enable students to

• Understand the basic principle of satellite orbits and trajectories.

- Study of electronic systems associated with a satellite and the earth station.
- Understand the various technologies associated with the satellite communication.
- Focus on a communication satellite and the national satellite system.
- Study of satellite applications focusing various domains services such as remote sensing, weather forecasting and navigation.

#### Module-1

**Satellite Orbits and Trajectories:** Definition, Basic Principles, Orbital parameters, Injection velocity and satellite trajectory, Types of Satellite orbits, Orbital perturbations, Satellite stabilization, Orbital effects on satellite's performance, Eclipses, Look angles: Azimuth angle, Elevation angle. **L1, L2** 

#### Module-2

**Satellite subsystem:** Power supply subsystem, Attitude and Orbit control, Tracking, Telemetry and command subsystem, Payload.

**Earth Station:** Types of earth station, Architecture, Design considerations, Testing, Earth station Hardware, Satellite tracking. **L1, L2** 

## Module-3

**Multiple Access Techniques**: Introduction, FDMA (No derivation), SCPC Systems, MCPC Systems, TDMA, CDMA, SDMA.

**Satellite Link Design Fundamentals**: Transmission Equation, Satellite Link Parameters, Propagation considerations. **L1, L2, L3** 

**Module-4** 

**Communication Satellites:** Introduction, Related Applications, Frequency Bands, Payloads, Satellite Vs. Terrestrial Networks, Satellite Telephony, Satellite Television, Satellite radio, Regional satellite Systems, National Satellite Systems. **L1, L2** 

### Module-5

**Remote Sensing Satellites**: Classification of remote sensing systems, orbits, Payloads, Types of images: Image Classification, Interpretation, Applications.

**Weather Forecasting Satellites**: Fundamentals, Images, Orbits, Payloads, Applications.

Navigation Satellites: Development of Satellite Navigation Systems, GPS system, Applications. L1, L2, L3

**Course Outcomes:** At the end of the course, the students will be able to:

- Describe the satellite orbits and its trajectories with the definitions of parameters associated with it.
- Describe the electronic hardware systems associated with the satellite subsystem and earth station.
- Describe the various applications of satellite with the focus on national satellite system.
- Compute the satellite link parameters under various propagation conditions with the illustration of multiple access techniques.

#### **CREDITS – 02**

**Course objectives:** This course will enable students to:

- Design and demonstrate the digital modulation techniques
- Demonstrate and measure the wave propagation in microstrip antennas
- Characteristics of microstrip devices and measurement of its parameters.
- Model an optical communication system and study its characteristics.
- Simulate the digital communication concepts and compute and display various parameters along with plots/figures.

# Laboratory Experiments

PART-A: Following Experiments No. 1 to 4 has to be performed using discrete components.

- 1. Time Division Multiplexing and Demultiplexing of two bandlimited signals.
- 2. ASK generation and detection
- 3. FSK generation and detection
- 4. PSK generation and detection
- 5. Measurement of frequency, guide wavelength, power, VSWR and attenuation in microwave test bench.
- 6. Measurement of directivity and gain of microstrip dipole and Yagi antennas.

# 7. Determination of

- a. Coupling and isolation characteristics of microstrip directional coupler.
- b. Resonance characteristics of microstrip ring resonator and computation of dielectric constant of the substrate.
- c. Power division and isolation of microstrip power divider.
- 8. Measurement of propagation loss, bending loss and numerical aperture of an optical fiber.

PART-B: Simulation Experiments using SCILAB/MATLAB/Simulink or LabView

- 1. Simulate NRZ, RZ, half-sinusoid and raised cosine pulses and generate eye diagram for binary polar signaling.
- 2. Simulate the Pulse code modulation and demodulation system and display the waveforms.
- 3. Simulate the QPSK transmitter and receiver. Plot the signals and its constellation diagram.
- **4.** Test the performance of a binary differential phase shift keying system by simulating the non-coherent detection of binary DPSK.

**Course outcomes:** On the completion of this laboratory course, the students will be able to:

- Determine the characteristics and response of microwave devices and optical waveguide.
- Determine the characteristics of microstrip antennas and devices and compute the parameters associated with it.
- Simulate the digital modulation schemes with the display of waveforms and computation of performance parameters.
- Design and test the digital modulation circuits/systems and display the waveforms.

# **Conduct of Practical Examination:**

- All laboratory experiments are to be considered for practical examination.
- For examination one question from **PART-A** and one question from **PART-B or** only one question from **PART-B** experiments based on the complexity, to be set.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

5. For the SAR based ADC mentioned in the figure below draw the mixed signal schematic and verify the functionality by completing ASIC Design FLOW. [Specifications to GDS-II]

\* An appropriate constraint should be given.

- \*\* Appropriate specification should be given.
- \*\*\* Applicable Library should be added & information should be given to the Designer.

**Course outcomes:** On the completion of this laboratory course, the students will be able to:

- Write test bench to simulate various digital circuits.
- Interpret concepts of DC Analysis, AC Analysis and Transient Analysis in analog circuits.
- Design and simulate basic CMOS circuits like inverter, common source amplifier and differential amplifiers.
- Use basic amplifiers and further design higher level circuits like operational amplifier and analog/digital converters to meet desired parameters.
- Use transistors to design gates and further using gates realize shift registers and adders to meet desired parameters.

# **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- For examination, one question from **PART-A** and one question from **PART-B** to be set.
- Students are allowed to pick one experiment from the lot.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

# **B.E E&C EIGTH SEMESTER SYLLABUS**

#### WIRELESS CELLULAR and LTE 4G BROADBAND B.E., VIII Semester, Electronics & Communication Engineering/ **Telecommunication Engineering** [As per Choice Based Credit System (CBCS) Scheme] **Course Code** 17EC81 **CIE Marks** 40 Number of 04 SEE Marks 60 Lecture Total Number 50 (10 Hours / Module) Exam Hours 03 **CREDITS – 04**

**Course Objectives:** This course will enable students to:

- Understand the basics of LTE standardization phases and specifications.
- Explain the system architecture of LTE and E-UTRAN, the layer of LTE, based on the use of OFDMA and SC-FDMA principles.
- Analyze the role of LTE radio interface protocols to set up, reconfigure and release the Radio Bearer, for transferring the EPS bearer.
- Analyze the main factors affecting LTE performance including mobile speed and transmission bandwidth.

Module – 1

**Key Enablers for LTE features:** OFDM, Single carrier FDMA, Single carrier FDE, Channel Dependent Multiuser Resource Scheduling, Multi antenna Techniques, IP based Flat network Architecture, LTE Network Architecture. (Sec 1.4-1.5 of Text).

**Wireless Fundamentals:** Cellular concept, Broadband wireless channel (BWC), Fading in BWC, Modeling BWC – Empirical and Statistical models, Mitigation of Narrow band and Broadband Fading (Sec 2.2 – 2.7of Text). **L1, L2** 

Module – 2

**Multicarrier Modulation:** OFDM basics, OFDM in LTE, Timing and Frequency Synchronization, PAR, SC-FDE (Sec 3.2 – 3.6 of Text).

**OFDMA and SC-FDMA:**OFDM with FDMA,TDMA,CDMA, OFDMA, SC-FDMA, OFDMA and SC-FDMA in LTE (Sec 4.1 – 4.3, 4.5 of Text).

**Multiple Antenna Transmission and Reception:** Spatial Diversity overview, Receive Diversity, Transmit Diversity, Interference cancellation and signal enhancement, Spatial Multiplexing, Choice between Diversity, Interference suppression and Spatial Multiplexing (Sec 5.1 – 5.6 of Text). **L1, L2** 

## Module – 3

**Overview and Channel Structure of LTE:** Introduction to LTE, Channel Structure of LTE, Downlink OFDMA Radio Resource, Uplink SC-FDMA Radio Resource(Sec 6.1 – 6.4 of Text).

Downlink Transport Channel Processing: Overview, Downlink shared

channels, Downlink Control Channels, Broadcast channels, Multicast channels, Downlink physical channels, H-ARQ on Downlink(Sec 7.1 – 7.7 of Text). **L1, L2** 

Module – 4

**Uplink Channel Transport Processing:** Overview, Uplink shared channels, Uplink Control Information, Uplink Reference signals, Random Access Channels, H-ARQ on uplink (Sec 8.1 – 8.6 of Text).

**Physical Layer Procedures:** Hybrid – ARQ procedures, Channel Quality Indicator CQI feedback, Precoder for closed loop MIMO Operations, Uplink channel sounding, Buffer status Reporting in uplink, Scheduling and Resource Allocation, Cell Search, Random Access Procedures, Power Control in uplink(Sec 9.1-9.6, 9.8, 9.9, 9.10 Text). **L1, L2** 

# Module – 5

# Radio Resource Management and Mobility Management:

PDCP overview, MAC/RLC overview, RRC overview, Mobility Management, Intercell Interference Coordination (Sec 10.1 – 10.5 of Text). **L1, L2** 

**Course Outcomes:** At the end of the course, students will be able to:

- Understand the system architecture and the functional standard specified in LTE 4G.
- Analyze the role of LTE radio interface protocols and EPS Data convergence protocols to set up, reconfigure and release data and voice from users.
- Demonstrate the UTRAN and EPS handling processes from set up to release including mobility management for a variety of data call scenarios.
- Test and Evaluate the Performance of resource management and packet data processing and transport algorithms.

**WDM Concepts and Components:** Overview of WDM: Operational Principles of WDM, WDM standards, Mach-Zehnder Interferometer Multiplexers, Isolators and Circulators, Fiber grating filters, Dielectric Thin-Film Filters, Diffraction Gratings, Active Optical Components, Tunable light sources,

**Optical amplifiers:** Basic application and Types, Semiconductor optical amplifiers, Erbium Doped Fiber Amplifiers, Raman Amplifiers, Wideband Optical Amplifiers. (Text 1) **L1, L2** 

## Module -5

**Optical Networks:** Optical network evolution and concepts: Optical networking terminology, Optical network node and switching elements, Wavelength division multiplexed networks, Public telecommunication network overview. Optical network transmission modes, layers and protocols: Synchronous networks, Asynchronous transfer mode, OSI reference model, Optical transport network, Internet protocol, Wavelength routing networks: Routing and wavelength assignment, Optical switching networks: Optical circuit switched networks, packet switched networks, Multiprotocol Label Switching, Optical burst switching networks, Optical network deployment: Long-haul networks, Metropoliton area networks, Access networks, Local area networks. (Text 2) **L1, L2** 

**Course Outcomes:** At the end of the course, students will be able to:

- 1. Classification and working of optical fiber with different modes of signal propagation.
- 2. Describe the transmission characteristics and losses in optical fiber communication.
- 3. Describe the construction and working principle of optical connectors, multiplexers and amplifiers.
- 4. Describe the constructional features and the characteristics of optical sources and detectors.
- 5. Illustrate the networking aspects of optical fiber and describe various standards associated with it.

**Overview of Micromanufacturing:** Introduction, Bulk Micromanufacturing, Surface Micromachining, The LIGA Process, Summary on Micromanufacturing. **L1, L2** 

**Course Outcomes:** After studying this course, students will be able to:

- Appreciate the technologies related to Micro Electro Mechanical Systems.
- Understand design and fabrication processes involved with MEMS devices.
- Analyse the MEMS devices and develop suitable mathematical models
- Know various application areas for MEMS device

**Course Objectives:** This course enables students to:

- Introduce the models for speech production
- Develop time and frequency domain techniques for estimating speech parameters
- Introduce a predictive technique for speech compression
- Provide fundamental knowledge required to understand and analyse speech recognition, synthesis and speaker identification systems.

# Module-1

**Fundamentals of Human Speech Production:** The Process of Speech Production, Short-Time Fourier Representation of Speech, The Acoustic Theory of Speech Production, Lossless Tube Models of the Vocal Tract, Digital Models for Sampled Speech Signals. **L1, L2** 

#### Module-2

**Time-Domain Methods for Speech Processing:** Introduction to Short-Time Analysis of Speech, Short-Time Energy and Short-Time Magnitude, Short-Time Zero-Crossing Rate, The Short-Time Autocorrelation Function, The Modified Short-Time Autocorrelation Function, The Short-Time Average Magnitude Difference Function. **L1, L2** 

#### Module-3

**Frequency Domain Representations:** Discrete-Time Fourier Analysis, Short-Time Fourier Analysis, Spectrographic Displays, Overlap Addition(OLA),Method of Synthesis, Filter Bank Summation(FBS) Method of Synthesis, Time-Decimated Filter Banks, Two-Channel Filter Banks, Implementation of the FBS Method Using the FFT, OLA Revisited, Modifications of the STFT. **L1, L2** 

#### Module-4

**The Cepstrum and Homomorphic Speech Processing:** Homomorphic Systems for Convolution, Homomorphic Analysis of the Speech Model, Computing the Short-Time Cepstrum and Complex Cepstrum of Speech, Homomorphic Filtering of Natural Speech, Cepstrum Analysis of All-Pole Models, Cepstrum Distance Measures. L1, L2, L3

Module-5

**Linear Predictive Analysis of Speech Signals:** Basic Principles of Linear Predictive Analysis, Computation of the Gain for the Model, Frequency Domain Interpretations of Linear Predictive Analysis, Solution of the LPC Equations, The Prediction Error Signal, Some Properties of the LPC Polynomial A(z), Relation of Linear Predictive Analysis to Lossless Tube Models, Alternative Representations of the LP Parameters. L1, L2, L3

**Course outcomes:** Upon completion of the course, students will be able to:

- Model speech production system and describe the fundamentals of speech.
- Extract and compare different speech parameters.
- Choose an appropriate speech model for a given application.
- Analyse speech recognition, synthesis and speaker identification systems

# **Text Book:**

# **Course objectives:** This course will enable students to:

- Understand the Radar fundamentals and analyze the radar signals.
- Understand various technologies involved in the design of radar transmitters and receivers.
- Learn various radars like MTI, Doppler and tracking radars and their comparison

#### **Module-1**

**Basics of Radar**: Introduction, Maximum Unambiguous Range, Radar Waveforms, Definitions with respect to pulse waveform - PRF, PRI, Duty Cycle, Peak Transmitter Power, Average transmitter Power.

**Simple form of the Radar Equation**, Radar Block Diagram and Operation, Radar Frequencies, Applications of Radar, The Origins of Radar, Illustrative Problems. (Chapter 1 of Text) **L1, L2, L3** 

#### Module-2

**The Radar Equation:** Prediction of Range Performance, Detection of signal in Noise, Minimum Detectable Signal, Receiver Noise, SNR, Modified Radar Range Equation, Envelope Detector — False Alarm Time and Probability, Probability of Detection, **Radar Cross Section of Targets:** simple targets – sphere, cone-sphere, Transmitter Power, PRF and Range Ambiguities, System Losses (qualitative treatment), Illustrative Problems. (Chapter 2 of Text, Except 2.4, 2.6, 2.8 & 2.11) **L1, L2, L3** 

#### Module-3

**MTI and Pulse Doppler Radar:** Introduction, Principle, Doppler Frequency Shift, Simple CW Radar, Sweep to Sweep subtraction and Delay Line Canceler, MTI Radar with – Power Amplifier Transmitter, Delay Line Cancelers — Frequency Response of Single Delay- Line Canceler, Blind Speeds, Clutter Attenuation, MTI Improvement Factor, N- Pulse Delay-Line Canceler,

**Digital MTI Processing** – Blind phases, I and Q Channels, Digital MTI Doppler signal processor, Moving Target Detector- Original MTD. (Chapter 3: 3.1, 3.2, 3.5, 3.6 of Text) **L1, L2, L3** 

#### Tracking Radar:

#### Module-4

Tracking with Radar- Types of Tracking Radar Systems, Monopulse Tracking-Amplitude Comparison Monopulse (one-and two-coordinates), Phase Comparison Monopulse.

**Sequential Lobing**, Conical Scan Tracking, Block Diagram of Conical Scan Tracking Radar, Tracking in Range, Comparison of Trackers. (Chapter 4: 4.1, 4.2, 4.3 of Text) **L1, L2, L3** 

#### Module-5

**The Radar Antenna:** Functions of The Radar Antenna, Antenna Parameters, Reflector Antennas and Electronically Steered Phased array Antennas. (Chapter 9: 9.1, 9.2 9.4,

# 9.5 of Text)

**Radar Receiver:** The Radar Receiver, Receiver Noise Figure, Super Heterodyne Receiver, Duplexers and Receivers Protectors, Radar Displays. (Chapter 11 of Text) **L1, L2, L3** 

**Course outcomes:** At the end of the course, students will be able to:

- Understand the radar fundamentals and radar signals.
- Explain the working principle of pulse Doppler radars, their applications and limitations
- Describe the working of various radar transmitters and receivers.
- Analyze the range parameters of pulse radar system which affect the system performance

## **Text Book:**

Introduction to Radar Systems- Merrill I Skolink, 3e, TMH, 2001.

## CREDITS – 03

Course Objectives: This course will enable students to:

- Know about security concerns in Email and Internet Protocol.
- Understand cyber security concepts.
- List the problems that can arise in cyber security.
- Discuss the various cyber security frame work.

## Module-1

**Transport Level Security:** Web Security Considerations, Secure Sockets Layer, Transport Layer Security, HTTPS, Secure Shell (SSH) (Text 1: Chapter 15). **L1, L2** 

## Module-2

**E-mail Security:** Pretty Good Privacy, S/MIME, Domain keys identified mail (Text 1: Chapter 17). **L1, L2** 

# Module-3

**IP Security:** IP Security Overview, IP Security Policy, Encapsulation Security Payload (ESP), Combining security Associations Internet Key Exchange. Cryptographic Suites(Text 1: Chapter 18.) **L1, L2** 

## Module-4

**Cyber network security concepts:** Security Architecture, antipattern: signature based malware detection versus polymorphic threads, document driven certification and accreditation, policy driven security certifications. Refactored solution: reputational, behavioural and entropy based malware detection.

**The problems:** cyber antipatterns concept, forces in cyber antipatterns, cyber anti pattern templates, cyber security antipattern catalog (Text-2: Chapter1 & 2). **L1, L2, L3** 

## Module-5

Cyber network security concepts contd. :

# Enterprise security using Zachman framework

Zachman framework for enterprise architecture, primitive models versus composite models, architectural problem solving patterns, enterprise workshop, matrix mining, mini patterns for problem solving meetings.

**Case study:** cyber security hands on – managing administrations and root accounts, installing hardware, reimaging OS, installing system protection/ antimalware, configuring firewalls (Text-2: Chapter 3 & 4). **L1, L2, L3** 

**Course Outcomes:** After studying this course, students will be able to:

- Explain network security protocols
- Understand the basic concepts of cyber security
- Discuss the cyber security problems
- Explain Enterprise Security Framework
- Apply concept of cyber security framework in computer system administration

# Text Books:

- 1. William Stallings, "Cryptography and Network Security Principles and Practice", Pearson Education Inc., 6<sup>th</sup> Edition, 2014, ISBN: 978-93-325-1877-3.
- 2. Thomas J. Mowbray, "Cyber Security Managing Systems, Conducting Testing, and Investigating Intrusions", Wiley.

- 1. Cryptography and Network Security, Behrouz A. Forouzan, TMH, 2007.
- 2. Cryptography and Network Security, Atul Kahate, TMH, 2003.

## **B.E:** Computer Science and Engineering

#### MESTED

| Professiona | Professional Elective-1             |  |         | e – 1*** (List offered by CSE Board only)      |
|-------------|-------------------------------------|--|---------|--|
| 17CS551     | Object Oriented Modeling and Design |  | 17CS561 | Programming in JAVA (Not for CSE/ISE students) |
| 17CS552     | Introduction to Software Testing    |  | 17CS562 | Artificial Intelligence                        |
| 17CS553     | Advanced JAVA and J2EE              |  | 17CS563 | Embedded Systems                               |
| 17CS554     | Advanced Algorithms                 |  | 17CS564 | Dot Net framework for application development; |
|             |                                     |  | 17CS565 | Cloud Computing (Not for CSE/ISE students)     |

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed, if:

• The candidate has no pre – requisite knowledge.

• The candidate has studied similar content course during previous semesters.

 $\cdot$  The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied Professional elective(s). Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

After Studying this course, students will be able to

- Know the use of periodic signals and Fourier series to analyze circuits and system communications.
- Explain the general linear system theory for continuous-time signals and digital signal processing using the Fourier Transform and z-transform.
- Employ appropriate numerical methods to solve algebraic and transcendental equations.
- Apply Green's Theorem, Divergence Theorem and Stokes' theorem in various applications in the field of electro-magnetic and gravitational fields and fluid flow problems.
- Determine the extremals of functionals and solve the simple problems of the calculus of variations.

#### **Question paper pattern:**

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

File handles and handling file – using open(), close() and die ()<br>functions Associative arrays – keys and value functions. Overview of decision making loop<br>control structures – the foreach. Regular expressions – simple and multiple search patterns. The<br>match and substitute operators. Defining and using subroutines. | 08 Hours |
| Topics from chapter 9 and 19 of text book 1. Topics from chapter 11 of reference book 1   |          |
| Course outcomes:  |          |
| After studying this course, students will be able to:   |          |
| <ul> <li>Explain UNIX system and use different commands.</li> <li>Compile Shell scripts for certain functions on different subsystems.</li> <li>Demonstrate use of editors and Perl script writing</li> </ul>   |          |
| Question paper pattern:   |          |

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

#### **Descriptions (if any)**

#### Any simulation package like MultiSim / P-spice /Equivalent software may be used.

Faculty-in-charge should demonstrate and explain the required hardware components and their functional Block diagrams, timing diagrams etc. Students have to prepare a write-up on the same and include it in the Lab record and to be evaluated.

**Laboratory Session-1:** Write-upon analog components; functional block diagram, Pin diagram (if any), waveforms and description. The same information is also taught in theory class; this helps the students to understand better.

**Laboratory Session-2:** Write-upon Logic design components, pin diagram (if any), Timing diagrams, etc. The same information is also taught in theory class; this helps the students to understand better.

*Note: These* **TWO Laboratory sessions** are used to fill the gap between theory classes and practical sessions. Both sessions are to be evaluated for 40 marks as lab experiments.

## Laboratory Experiments:

- 1. a) Design and construct a Schmitt trigger using Op-Amp for given UTP and LTP values and demonstrate its working.
  - b) Design and implement a Schmitt trigger using Op-Amp using a simulation package for two sets of UTP and LTP values and demonstrate its working.
- 2. a) Design and construct a rectangular waveform generator (Op-Amp relaxation oscillator) for given frequency and demonstrate its working.
  - b) Design and implement a rectangular waveform generator (Op-Amp relaxation oscillator) using a simulation package and demonstrate the change in frequency when all resistor values are doubled.
- 3. Design and implement an Astable multivibrator circuit using 555 timer for a given frequency and duty cycle.

NOTE: hardware and software results need to be compared

- 4. Design and implement Half adder, Full Adder, Half Subtractor, Full Subtractor using basic gates.
- 5. a) Given a 4-variable logic expression, simplify it using Entered Variable Map and realize the simplified logic expression using 8:1 multiplexer IC.
  - b) Design and develop the Verilog /VHDL code for an 8:1 multiplexer. Simulate and verify its working.

6. a) Design and implement code converter I)Binary to Gray (II) Gray to Binary Code using basic gates.

7. Design and verify the Truth Table of 3-bit Parity Generator and 4-bit Parity Checker using basic Logic Gates with an even parity bit.

8. a) Realize a J-K Master / Slave Flip-Flop using NAND gates and verify its truth table.

b) Design and develop the Verilog / VHDL code for D Flip-Flop with positive-edge triggering. Simulate and verify it's working.

9. a) Design and implement a mod-n (n<8) synchronous up counter using J-K Flip-Flop ICs and demonstrate its working.

b) Design and develop the Verilog / VHDL code for mod-8 up counter. Simulate and verify it's working.

10. Design and implement an asynchronous counter using decade counter IC to count up from 0 to n (n<=9) and demonstrate on 7-segment display (using IC- 7447).

11. Generate a Ramp output waveform using DAC0800 (Inputs are given to DAC through IC74393 dual 4-bit binary counter).

## **Study experiment**

12. To study 4-bitALU using IC-74181.

#### **Course outcomes:**

On the completion of this laboratory course, the students will be able to:

- Demonstrate various Electronic Devices like Cathode ray Oscilloscope, Signal generators, Digital Trainer Kit, Multimeters and components like Resistors, Capacitors, Op amp and Integrated Circuit.
- Design and demonstrate various combinational logic circuits.
- Design and demonstrate various types of counters and Registers using Flip-flops
- Make use of simulation package to design circuits.
- Infer the working and implementation of ALU.

## **Conduction of Practical Examination:**

- 1. All laboratory experiments (1 to 11 nos) are to be included for practical examination.
- 2. Students are allowed to pick one experiment from the lot.
- 3. Strictly follow the instructions as printed on the cover page of answer script.
- 4. Marks distribution:
  - a) For questions having part a only- Procedure + Conduction + Viva:15 + 70 + 15 =100 Marks
  - b) For questions having part a and b Part a- Procedure + Conduction + Viva:09 + 42 +09= 60 Marks
    - Part b- Procedure + Conduction + Viva:06 + 28 +06= 40 Marks
- 5. Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.

**Descriptions (if any)** 

#### Implement all the experiments in C Language under Linux / Windows environment.

#### Laboratory Experiments:

- 1. Design, Develop and Implement a menu driven Program in C for the following Array operations
  - a. Creating an Array of N Integer Elements
  - b. Display of Array Elements with Suitable Headings
  - c. Inserting an Element (ELEM) at a given valid Position (POS)
  - d. Deleting an Element at a given valid Position(**POS**)
  - e. Exit.

Support the program with functions for each of the above operations.

- 2. Design, Develop and Implement a Program in C for the following operationson Strings
  - a. Read a main String (STR), a Pattern String (PAT) and a Replace String (REP)
  - b. Perform Pattern Matching Operation: Find and Replace all occurrences of **PAT** in **STR** with **REP** if **PAT** exists in **STR**. Report suitable messages in case **PAT** does not exist in **STR**

Support the program with functions for each of the above operations. Don't use Built-in functions.

- 3. Design, Develop and Implement a menu driven Program in C for the following operations on **STACK** of Integers (Array Implementation of Stack with maximum size **MAX**)
  - a. *Push* an Element on to Stack
  - b. *Pop* an Element from Stack
  - c. Demonstrate how Stack can be used to check *Palindrome*
  - d. Demonstrate *Overflow* and *Underflow* situations on Stack
  - e. Display the status of Stack
  - f. Exit

Support the program with appropriate functions for each of the above operations

- 4. Design, Develop and Implement a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized expressions with the operators: +, -, \*, /, %(Remainder), ^(Power) and alphanumeric operands.
- 5. Design, Develop and Implement a Program in C for the following Stack Applications
  - a. Evaluation of **Suffix expression** with single digit operands and operators: +, -, \*,  $/, \frac{9}{0}, ^{\wedge}$
  - b. Solving Tower of Hanoi problem with n disks

| 6.  | Design, Develop and Implement a menu driven Program in C for the following operations on <b>Circular QUEUE</b> of Characters (Array Implementation of Queue with maximum size <b>MAX</b> )    |
|-----|---|
|     | a. Insert an Element on to Circular QUEUE   |
|     | b. Delete an Element from Circular QUEUE  |
|     | c. Demonstrate <i>Overflow</i> and <i>Underflow</i> situations on Circular QUEUE  |
|     | d. Display the status of Circular QUEUE   |
|     | e. Exit   |
|     | Support the program with appropriate functions for each of the above operations   |
|     |   |
|     |   |
| 7.  | Design, Develop and Implement a menu driven Program in C for the following operations on <b>Singly Linked List (SLL)</b> of Student Data with the fields: <i>USN, Name, Branch, Sem, PhNo</i> |
|     | a. Create a <b>SLL</b> of <b>N</b> Students Data by using <i>front insertion</i> .  |
|     | b. Display the status of <b>SLL</b> and count the number of nodes in it   |
|     | c. Perform Insertion / Deletion at End of <b>SLL</b>  |
|     | d. Perform Insertion / Deletion at Front of SLL(Demonstration of stack)   |
|     | e. Exit   |
| 8.  | Design, Develop and Implement a menu driven Program in C for the following operations on <b>Doubly Linked List (DLL)</b> of Employee Data with the fields: <i>SSN, Name, Dept,</i>            |
|     | Designation, Sal, PhNo  |
|     | a. Create a <b>DLL</b> of <b>N</b> Employees Data by using <i>end insertion</i> .   |
|     | b. Display the status of <b>DLL</b> and count the number of nodes in it   |
|     | c. Perform Insertion and Deletion at End of <b>DLL</b>  |
|     | d. Perform Insertion and Deletion at Front of <b>DLL</b>  |
|     | e. Demonstrate how this <b>DLL</b> can be used as <b>Double Ended Queue</b>   |
|     | f. Exit   |
| 9.  | Design, Develop and Implement a Program in C for the following operationson <b>Singly</b><br><b>Circular Linked List (SCLL)</b> with header nodes   |
|     | a. Represent and Evaluate a Polynomial $P(x,y,z) = 6x^2y^2z-4yz^5+3x^3yz+2xy^5z-2xyz^3$   |
|     | b. Find the sum of two polynomials <b>POLY1(x,y,z)</b> and <b>POLY2(x,y,z)</b> and store the  |
|     | result in <b>POLYSUM(x,y,z)</b>   |
| 10  | Support the program with appropriate functions for each of the above operations   |
| 10. | Design, Develop and Implement a menu driven Program in C for the following operations on <b>Binary Search Tree (BST)</b> of Integers  |
|     | a. Create a BST of <b>N</b> Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2   |
|     | b. Traverse the BST in Inorder, Preorder and Post Order   |
|     | c. Search the BST for a given element (KEY) and report the appropriate message  |
|     | e. Exit   |
| 11. | Design, Develop and Implement a Program in C for the following operations on $Graph(G)$ of Cities   |
|     | a. Create a Graph of N cities using Adjacency Matrix.   |
|     | b. Print all the nodes <b>reachable</b> from a given starting node in a digraph using DFS/ <b>BFS</b> method  |

12. Given a File of N employee records with a set K of Keys(4-digit) which uniquely determine the records in file F. Assume that file F is maintained in memory by a Hash Table(HT) of m memory locations with L as the set of memory addresses (2-digit) of locations in HT. Let the keys in K and addresses in L are Integers. Design and develop a Program in C that uses Hash function H:  $K \rightarrow L$  as H(K)=K mod m (remainder method), and implement hashing technique to map a given key K to the address space L. Resolve the collision (if any) using linear probing.

#### **Course outcomes:**

On the completion of this laboratory course, the students will be able to:

- Analyze and Compare various linear and non-linear data structures
- Demonstrate the working nature of different types of data structures and their applications
- Develop, analyze and evaluate the searching and sorting algorithms
- Choose the appropriate data structure for solving real world problems

#### **Conduction of Practical Examination:**

- 1. All laboratory experiments (**TWELVE** nos) are to be included for practical examination.
- 2. Students are allowed to pick one experiment from the lot.
- 3. Strictly follow the instructions as printed on the cover page of answer script
- 4. Marks distribution: Procedure + Conduction + Viva:15 + 70 + 15 (100)
- 5. Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.

conformal and Bilinear transformation arising in field theory and signal processing.

- Develop probability distribution of discrete, continuous random variables and joint probability distribution occurring in digital signal processing, information theory and design engineering.
- Demonstrate testing of hypothesis of sampling distributions and illustrate examples of Markov chains related to discrete parameter stochastic process.

#### Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

|        | and-conquer method works along with its time complexity analysis: worst case, average case and best case.  |
|--------|--|
| 6      | Implement in Java, the <b>0/1 Knapsack</b> problem using (a) Dynamic Programming method (b) Greedy method.   |
| 7      | From a given vertex in a weighted connected graph, find shortest paths to other vertices using <b>Dijkstra's algorithm</b> . Write the program in Java.  |
| 8      | Find Minimum Cost Spanning Tree of a given connected undirected graph using <b>Kruskal'salgorithm.</b> Use Union-Find algorithms in your program.  |
| 9      | Find Minimum Cost Spanning Tree of a given connected undirected graph using <b>Prim's algorithm</b> .  |
| 10     | <ul> <li>Write Java programs to</li> <li>(a) Implement All-Pairs Shortest Paths problem using Floyd's algorithm.</li> <li>(b) Implement Travelling Sales Person problem using Dynamic programming.</li> </ul>  |
| 11     | Design and implement in Java to find a <b>subset</b> of a given set $S = \{S_1, S_2,,S_n\}$ of <i>n</i> positive integers whose SUM is equal to a given positive integer <i>d</i> . For example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$ , there are two solutions $\{1,2,6\}$ and $\{1,8\}$ . Display a suitable message, if the given problem instance doesn't have a solution. |
| 12     | Design and implement in Java to find all <b>Hamiltonian Cycles</b> in a connected undirected Graph G of <i>n</i> vertices using backtracking principle.  |
| Cours  | se Outcomes: The students should be able to:   |
| •      |  |
| •      | <ul> <li>level language.</li> <li>Analyze and compare the performance of algorithms using language features.</li> <li>Apply and implement learned algorithm design techniques and data structuresto solve real-world problems.</li> </ul>  |
|        | uction of Practical Examination:   |
|        | aboratory experiments (Twelve problems) are to be included for practical<br>nination. Students are allowed to pick one experiment from the lot.  |
|        | enerate the data set use random number generator function.   |

#### HARDWARE PROGRAMS: PART B

- 8. a. Design and develop an assembly program to demonstrate BCD Up-Down Counter (00-99) on the Logic Controller Interface.
  b. Design and develop an assembly program to read the status of two 8-bit inputs (X & Y) from the Logic Controller Interface and display X\*Y.
- 9. Design and develop an assembly program to display messages "FIRE" and "HELP" alternately with flickering effects on a 7-segment display interface for a suitable period of time. Ensure a flashing rate that makes it easy to read both the messages (Examiner does not specify these delay values nor is it necessary for the student to compute these values).
- 10. Design and develop an assembly program to drive a Stepper Motor interface and rotate the motor in specified direction (clockwise or counter-clockwise) by N steps (Direction and N are specified by the examiner). Introduce suitable delay between successive steps. (Any arbitrary value for the delay may be assumed by the student).
- 11. Design and develop an assembly language program to
  - a. Generate the Sine Wave using DAC interface (The output of the DAC is to be displayed on the CRO).
  - b. Generate a Half Rectified Sine waveform using the DAC interface. (The output of the DAC is to be displayed on the CRO).
- 12. To interface LCD with ARM processor-- ARM7TDMI/LPC2148. Write and execute programs in C language for displaying text messages and numbers on LCD
- 13. To interface Stepper motor with ARM processor-- ARM7TDMI/LPC2148. Write a program to rotate stepper motor

#### **Study Experiments:**

- 1. Interfacing of temperature sensor with ARM freedom board (or any other ARM microprocessor board) and display temperature on LCD
- 2. To design ARM cortex based automatic number plate recognition system
- 3. To design ARM based power saving system

Course Outcomes: After studying this course, students will be able to

- Summarize 80x86 instruction sets and comprehend the knowledge of how assembly language works.
- Design and develop assembly programs using 80x86 assembly language instructions
- Infer functioning of hardware devices and interfacing them to x86 family
- Choose processors for various kinds of applications.

#### Conduction of Practical Examination:

- All laboratory experiments (all 7 + 6 nos) are to be included for practical examination.
- Students are allowed to pick one experiment from each of the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A: Procedure + Conduction + Viva: **08** + **35** +**07** (**50**)
- PART –B: Procedure + Conduction + Viva: **08** + **35** +**07** (**50**)
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

- Explain how to translate between different models of Computation (e.g., Deterministic and Non-deterministic and Software models).
- Interpret Grammars and Automata (recognizers) for different language classes and become knowledgeable about restricted models of Computation (Regular, Context Free) and their relative powers.
- Develop skills in formal reasoning and reduction of a problem to a formal model, with an emphasis on semantic precision and conciseness.
- Classify a problem with respect to different models of Computation.

### Question paper pattern:

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

- Describe the concepts of object-oriented and basic class modelling.
- Draw class diagrams, sequence diagrams and interaction diagrams to solve problems.
- Choose and apply a befitting design pattern for the given problem.

### Question paper pattern:

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

Regression Testing: Overview, System testing, Acceptance testing, Usability, Regression testing, Regression test selection techniques, Test case prioritization and selective execution. **Levels of Testing, Integration Testing:** Traditional view of testing levels, Alternative life-cycle models, The SATM system, Separating integration and system testing, A closer look at the SATM system, Decomposition-based, call graph-based, Path-based integrations.

# T2: Chapter 21 & 22, T1 : Chapter 12 & 13

**Course outcomes:** The students should be able to:

- Identify test cases for any given problem.
- Compare the different testing techniques.
- Classify the problems according to a suitable testing model.
- Apply the appropriate technique for the design of flow graph.
- Create appropriate document for the software artefact.

### Question paper pattern:

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

Text book 1: Ch 12.1,12.2, Ch 13, Ch 15

Course outcomes: The students should be able to:

- Explain the object-oriented concepts and JAVA.
- Develop computer programs to solve real world problems in Java.
- Develop simple GUI interfaces for a computer program to interact with users

### **Question paper pattern:**

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

| Course outcomes: The students shou  | ld be able to  |   |  |                   |  |
| Distinguish the characteristics   |  | omnuter exeteme   |  |                   |  |
|   | or embedded C  | omputer systems.  |  |                   |  |

- Identify the various vulnerabilities of embedded computer systems.
- Design and develop modules using RTOS.
- Explain RPC, threads and tasks

### **Question paper pattern:**

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

| BOOK_LENDING(Book_i   |                        | <b>-</b>                             | Date)            |  |  |  |
| LIBRARY_BRANCH(Bran   |                        |                                      | ,                |  |  |  |
| Write SQL queries to  |                        | , ,                                  |                  |  |  |  |
| 1. Retrieve details of a  | ll books in the librar | y – id, title, name of p             | ublisher,        |  |  |  |
| authors, number of o  |                        | -                                    | ,                |  |  |  |
| 2. Get the particulars of   | -                      |                                      | n 3 books, but   |  |  |  |
| from Jan 2017 to Ju   |                        |                                      | ,                |  |  |  |
| 3. Delete a book in BC  | OK table. Update th    | e contents of other tab              | oles to reflect  |  |  |  |
| this data manipulation  |                        |                                      |                  |  |  |  |
| 4. Partition the BOOK   | table based on year    | of publication. Demor                | strate its       |  |  |  |
| working with a simp   |                        |                                      |                  |  |  |  |
| <b>5.</b> Create a view of all  |                        | er of copies that are cu             | rrently          |  |  |  |
| available in the Libr   |                        |                                      |                  |  |  |  |
| 2 Consider the following sche   | ema for Order Datab    | ase:                                 |                  |  |  |  |
| SALESMAN(Salesman_id,   |                        |                                      |                  |  |  |  |
| CUSTOMER(Customer_id  | Cust_Name, City, C     | Grade, Salesman_id)                  |                  |  |  |  |
| ORDERS(Ord_No, Purchas  | e_Amt, Ord_Date, O     | Customer_id, Salesma                 | n_id)            |  |  |  |
| Write SQL queries to  |                        |                                      |                  |  |  |  |
| 1. Count the customers  | 6                      | 6                                    |                  |  |  |  |
| 2. Find the name and n  | umbers of all salesm   | nan who had more than                | n one customer.  |  |  |  |
| 3. List all the salesmar  | and indicate those     | who have and don't h                 | ave customers in |  |  |  |
| their cities (Use UN  | ION operation.)        |                                      |                  |  |  |  |
| 4. Create a view that t   | finds the salesman v   | who has the customer                 | with the highest |  |  |  |
| order of a day.   |                        |                                      |                  |  |  |  |

|   | 5. Demonstrate the DELETE operation by removing salesman with id 1000. All   |
|---|--|
|   | his orders must also be deleted.   |
| 3 | Consider the schema for Movie Database:  |
| 3 | ACTOR( <u>Act_id</u> , Act_Name, Act_Gender)   |
|   |  |
|   | DIRECTOR( <u>Dir_id</u> , Dir_Name, Dir_Phone)   |
|   | MOVIES( <u>Mov_id</u> , Mov_Title, Mov_Year, Mov_Lang, Dir_id)   |
|   | MOVIE_CAST( <u>Act_id</u> , <u>Mov_id</u> , Role)  |
|   | RATING( <u>Mov_id</u> , Rev_Stars)   |
|   | Write SQL queries to   |
|   | <ol> <li>List the titles of all movies directed by 'Hitchcock'.</li> <li>Find the manifestimate relevant of the second s</li></ol> |
|   | <ol> <li>Find the movie names where one or more actors acted in two or more movies.</li> <li>List all actors who acted in a movie before 2000 and also in a movie after</li> </ol>   |
|   |  |
|   | 2015 (use JOIN operation).   |
|   | 4. Find the title of movies and number of stars for each movie that has at least   |
|   | one rating and find the highest number of stars that movie received. Sort the  |
|   | result by movie title.   |
| 4 | 5. Update rating of all movies directed by 'Steven Spielberg' to 5.  |
| 4 | Consider the schema for College Database:  |
|   | STUDENT( <u>USN</u> , SName, Address, Phone, Gender)   |
|   | SEMSEC( <u>SSID</u> , Sem, Sec)  |
|   | CLASS( <u>USN</u> , SSID)<br>SUBJECT(Subanda Title Som Cradita)  |
|   | SUBJECT( <u>Subcode</u> , Title, Sem, Credits)   |
|   | IAMARKS( <u>USN</u> , <u>Subcode</u> , <u>SSID</u> , Test1, Test2, Test3, FinalIA)   |
|   | <ul><li>Write SQL queries to</li><li>1. List all the student details studying in fourth semester 'C' section.</li></ul>  |
|   | <ol> <li>Compute the total number of male and female students in each semester and in</li> </ol>   |
|   | each section.  |
|   | <ol> <li>Create a view of Test1 marks of student USN '1BI17CS101' in all subjects.</li> </ol>  |
|   | <ol> <li>Calculate the FinalIA (average of best two test marks) and update the</li> </ol>  |
|   | corresponding table for all students.  |
|   | <ol> <li>Categorize students based on the following criterion:</li> </ol>  |
|   | If FinalIA = $17 \text{ to } 20 \text{ then CAT} = 'Outstanding'$  |
|   | If FinalIA = 12 to 16 then $CAT = 'Average'$   |
|   | If FinalIA < 12 then $CAT = 'Weak'$  |
|   | Give these details only for 8 <sup>th</sup> semester A, B, and C section students.   |
| 5 | Consider the schema for Company Database:  |
| - | EMPLOYEE( <u>SSN</u> , Name, Address, Sex, Salary, SuperSSN, DNo)  |
|   | DEPARTMENT(DNo, DName, MgrSSN, MgrStartDate)   |
|   | DLOCATION(DNo,DLoc)  |
|   | PROJECT(PNo, PName, PLocation, DNo)  |
|   | WORKS_ON( <u>SSN</u> , <u>PNo</u> , Hours)   |
|   | Write SQL queries to   |
|   | 1. Make a list of all project numbers for projects that involve an employee  |
|   | whose last name is 'Scott', either as a worker or as a manager of the  |
|   | department that controls the project.  |
|   | 2. Show the resulting salaries if every employee working on the 'IoT' project is   |
|   | given a 10 percent raise.  |
|   | 3. Find the sum of the salaries of all employees of the 'Accounts' department, as  |
|   | well as the maximum salary, the minimum salary, and the average salary in  |
| 1 | this department  |

| 4. Retrieve the name of each employee who works on all the projects                    |
|--|
| controlledby department number 5 (use NOT EXISTS operator).                            |
| 5. For each department that has more than five employees, retrieve the                 |
| department number and the number of its employees who are making more                  |
| than Rs. 6,00,000.   |
| Part B: Mini project   |
| • For any problem selected, write the ER Diagram, apply ER-mapping rules,              |
| normalize the relations, and follow the application development process.               |
| • Make sure that the application should have five or more tables, at least one         |
| trigger and one stored procedure, using suitable frontend tool.                        |
| • Indicative areas include; health care, education, industry, transport, supply chain, |
| etc.   |
| Course outcomes: The students should be able to:                                       |
| • Use Structured Query Language (SQL) for database Creation and manipulation.          |
| • Demonstrate the working of different concepts of DBMS                                |
| • Implement and test the project developed for an application.                         |
| Conduction of Practical Examination:   |
| 1. All laboratory experiments from part A are to be included for practical             |
| examination.   |
| 2. Mini project has to be evaluated for 40 Marks.                                      |
| 3. Report should be prepared in a standard format prescribed for project work.         |
| 4. Students are allowed to pick one experiment from the lot.                           |
| 5. Strictly follow the instructions as printed on the cover page of answer script.     |
| 6. Marks distribution:   |
| a) Part A: Procedure + Conduction + Viva: 09 + 42 +09 =60 Marks                        |
| 7. Part B: Demonstration + Report + Viva voce = $20+14+06 = 40$ Marks                  |
| 8. Change of experiment is allowed only once and marks allotted to the procedure       |
| part to be made zero.  |
|  |

• Understand the cyber security and need cyber Law

## **Question paper pattern:**

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

## **Text Books:**

 Cryptography, Network Security and Cyber Laws – Bernard Menezes, Cengage Learning, 2010 edition (Chapters-1,3,4,5,6,7,8,9,10,11,12,13,14,15,19(19.1-19.5),21(21.1-21.2),22(22.1-22.4),25

- Cryptography and Network Security- Behrouz A Forouzan, DebdeepMukhopadhyay, Mc-GrawHill, 3<sup>rd</sup> Edition, 2015
- 2. Cryptography and Network Security- William Stallings, Pearson Education, 7<sup>th</sup> Edition
- 3. Cyber Law simplified- VivekSood, Mc-GrawHill, 11<sup>th</sup> reprint, 2013
- 4. Cyber security and Cyber Laws, Alfred Basta, Nadine Basta, Mary brown, ravindrakumar, Cengage learning

Inter-process communication.

**Course outcomes:** The students should be able to:

- Demonstrate need for OS and different types of OS
- Discuss suitable techniques for management of different resources
- Illustrate processor, memory, storage and file system commands
- Explain the different concepts of OS in platform of usage through case studies

## **Question paper pattern:**

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

- Understand the various mobile communication systems.
- Describe various multiplexing systems used in mobile computing.
- Explain the use and importance of data synchronization in mobile computing

#### **Question paper pattern:**

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

| <b>Description (If any):</b>  |                           |                           |                           |
| Exercises to be prepared with minin   | num three files (V        | Where ever necessary):    |                           |
| i. Header file.   |                           |                           |                           |
| ii. Implementation f  | ïle.                      |                           |                           |
| iii. Application file w   | where main function       | on will be present.       |                           |
| The idea behind using three files is  | to differentiate b        | between the developer     | and user sides. In        |
| the developer side, all the three files   | s could be made           | visible. For the user sid | de only header file       |
| and application files could be ma   | ade visible, whi          | ch means that the o       | bject code of the         |
| implementation file could be given  | to the user alon          | g with the interface g    | iven in the header        |
| file, hiding the source file, if require  | ed. Avoid I/O ope         | erations (printf/scanf)   | and use <i>data input</i> |
| <i>file</i> where ever it is possible   | I                         | ч <i>/</i>                | 1                         |
| Lab Experiments:  |                           |                           |                           |
| 1.  |                           |                           |                           |
| a) Write a LEX program to a<br>expression could be only<br>identifiers & operators pres | integers and op           | perators could be +       |                           |
| b) Write YACC program to ev<br>*, and /   | valuate <i>arithmetic</i> | c expression involving    | g operators: +, -         |
| 2. Develop, Implement and Ex ending with <i>b</i> preceded by <i>n</i>                  |                           | •                         | • •                       |

- 3. Design, develop and implement YACC/C program to construct *Predictive / LL(1) Parsing Table* for the grammar rules: A →aBa, B →bB / ɛ. Use this table to parse the sentence: abba\$
- 4. Design, develop and implement YACC/C program to demonstrate *Shift Reduce Parsing* techniquefor the grammar rules:  $E \rightarrow E+T / T$ ,  $T \rightarrow T^*F / F$ ,  $F \rightarrow (E) / id$  and parse the sentence: id + id \* id.
- 5. Design, develop and implement a C/Java program to generate the machine code using *Triples* for the statement A = -B \* (C + D) whose intermediate code in three-address form:

$$T1 = -B$$
$$T2 = C + D$$
$$T3 = T1 + T2$$
$$A = T3$$

6. a) Write a LEX program to eliminate *comment lines* in a *C* program and copy the

resulting program into a separate file.

b) Write YACC program to recognize valid *identifier, operators and keywords* in the given text (*C program*) file.

- 7. Design, develop and implement a C/C++/Java program to simulate the working of Shortest remaining time and Round Robin (RR) scheduling algorithms. Experiment with different quantum sizes for RR algorithm.
- 8. Design, develop and implement a C/C++/Java program to implement Banker's algorithm. Assume suitable input required to demonstrate the results.
- 9. Design, develop and implement a C/C++/Java program to implement page replacement algorithms LRU and FIFO. Assume suitable input required to demonstrate the results.

**Study Experiment / Project:** 

#### NIL

**Course outcomes:** The students should be able to:

- Implement and demonstrate Lexer's and Parser's
- Implement different algorithms required for management, scheduling, allocation and communication used in operating system.

## **Conduction of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script
- Marks distribution: Procedure + Conduction + Viva:15 + 70 + 15 (100)
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero

#### **Question paper pattern:**

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

- Understand the concepts of parallel computing and hardware technologies
- Illustrate and contrast the parallel architectures
- Recall parallel programming concepts

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

**Course outcomes:** The students should be able to:

- Analyze the natural language text.
- Define the importance of natural language.
- Understand the concepts Text mining.
- Illustrate information retrieval techniques.

# **Question paper pattern:**

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Cloud service management activities

**Course outcomes:** The students should be able to:

- Identify key challenges in managing information and analyze different storage networking technologies and virtualization
- Explain components and the implementation of NAS
- Describe CAS architecture and types of archives and forms of virtualization
- Illustrate the storage infrastructure and management activities

## **Question paper pattern:**

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

| NIL   |   |                         |                      |  |  |  |
| Course outcomes: The students shou  | ld be able to:                                    |                         |                      |  |  |  |
| 1. Understand the implementation  | n procedures fo                                   | or the machine learning | algorithms.          |  |  |  |

- 2. Design Java/Python programs for various Learning algorithms.
- 3. Apply appropriate data sets to the Machine Learning algorithms.
- 4. Identify and apply Machine Learning algorithms to solve real world problems.

# **Conduction of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script
- Marks distribution: Procedure + Conduction + Viva:15 + 70 + 15 (100)

Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.

- Appraise the role of IoT protocols for efficient network communication.
- Elaborate the need for Data Analytics and Security in IoT.
- Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

| Performance Statistics; Event Correlation Techniques - Rule-Based Reasoning,             |
| Model-Based Reasoning, CaseBased Reasoning, Codebook correlation Model,                  |
| State Transition Graph Model, Finite State Machine Model, Security                       |
| Management – Policies and Procedures, Security Breaches and the Resources                |
| Needed to Prevent Them, Firewalls, Cryptography, Authentication and                      |
| Authorization, Client/Server Authentication Systems, Messages Transfer                   |
| Security, Protection of Networks from Virus Attacks, Accounting Management,              |
| Report Management, Policy- Based Management, Service Level Management.                   |
| <b>Course outcomes:</b> The students should be able to:                                  |
| • Analyze the issues and challenges pertaining to management of emerging network         |
| technologies such as wired/wireless networks and high-speed internets.                   |
| <ul> <li>Apply network management standards to manage practical networks</li> </ul>      |
| <ul> <li>Formulate possible approaches for managing OSI network model.</li> </ul>        |
|  |
| • Infer SNMP for managing the network  |
| • Infer RMON for monitoring the behavior of the network                                  |
| • Identify the various components of network and formulate the scheme for the            |
| managing them  |
| Question paper pattern:  |
| The question paper will have ten questions.  |
| There will be 2 questions from each module.  |
| Each question will have questions covering all the topics under a module.                |
| The students will have to answer 5 full questions, selecting one full question from each |
| module.  |

- Explain the system concept and apply functional modeling method to model the activities of a static system
- Describe the behavior of a dynamic system and create an analogous model for a dynamic system;
- Illustrate the operation of a dynamic system and make improvement according to the simulation results.

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

| Description (If any).   |           |            |    |  |  |

#### escription (II any):

With reference to the above subject, this is to inform that the following are the guidelines to be followed for the Internship Programme and the earlier circular as cited in ref (i) is hereby withdrawn:

1) As per the 150B.9 the Internship Programme duration is of Eight weeks. However it has been reduced to Four weeks and it should be carried out between (VI and VII Semester) Vacation and/or (VII and VIII Semester) Vacation.

2) The internship can be carried out in any Industry/R and D Organization/Research Institute/ Educational institute of repute.

3) The Institutions may also suggest the students to enrol for the Internshala platform for free internships as there is a MoU with the AICTE for the beneficial of the affiliated Institutions (https://internshala.com/)

4) The Examination of Internship will be carried out in line with the University Project Viva-voce examination.

5) (a) The Department/college shall nominate staff member/s to facilitate, guide and supervise students under internship. (b) The Internal Guide has to visit place of internship at least once during the student's internship.

6) The students shall report the progress of the internship to the guide in regular intervals and seek his/her advice.

7) After the completion of Internship, students shall submit a report with completion and attendance certificates to the Head of the Department with the approval of both internal and external guides.

8) The Examination of Internship will be carried out in line with the University Project Viva-voce examination.

9) There will be 50 marks for CIE (Seminar: 25, Internship report: 25) and 50 marks for Viva - Voce conducted during SEE. The minimum requirement of CIE marks shall be 50% of the maximum marks.

10) The internal guide shall award the marks for seminar and internship report after evaluation. He/she will also be the internal examiner for Viva – Voce conducted during SEE.

11) The external guide from the industry shall be an examiner for the viva voce on Internship. Viva-Voce on internship shall be conducted at the college and the date of Viva-Voce shall be fixed in consultation with the external Guide. The Examiners shall jointly award the Viva - Voce marks.

12) In case the external Guide expresses his inability to conduct viva voce, the Chief Superintendent of the institution shall appoint a senior faculty of the Department to conduct viva-voce along with the internal guide. The same shall be informed in writing to the concerned Chairperson, Board of Examiners (BOE).

13) The students are permitted to carry out the internship anywhere in India or abroad. The University will not provide any kind of financial assistance to any student for carrying out the Internship.

**Course outcomes:** The students should be able to:

- 1. Adapt easily to the industry environment
- 2. Take part in team work
- 3. Make use of modern tools
- 4. Decide upon project planning and financing.
- 5. Adapt ethical values.
- 6. Motivate for lifelong learning

|  | CREDITS – 06         |                        |                  |  |  |  |  |  |  |  |
| Description (If any):  |                      |                        |                  |  |  |  |  |  |  |  |
| Project: Carried out at the Inst   | itution or at an Ind | ustry.                 |                  |  |  |  |  |  |  |  |
| • Project work shall preferably  |                      | he strength of each    | batch shall not  |  |  |  |  |  |  |  |
| exceed maximum of four stude   | ents                 |                        |                  |  |  |  |  |  |  |  |
| Viva-voce examination in proj  | ect work shall be c  | conducted batch-wise   |                  |  |  |  |  |  |  |  |
| • For Project Phase –I and Project Phase –I and Projectively.  | ect seminar and Pr   | oject Phase –II, the ( | CIE shall be 100 |  |  |  |  |  |  |  |
| <ul> <li>The CIE marks in the case of projects in the final year shall be based on the evaluation at the end of VIII semester by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the project guide.</li> </ul> |                      |                        |                  |  |  |  |  |  |  |  |

• Minimum requirement of CIE marks for Project work shall be 50% of the maximum marks.

- Students failing to secure a minimum of 50% of the CIE marks in Project work shall not be eligible for the Project examination conducted by the University and they shall be considered as failed in that/those Course/s. However, they can appear for University examinations conducted in other Courses of the same semester and backlog Courses if any. Students after satisfying the prescribed minimum CIE marks in the Course/s when offered during subsequent semester shall appear for SEE.
- Improvement of CIE marks shall not be allowed in Project where the student has already secured the minimum required marks
- For a pass in a Project/Viva-voce examination, a student shall secure a minimum of 40% of the maximum marks prescribed for the University Examination. The Minimum Passing Grade in a Course is 'E'.
- The student who desires to reject the results of a semester shall reject performance in all the Courses of the semester, irrespective of whether the student has passed or failed in any Course. However, the rejection of performance of VIII semester project shall not be permitted

**Course outcomes:** The students should be able to:

- 1. Identify a issue and derive problem related to society, environment, economics, energy and technology
- 2. Formulate and Analyze the problem and determine the scope of the solution chosen
- 3. Determine , dissect, and estimate the parameters, required in the solution.
- 4. Evaluate the solution by considering the standard data / Objective function and by using appropriate performance metrics.
- 5. Compile the report and take part in present / publishing the finding in a reputed conference / publications
- 6. Attempt to obtain ownership of the solution / product developed.

1. Kannada/Constitution of India, Professional Ethics and Human Rights: 50 % of the programs of the Institution have to teach Kannada/Constitution of India, Professional Ethics and Human Rights in cycle based concept during III and IV semesters.

#### 2. Audit Course:

(i) \*All lateral entry students (except B.Sc candidates) have to register for Additional Mathematics – I, which is 03 contact hours per week.

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed, if:

• The candidate has no pre – requisite knowledge.

• The candidate has studied similar content course during previous semesters.

• The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied Professional elective(s). Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

\*\*\*Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed, if:

• The candidate has no pre – requisite knowledge.

• The candidate has studied similar content course during previous semesters.

• The syllabus content of the selected open elective is similar to that of Departmental core course(s) or to be studied as Professional elective(s).

. A similar course, under any category, is prescribed in the higher semesters.

Registration to open electives shall be documented under the guidance of Programme Coordinator and Adviser.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - III

# 17MAT31 ENGINEERING MATHEMATICS -III (Core Subject) (continued)

# **Course outcomes:**

At the end of the course the student will be able to:

- Know the use of periodic signals and Fourier series to analyze circuits and system communications.
- Explain the general linear system theory for continuous-time signals and digital signal processing using the Fourier Transform and z-transform.
- Employ appropriate numerical methods to solve algebraic and transcendental equations.
- Apply Green's Theorem, Divergence Theorem and Stokes' theorem in various applications in the field of electro-magnetic and gravitational fields and fluid flow problems.
- Determine the extremals of functional and solve the simple problems of the calculus of variations.

Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Life-Long Learning, Accomplishment of Complex Problems.

### **Question paper pattern:**

- The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.

#### • Each full question will have sub question covering all the topics under a module.

## **Course outcomes:**

At the end of the course the student will be able to:

- Understand the basic concepts, basic laws and methods of analysis of DC and AC networks.
- Reduce the complexity of network using source shifting, source transformation and network reduction using transformations.
- Solve complex electric circuits using network theorems.
- Discuss resonance in series and parallel circuits.
- Discus the importance of initial conditions and their evaluation.
- Synthesize typical waveforms using Laplace transformation.
- Solve unbalanced three phase systems.
- Evaluate the performance of two port networks

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem analysis.

## **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 20 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

#### **Course outcomes:**

At the end of the course the student will be able to:

- Predict the output response of clipper and clamper circuits.
- Design and compare biasing circuits for transistor amplifiers
- Explain the transistor switching.
- Explain the concept of feedback, its types and design of feedback circuits
- Design and analyze the power amplifier circuits and oscillators for different frequencies.
- Perform design and analysis of FET and MOSFET amplifiers in the common source mode with fixed bias. ■

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

## **Course outcomes:**

At the end of the course the student will be able to:

- Simplify switching equations generated from truth tables.
- Design combinational logic circuits; adders, Subtractors and comparators.
- Design synchronous sequential circuits; latches, flip-flops, binary counters and Mod 6 counters.
- Design Mealy and Moore synchronous sequential circuit models.
- Construct state diagrams for sequential circuits.
- Describe the structure of HDL module, operators, data types.
- Give Comparison between VHDL and Verilog.
- Understand the concept of data-flow description.

### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

20

• Evaluate the performance of synchronous generators from the test data.

20

• Assess the performance of synchronous generator connected to infinite bus.

Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.

# **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■

| Course outcomes:   |   |  |  |  |  |
| At the end of the course the student will be able to:  |   |  |  |  |  |
| • Design and test rectifier circuits with and without capacitor filters.   |   |  |  |  |  |
| - 1  |   |  |  |  |  |
| • Determine h-parameter models of transistor for all modes.  |   |  |  |  |  |
| • Design and test BJT and FET amplifier and oscillator circuits.   |   |  |  |  |  |
| Realize Boolean expressions, adders and subtractors using gates.   |   |  |  |  |  |
| Graduate Attributes (As per NBA)   |   |  |  |  |  |
| Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.  |   |  |  |  |  |
| Conduct of Practical Examination:  |   |  |  |  |  |
| 1. All laboratory experiments are to be included for practical examination.  |   |  |  |  |  |
| 2. Breakup of marks and the instructions printed on the cover page of answer script to be stri-  |   |  |  |  |  |
| examiners.   | ctly adhered by the   |  |  |  |  |
|  | ctly adhered by the   |  |  |  |  |

## **Course Objectives:**

The purpose of this course is to make students well conversant with numerical methods to solve ordinary differential equations, complex analysis, sampling theory and joint probability distribution and stochastic processes arising in science and engineering.■

| Module-1  |  | Teachin<br>Hours |
|---|--|------------------|
| degree, Taylor's s<br>Milne's and Adam<br><b>Revised Bloom's</b>                        | <b>bds:</b> Numerical solution of ordinary differential equations of first order and first eries method, modified Euler's method, Runge - Kutta method of fourth order.<br>ns-Bashforth predictor and corrector methods (No derivations of formulae). $\blacksquare$<br>$L_2$ - Understanding, $L_3$ - Applying.   | 10               |
| Taxonomy Level<br>Module-2  |  |                  |
| Kutta method and<br><b>Special Functio</b><br>equation leading to<br>orthogonality. Ser | <b>pds:</b> Numerical solution of second order ordinary differential equations, Runge-<br>Milne's method.<br><b>ns:</b> Series solution-Frobenious method. Series solution of Bessel's differential<br>to $J_n(x)$ -Bessel's function of first kind. Basic properties, recurrence relations and<br>ties solution of Legendre's differential equation leading to P <sub>n</sub> (x)-Legendre<br>rigue's formula, problems.  | 10               |
| Revised Bloom's<br>Taxonomy Level   | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.   |                  |
| Module-3  |  |                  |
| Analytic function<br>construction of ar<br>formula, Residue,<br><b>Transformations</b>  | <b>les:</b> Review of a function of a complex variable, limits, continuity, differentiability.<br>ns-Cauchy-Riemann equations in cartesian and polar forms. Properties and<br>halytic functions. Complex line integrals-Cauchy's theorem and Cauchy's integral<br>poles, Cauchy's Residue theorem (without proof) and problems.<br>: Conformal transformations, discussion of transformations:<br>$w = z + (1/z)(z \neq 0)$ and bilinear transformations-problems. | 10               |
| Revised Bloom's<br>Taxonomy Level   | $L_2$ – Understanding, $L_3$ – Applying $L_4$ – Analysing.   |                  |
| Module-4  |  |                  |
| functions. Binom<br>problems.<br>Joint probability                                      | <b>ributions:</b> Random variables (discrete and continuous), probability mass/density ial distribution, Poisson distribution. Exponential and normal distributions, <b>distribution:</b> Joint Probability distribution for two discrete random variables, iance, correlation coefficient. $\blacksquare$ $L_3$ – Applying.   | 10               |
| Module-5  |  |                  |
| C   | <b>y:</b> Sampling, Sampling distributions, standard error, test of hypothesis for means confidence limits for means, student's t-distribution, Chi-square distribution as   | 10               |

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - IV

## 17MAT41 ENGINEERING MATHEMATICS – IV (Core Subject) (continued)

#### **Course outcomes:**

- Use appropriate single step and multi-step numerical methods to solve first and second order ordinary differential equations arising in flow data design problems.
- Explain the idea of analyticity, potential fields residues and poles of complex potentials in field theory and electromagnetic theory.

• Employ Bessel's functions and Legendre's polynomials for tackling problems arising in continuum

mechanics, hydrodynamics and heat conduction.

- Describe random variables and probability distributions using rigorous statistical methods to analyze problems associated with optimization of digital circuits, information, coding theory and stability analysis of systems.
- Apply the knowledge of joint probability distributions and Markov chains in attempting engineering problems for feasible random events.

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Life-Long Learning, Accomplishment of Complex Problems.

#### **Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question consisting of 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

## **Course objectives:**

- Explain the arrangement and operation of hydroelectric, steam, diesel, gas turbine and nuclear power plants and working of major equipment in the plants.
- Classification of substation and explain the operation of different substation equipment.
- Explain the importance of grounding and different grounding methods used in practice.
- Explain the economics of power generation and importance of power factor.

| Module-1  |   | Teaching<br>Hours |
|---|---|-------------------|
| Mass curve, reserv<br>power plants, Se<br>Classification of th<br>to supply. Water<br>water turbines Go   | wer Plants: Hydrology, run off and stream flow, hydrograph, flow duration curve,<br>voir capacity, dam storage. Hydrological cycle, merits and demerits of hydroelectric<br>election of site. General arrangement of hydel plant, elements of the plant,<br>ne plants based on water flow regulation, water head and type of load the plant has<br>turbines – Pelton wheel, Francis, Kaplan and propeller turbines. Characteristic of<br>overning of turbines, selection of water turbines. Underground, small hydro and<br>ants. Choice of size and number of units, plant layout and auxiliaries. ■ | 10                |

# TRANSMISSION AND DISTRIBUTION (Core Subject) B.E., IV Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE43 | CIE Marks  | 40 |  |  |  |
|-------------------------------|--------|------------|----|--|--|--|
| Number of Lecture Hours/Week  | 04     | SEE Marks  | 60 |  |  |  |
| Total Number of Lecture Hours | 50     | Exam Hours | 03 |  |  |  |
| Credits - 04                  |        |            |    |  |  |  |

## **Course Objectives:**

• To understand the concepts of various methods of generation of power.

• To understand the importance of HVAC, EHVAC, UHVAC and HVDC transmission.

• To design insulators for a given voltage level.

• To calculate the parameters of the transmission line for different configurations and assess the performance of the line.

• To study underground cables for power transmission and evaluate different types of distribution systems.

| Module-1  | Teaching<br>Hours |
|---|-------------------|
| Introduction to power system: Structure of electric power system: generation, transmission and<br>distribution. Advantages of higher voltage transmission: HVAC, EHVAC, UHVAC and HVDC.<br>Interconnection. Feeders, distributors and service mains.Overhead transmission lines: A brief introduction to types of supporting structures and line<br>conductors-Conventional conductors; Aluminium Conductor steel reinforced (ACSR), All –<br>  | 10                |
| Module-2  |                   |
| <b>Line parameters:</b> Introduction to line parameters- resistance, inductance and capacitance.<br>Calculation of inductance of single phase and three phase lines with equilateral spacing, unsymmetrical spacing, double circuit and transposed lines. Inductance of composite – conductors, geometric mean radius (GMR) and geometric mean distance (GMD). Calculation of capacitance of single phase and three phase lines with equilateral spacing, unsymmetrical spacing, double circuit and transposed lines. Capacitance of composite – conductor, geometric mean radius (GMR) and geometric mean distance (GMD). Advantages of single circuit and double circuit lines. | 10                |
| Revised Bloom's<br>Taxonomy LevelL1 – Remembering, L2 – Understanding, L3 – Applying.   |                   |
| Module-3  |                   |
| Performance of transmission lines: Classification of lines – short, medium and long. Current and<br>voltage relations, line regulation and Ferranti effect in short length lines, medium length lines<br>considering Nominal T and nominal $\pi$ circuits, and long lines considering hyperbolic form equations.<br>Equivalent circuit of a long line. ABCD constants in all cases.Revised Bloom's<br>Taxonomy LevelL1 – Remembering, L2 – Understanding, L3 – Applying, L4 – Analysing.  | 10                |
| Module-4  |                   |
| <b>Corona:</b> Phenomena, disruptive and visual critical voltages, corona loss. Advantages and disadvantages of corona. Methods of reducing corona.   | 10                |

## B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER -IV

#### **ELECTRIC MOTORS (Core Subject)** B.E., IV Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme] Course Code 17EE44 CIE Marks 40 Number of Lecture Hours/Week 04 SEE Marks 60 Exam Hours Total Number of Lecture Hours 50 03 Credits - 04 **Course Objectives:** • To study the constructional features of Motors and select a suitable drive for specific application. • To study the constructional features of Three Phase and Single phase induction Motors. • To study different test to be conducted for the assessment of the performance characteristics of motors. • To study the speed control of motor by a different methods. • Explain the construction and operation of Synchronous motor and special motors. Teaching Module-1 Hours DC Motors: Classification, Back emf, Torque equation, and significance of back emf, 10 Characteristics of shunt, series & compound motors. Speed control of shunt, series and compound motors. Application of motors. DC motor starters - 3 point and 4 point. Losses and efficiency- Losses in DC motors, power flow diagram, efficiency, condition for maximum efficiency. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying. Taxonomy Level Module-2 Testing of dc motors: Direct & indirect methods of testing of DC motors-Brake test, Swinburne's 10 test, Retardation test, Hopkinson's test, Field's test, merits and demerits of tests. Three phase Induction motors: Review of concept and generation of rotating magnetic field, Principle of operation, construction, classification and types; squirrel-cage, slip-ring (No question shall be set from the review portion). Slip, Torque equation, torque-slip characteristic covering motoring, generating and braking regions of operation, Maximum torque, significance of slip. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. Taxonomy Level Module-3 Performance of three-phase Induction Motor: Phasor diagram of induction motor on no-load and 10 on load, equivalent circuit, losses, efficiency, No-load and blocked rotor tests. Performance of the motor from the circle diagram and equivalent circuit. Cogging and crawling. High torque rotors-double cage and deep rotor bars. Equivalent circuit and performance evaluation of double cage induction motor. Induction motor working as induction generator; standalone operation and grid connected operation. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. Taxonomy Level **Module-4** Starting and speed Control of Three-phase Induction Motors: Need for starter. Direct on line, 10 Star-Delta and autotransformer starting. Rotor resistance starting. Speed control by voltage, frequency, and rotor resistance methods Single-phase Induction Motor: Double revolving field theory and principle of operation. Construction and operation of split-phase, capacitor start, capacitor run, and shaded pole motors. Comparison of single phase motors and applications. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. Taxonomy Level Module-5 Synchronous motor: Principle of operation, phasor diagrams, torque and torque angle, Blondel 10 diagram, effect of change in load, effect of change in excitation, V and inverted V curves.

Synchronous condenser, hunting and damping. Methods of starting synchronous motors.

## 17EE44 ELECTRIC MOTORS (Core Subject) (continued)

Module-5 (continued)

**Other motors:** Construction and operation of Universal motor, AC servomotor, Linear induction motor and stepper motors.■

Revised Bloom's $L_1$  – Remembering,  $L_2$  – Understanding,  $L_3$  – Applying,  $L_4$  – Analysing.Taxonomy Level

#### **Course Outcomes:**

At the end of the course the student will be able to:

- Explain the constructional features of Motors and select a suitable drive for specific application.
- Analyze and assess the performance characteristics of DC motors by conducting suitable tests and control the speed by suitable method.
- Explain the constructional features of Three Phase and Single phase induction Motors and assess their performance.
- Control the speed of induction motor by a suitable method.
- Explain the operation of Synchronous motor and special motors.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems.

#### **Question paper pattern:**

- □ The question paper will have ten questions.
- □ Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- □ Each full question with sub questions will cover the contents under a module.
- $\Box$  Students will have to answer 5 full questions, selecting one full question from each module.

## ELECTRICAL AND ELECTRONIC MEASUREMENTS (Foundation Course) B.E., IV Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

## 17EE46 OPERATIONAL AMPLIFIERS AND LINEAR ICs (Foundation Course) (continued)

## **Course Outcomes:**

At the end of the course the student will be able to:

- Explain the basics of linear ICs.
- Design circuits using linear ICs.
- Demonstrate the application of Linear ICs.
- Use ICs in the electronic projects.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Design / development of solutions, Conduct investigations of complex Problems.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.■

| Course Outcomes:   |  |                        |                          |   |  |  |  |  |
| At the set of the second due to be the   |  |                        |                          |   |  |  |  |  |

At the end of the course the student will be able to:

• To conduct experiment to determine the characteristic parameters of OP-Amp

• To design test the OP-Amp as Amplifier, adder, subtractor, differentiator and integrator

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - IV

## 17EEL48 OP- AMP AND LINEAR ICS LABORATORY (continued)

## **Course Outcomes (continued):**

• To design test the OP-Amp as oscillators and filters

• Design and study of Linear IC's as multivibrator power supplies.

Graduate Attributes (As per NBA)

Engineering Knowledge, Individual and Team work, Communication.

## **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero.

# V SEMESTER DETAILED SYLLABUS

## MANAGEMENT AND ENTREPRENEURSHIP (Core Course) B.E., V Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE51 | CIE Marks  | 40 |  |
|-------------------------------|--------|------------|----|--|
| Number of Lecture Hours/Week  | 04     | SEE Marks  | 60 |  |
| Total Number of Lecture Hours | 50     | Exam Hours | 03 |  |
| Credits – 04                  |        |            |    |  |

#### **Course objectives:**

- To introduce the field of management, task of the manager, importance of planning and types of planning, staff recruitment and selection process.
- To discuss the ways in which work is allocation, structure of organizations, modes of communication and importance of managerial control in business.
- To explain need of coordination between the manager and staff, the social responsibility of business and leadership.
- Toexplaintheroleandimportanceoftheentrepreneurineconomicdevelopmentandtheconceptsof entrepreneurship.
- To explain various types of entrepreneurs and their functions, the myths of entrepreneurship and the factors required for capacity building for entrepreneurs
- To discuss theimportanceofSmallScaleIndustriesandtherelatedtermsandproblemsinvolved.
- To discuss methods for generatingnewbusinessideasandbusinessopportunitiesinIndiaandtheimportance of business plan.
- To introduce the concepts of project management and discuss capitol building process.
- To explain project feasibility study and project appraisal and discuss project financing
- To discuss about different institutions at state and central levels supporting business enterprises. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER – V

# 17EE52 MICROCONTROLLER (Core Course) (continued)

#### Module-5

|                        |  | Hours |
|------------------------|--|-------|
| Interfacing: LCD int   | erfacing, Keyboard interfacing.  | 10    |
| ADC, DAC and sens      | or interfacing: ADC 0808 interfacing to 8051, Serial ADC Max1112 ADC             |       |
| interfacing to 8051, D | AC interfacing, Sensor interfacing and signal conditioning.                      |       |
| Motor control: Relay   | <b>WY, PWM, DC and stepper motor:</b> Relays and opt isolators, stepper motor    |       |
| interfacing, DC motor  | interfacing and PWM.   |       |
| 8051 interfacing with  | <b>1 8255:</b> Programming the 8255, 8255 interfacing, C programming for 8255.■  |       |
| <b>Revised Bloom's</b> | $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. |       |
| Taxonomy Level         |  |       |

#### **Course outcomes:**

At the end of the course the student will be able to:

- Discuss the history of the 8051 and features of other 8051 family members and the internal architecture of the 8051.
- Explains the use of an 8051 assembler, the stack and the flag register, loop, jump, and call instructions.
- Discuss 8051 addressing modes, accessing data and I/O port programming, arithmetic, logic instructions, and programs.
- Develop 8051C programs for time delay, I/O operations, I/O bit manipulation, logic and arithmetic operations, data conversion and data serialization
- Discuss the hardware connection of the 8051 chip, its timers, serial data communication and its interfacing of 8051 to the RS232.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem analysis.

#### **Question paper pattern:**

- The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub question covering all the topics under a module.

Teaching

## POWER ELECTRONICS (Core Course) B.E., V Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE53 | CIE Marks  | 40 |  |
|-------------------------------|--------|------------|----|--|
| Number of Lecture Hours/Week  | 04     | SEE Marks  | 60 |  |
| Total Number of Lecture Hours | 50     | Exam Hours | 03 |  |
| Credits – 04                  |        |            |    |  |

#### **Course objectives:**

- To give an overview of applications power electronics, different types of power semiconductor devices, their switching characteristics.
- To explain power diode characteristics, types, their operation and the effects of power diodes on RL circuits.
- To explain the techniques for design and analysis of single phase diode rectifier circuits.
- To explain different power transistors, their steady state and switching characteristics and imitations.
- To explain different types of Thyristors, their gate characteristics and gate control requirements.
- To explain the design, analysis techniques, performance parameters and characteristics of controlled rectifiers, DC- DC, DC -AC converters and Voltage controllers. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER – V

## 17EE54 SIGNALS AND SYSTEMS (Core Subject) (continued)

## **Course outcomes:**

At the end of the course the student will be able to:

- Classify the signals and systems.
- Explain basic operations on signals and properties of systems.
- Use convolution in both continuous and discrete domain for the analysis of systems given the impulse response of a system.
- Evaluate response of a given linear time invariant system.
- Provide block diagram representation of a linear time invariant system.
- Apply continuous time Fourier transform representation to study signals and linear time invariant systems.
- Apply discrete time Fourier transform representation to study signals and linear time invariant systems.
   Use Z-transform and properties of Z transform for the analysis of discrete time systems.

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER –V

## 17EE551 INTRODUCTION TO NUCLEAR POWER (Professional Elective) (continued)

## **Course outcomes:**

At the end of the course the student will be able to:

- Explain the fission process in nuclear materials, basic components of nuclear reactors, types of nuclear reactors and their working.
- Discuss different types of coolants, their features, and cooling of reactors,
- Discuss loss of cooling accidents in different reactors.
- Discuss postulated severe accidents in reactors and cooling of reactor during removal of spent fuel.
- Discuss cooling and disposing the nuclear waste and prospect of fusion energy in the future.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Design/ Development of Solutions, The Engineer and Society, Environment and Sustainability, Ethics, Project Management and Finance.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

## ELECTRICAL ESTMATION AND COSTING (Professional Elective) B.E., V Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| CourseCode                    | 17EE553 | CIE Marks  | 40 |  |  |
|-------------------------------|---------|------------|----|--|--|
| Number of Lecture Hours/Week  | 03      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 40      | Exam Hours | 03 |  |  |
| Credits - 03                  |         |            |    |  |  |

## **Course objectives:**

- To discuss the purpose of estimation and costing.
- To discuss market survey, estimates, purchase enquiries, tenders, comparative statement and payment of bills and Indian electricity act and some of the rules.
- To discuss distribution of energy in a building, wiring and methods of wiring, cables used in internal wiring, wiring accessories, fittings and fuses.
- To discuss design of lighting points and its number, total load, sub-circuits, size of conductor.
- To discuss different types of service mains and estimation of power circuits.
- To discuss estimation of overhead transmission and distribution system and its components. To discuss main components of a substation, their graphical representation and preparation of single line diagram of a substation.

| Module-1   |   | Teaching<br>Hours |

|  |   | 1                 |  |  |

#### **Course outcomes:**

At the end of the course the student will be able to:

- Explain the purpose of estimation and costing.
- Discuss market survey, estimates, purchase enquiries, preparation of tenders, comparative statements and payment of bills.
- Discuss Indian Electricity act and Indian Electricity rules.
- Discuss distribution of energy in a building, wiring and methods of wiring, cables used in internal wiring, wiring accessories and fittings, fuses and types of fuses.
- Discuss design of lighting points and its number, total load, sub-circuits, size of conductor.
- Discuss types of service mainsand estimation of service mains and power circuits.
- Discuss estimation of overhead transmission and distribution system and its components.
- Discuss main components of a substation, preparation of single line diagram of a substation and earthing of a substation.

## Graduate Attributes (As per NBA)

## Engineering Knowledge,

## **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.

## RENEWABLE ENERGY RESOURCES( Open Elective ) B.E., V Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE563      | CIE Marks  | 40 |
|-------------------------------|--------------|------------|----|
| Number of Lecture Hours/Week  | 03           | SEE Marks  | 60 |
| Total Number of Lecture Hours | 40           | Exam Hours | 03 |
|                               | Credits - 03 |            |    |

#### **Course objectives:**

- To discuss causes of energy scarcity and its solution, energy resources and availability of renewable energy.
- To explain sun earth geometric relationship, Earth Sun Angles and their Relationships
- To discuss about solar energy reaching the Earth's surface and solar thermal energy applications.
- To discuss types of solar collectors, their configurations and their applications
- To explain the components of a solar cell system, equivalent circuit of a solar cell, its characteristics and applications.
- To discus benefits of hydrogen energy, production of hydrogen energy, storage its advantages and disadvantages.
- To discuss wind turbines, wind resources, site selection for wind turbine
- To discuss geothermal systems, their classification and geothermal based electric power generation
- To discuss waste recovery management systems, advantages and disadvantages
- To discuss biomass production, types of biomass gasifiers, properties of producer gas.
- To discuss biogas, its composition, production, benefits.
- To discuss tidal energy resources, energy availability, power generation.
- To explain motion in the sea wave, power associated with sea wave and energy availability and the devices for harnessing wave energy.
- To discuss principles of ocean thermal energy conversion and production of electricity.

| Module-1               |   | Teaching<br>Hours |

| Taxonomy Level  | $L_1$ – Remembering, $L_2$ – Onderstanding, $L_3$ – Apprying.  |                   |
| <ul> <li>Discuss causes of</li> <li>Discuss energy applications.</li> <li>Discuss types of applications.</li> <li>Discus generations.</li> <li>Discus generations.</li> <li>Discus product</li> </ul>   | The student will be able to:<br>of energy scarcity and its solution, energy resources and availability of renewable en-<br>from sun, energy reaching the Earth's surface and solar thermal energy<br>of solar collectors, their configurations, solar cell system, its characteristics and their<br>on of energy from hydrogen, wind, geothermal system, solid waste and agriculturent<br>ion of energy from biomass, biogas.<br>ergy resources, energy availability and power generation.   |                   |

• Discuss power generation sea wave energy and ocean thermal energy. ■

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.

## **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.

## MICROCONTROLLER LABORATORY - 1 B.E., V Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| s 60  |
|-------|
| rs 03 |
| l     |

## **Course objectives:**

• To explain writing assembly language programs for data transfer, arithmetic, Boolean and logical instructions.

- To explain writing assembly language programs for code conversions.
- To explain writing assembly language programs using subroutines for generation of delays, counters, configuration of SFRs for serial communication and timers.
- To perform interfacing of stepper motor and dc motor for controlling the speed.
- To explain generation of different waveforms using DAC interface. ■

| Sl.<br>NO |   | Experiments  |  |
|-----------|---|--|--|
| Note      | Note: For the experiments 1 to 6, 8051 assembly programming is to be used.  |  |  |
| 1         | Data transfer – Program for block data movement, sorting, exchanging, finding largest element in an array.  |  |  |
| 2         | Arithmetic instructions: Addition, subtraction, multiplication and division. Square and cube operations for 16 bit numbers.                                 |  |  |
| 3         | Counters  |  |  |
| 4         | Boolean and logical instructions (bit manipulation).  |  |  |
| 5         | Conditional call and return instructions.   |  |  |
| 6         | Code conversion programs – BCD to ASCII, ASCII to BCD, ASCII to decimal, Decimal to ASCII, Hexa decimal to and Decimal to Hexa.                             |  |  |
| 7         | Programs to   | generate delay, Programs using serial port and on-chip timer/counters.               |  |
| Note      | : Single chip s   | olution for interfacing 8051 is to be with C Programs for the following experiments. |  |
| 8         | Stepper motor interface.  |  |  |
| 9         | DC motor interface for direction and speed control using PWM.   |  |  |
| 10        | Alphanumerical LCD panel interface.   |  |  |
| 11        | Generate different waveforms: Sine, Square, Triangular, Ramp using DAC interface.   |  |  |
| 12        | External ADC and Temperature control interface.   |  |  |
| 13        | Elevator interface.   |  |  |
|           | Revised Bloom's<br>Taxonomy Level $L_1$ - Remembering, $L_2$ - Understanding, $L_3$ - Applying, $L_4$ - Analysing, $L_5$ - Evaluating,<br>$L_6$ - Creating. |  |  |
| Сош       | Course outcomes:  |  |  |

## **Course outcomes:**

At the end of the course the student will be able to:

- Write assembly language programs for data transfer, arithmetic, Boolean and logical instructions.
- Write ALP for code conversions.
- Write ALP using subroutines for generation of delays, counters, configuration of SFRs for serial communication and timers.
- Perform interfacing of stepper motor and dc motor for controlling the speed.

- Generate different waveforms using DAC interface.
- Work with a small team to carryout experiments using microcontroller concepts and prepare reports that present lab work.■

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Modern tool usage, Communication.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER -V

#### 17EEL57 MICROCONTROLLER LABORATORY - 1(continued)

#### **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■

**Learning beyond the syllabus:** To acquire a wide variety of skills and to develop society friendly applications mini projects can be practiced by referring to "Microcontroller Based Projects" Second Edition, An EFY (Electronics For You) Enterprise Pvt Ltd, 2013.

#### **Course outcomes:**

At the end of the course the student will be able to:

- Discuss the effects of feedback and types of feedback control systems.
- Evaluate the transfer function of a linear time invariant system.
- Evaluate the stability of linear time invariant systems.
- Apply block diagram manipulation and signal flow graph methods to obtain transfer function of systems.
- Demonstrate the knowledge of mathematical modeling of control systems and components
- Determine transient and steady state time response of a simple control system.
- Investigate the performance of a given system in time and frequency domains.
- Discuss stability analysis using Root locus, Bode plots and Nyquist plots.
- Determine the controller or compensator configuration and parameter values relative to how it is connected to the controlled process given the design specifications.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem analysis, Modern Tool Usage, Life-long Learning.

#### **Question paper pattern:**

- The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub question covering all the topics under a module.

## DIGITAL SIGNAL PROCESSING (Core Subject) B.E., VI Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE63 | CIE Marks  | 40 |  |  |
|-------------------------------|--------|------------|----|--|--|
| Number of Lecture Hours/Week  | 04     | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50     | Exam Hours | 03 |  |  |
| Credits - 04                  |        |            |    |  |  |

#### **Course objectives:**

- To define Discrete Fourier transform and its properties.
- To evaluate DFT of various signals using properties of DFT.
- To explain different linear filtering techniques.
- To explain the evaluation of DFT and inverse DFT using fast and efficient algorithms
- To discuss impulse invariant transformation, bilinear transformation techniques and their properties.
- To design infinite impulse response Butterworth digital filters using impulse invariant and bilinear transformation techniques.
- To design infinite impulse response Chebyshev digital filters using impulse invariant and bilinear transformation techniques.
- To discuss direct, cascade, parallel and ladder methods of realizing a digital IIR filter.
- To discuss window functions used for the design of FIR filters.
- To discuss windowing technique of designing FIR filter.
- To discuss frequency sampling technique of designing FIR filter.
- To discuss direct, cascade and linear phase form of realizing a digital FIR filter.

| To discuss direct, cascade and inical phase form of realizing a digital Fit met.   | -                 |
|--|-------------------|
| Module-1   | Teaching<br>Hours |
| <b>Discrete Fourier Transforms:</b> Definitions, properties-linearity, shift, symmetry Properties- circular convolution – periodic convolution, use of tabular arrays, circular arrays, Stock ham's method, linear convolution – two finite duration sequence, one finite & one infinite duration, overlap add and save methods.   | <u>10</u>         |
| Revised Bloom's $L_1$ - Remembering, $L_2$ - Understanding, $L_3$ - Applying, $L_4$ - Analysing.Taxonomy Level $L_5$ - Evaluating  |                   |
| Module-2   |                   |
| Fast Fourier Transforms Algorithms: Introduction, decimation in time algorithm, first<br>decomposition, number of computations, continuation of decomposition, number of multiplications,<br>computational efficiency, decimation in frequency algorithms, Inverse radix – 2 algorithms.Revised Bloom's $L_4$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing, | 10                |
| Taxonomy Level     L1     Evaluating       L5-     Evaluating  |                   |
| Module-3   |                   |
| <b>Design of IIR Digital Filters:</b> Introduction, impulse invariant transformation, bilinear transformations, All pole analog filters- Butterworth & Chebyshev filters, design of digital Butterworth filter by impulse invariant transformation and bilinear transformation, Frequency transformations.   | 10                |
| Revised Bloom'sL1- Remembering, L2 – Understanding, L3 – Applying. L4 – Analysing.Taxonomy LevelL5 – Evaluating  |                   |
| Module-4   |                   |
| <b>Design of IIR Digital Filters (Continued):</b> Design of digital Chebyshev –type 1filter by impulse invariant transformation and bilinear transformation, Frequency transformations.<br><b>Realization of IIR digital systems:</b> direct form, cascade form and parallel form, Ladder structures for equal degree polynomial.  | 10                |

| Revised Bloom's<br>Taxonomy Level | $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing, $L_5$ – Evaluating |  |
|-----------------------------------|---|--|
|                                   |   |  |

## COMPUTER AIDED ELECTRICAL DRAWING (PROFESSIONAL ELECTIVE) B.E., VI Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE651      | CIE Marks  | 40 |
|-------------------------------|--------------|------------|----|
| Number of Lecture Hours/Week  | 03           | SEE Marks  | 60 |
| Total Number of Lecture Hours | 40           | Exam Hours | 03 |
|                               | Credits - 03 |            |    |

#### **Course objectives:**

- To discuss the terminology of DC and AC armature windings.
- To discuss design and procedure to draw armature winding diagrams for DC and AC machines.
- To discuss the substation equipment, their location in a substation and development of a layout for substation.
- To discuss different sectional views of transformers, DC machine, its parts and alternator and its parts.
- To explain development of sectional views of Transformers, DC machine and alternators using the design data, sketches.

| Suitable CAD software can be used for drawings  |                                      |

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VI

#### 17EE651 COMPUTER AIDED ELECTRICAL DRAWING (Professional Elective) (continued)

**Course Outcomes:** At the end of the course the student will be able to:

- Discuss the terminology and types of DC and AC armature windings.
- Develop armature winding diagram for DC and AC machines
- Develop a layout for substation using the standard symbols for substation equipment. .
- Draw sectional views of core and shell types transformers using the design data
- Draw sectional views of assembled DC machine or its parts using the design data or the sketches.
- Draw sectional views of assembled alternator or its parts using the design data or the sketches.■

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.

#### **Question paper pattern:**

- The question paper will have two parts, PART A and PART B.
- Each part is for 40 marks.
- Part A is for Modules 1 and 2.
- Questions 1 and 2 of PART A will be only on DC windings or only on AC windings. Students have to answer any one of them. The marks prescribed is 25.
- Question 3 of PART A covering module 2 is compulsory. The marks prescribed is 15.
- Part B is for Modules 3, 4 and 5.
- Questions 4 and 5 will cover any two modules of modules 3, 4 and 5. Students have to answer any one of them. The marks prescribed is 40.■

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER – VI

## 17EE661 ARTIFICIAL NEURAL NETWORKS & FUZZY LOGIC (Open Elective) (continued)

#### **Course outcomes:**

At the end of the course the student will be able to:

- Show an understanding of Organization of the Brain, Biological and Artificial Neuron Models
- Show an understanding of Back propagation network architecture, Perceptron Model, Single layer Artificial Neural Network, Model for Multilayer Perceptron, Back propagation Learning,
- Show an understanding of Back propagation training and summary of Back propagation Algorithm
- Show an understanding Bidirectional Associative Memory (BAM) Architecture
- Show an understanding adaptive resonance theory architecture and its applications
- Differentiate between crisp logic, predicate logic and fuzzy logic.
- Explain fuzzy rule based system
- Show an understanding of Defuzzification methods. ■

#### Graduate Attributes (As per NBA)

Engineering Knowledge

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER – VI

## 17EE662 SENSORS AND TRANSDUCERS(Open Elective) (continued)

#### **Course outcomes:**

At the end of the course the student will be able to:

- Discuss need of transducers, their classification, advantages and disadvantages.
- Show an understanding of working of various transducers and sensors.
- Discuss recent trends in sensor technology and their selection.
- Discuss basics of signal conditioning and signal conditioning equipment.
- Discuss configuration of Data Acquisition System and data conversion.
- Show knowledge of data transmission and telemetry.
- Explain measurement of non-electrical quantities -temperature, flow, speed, force, torque, power and viscosity. ■

#### **Graduate Attributes (As per NBA)**

Engineering Knowledge

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

## BATTERIES AND FUEL CELLS FOR COMMERCIAL, MILITARY AND SPACE APPLICATIONS (Open Elective) B.E., VI Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17EE663 | CIE Marks  | 40 |  |
|-------------------------------|---------|------------|----|--|
| Number of Lecture Hours/Week  | 03      | SEE Marks  | 60 |  |
| Total Number of Lecture Hours | 40      | Exam Hours | 03 |  |
| Credits - 03                  |         |            |    |  |

### **Course objectives:**

- □ To discuss the current status of various rechargeable batteries and fuel cells for various applications.
- □ To discuss the performance capabilities and limitations of batteries and fuel cells.
- □ To discuss the performance requirements for next-generation high-power rechargeable lithium-based batteries and sealed nickel-cadmium and lead-acid batteries.
- □ To discuss fuel cells that are best suited for applications where electrical power requirements vary between several kilowatts (kW) to a few megawatts (MW)
- □ To describe the high-power batteries currently used by EVs and HEVs and various next-generation rechargeable batteries best suited for all-electric cars, EVs, and HEVs.
- □ To discuss low-power battery configurations that are best suited for compact commercial, industrial, and medical applications.
- To identify the design aspects and performance characteristics of micro- and nano-

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VI

| Module-5                          |   | Teaching<br>Hours |
|-----------------------------------|---|-------------------|
|                                   | ations:Drive Stiffness, Drive Resolution,Drive Acceleration,Drive Speed<br>Ratio Considerations,Drive Thrust/Torque And FrictionConsiderations, Drive | 08                |
| Revised Bloom's<br>Taxonomy Level | $L_1$ – Remembering, $L_2$ – Understanding.   |                   |

#### **Course outcomes:**

At the end of the course the student will be able to:

- Explain the evolution and classification of servos, with descriptions of servo drive actuators, amplifiers, feedback transducers, performance, and troubleshooting techniques.
- Discuss system analogs and vectors, with a review of differential equations.
- Discuss the concept of transfer functions for the representation of differential equations.
- Discuss mathematical equations for electric servo motors, both DC and brushless DC servo motors.
- Represent servo drive components by their transfer function, to combine the servo drive building blocks into system block diagrams.
- Determine the frequency response techniques for proper servo compensation.
- Explain perform indices and performance criteria for servo systems.
- Discuss the mechanical considerations of servo systems.

#### **Graduate Attributes (As per NBA)** Engineering Knowledge

## Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.

## CONTROL SYSTEM LABORATORY B.E., VI Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                       | 17EEL67  | CIE Marks  | 40 |
|-----------------------------------|--|------------|----|
| Number of Practical<br>Hours/Week | <b>03</b> =(1 Hour Instruction + 2 Hours Laboratory) | SEE Marks  | 60 |
| <b>RBT</b> levels                 | L1,L2,L3   | Exam Hours | 03 |
|                                   | Credits - 02   |            |    |

#### **Course objectives:**

- To determine the time and frequency domain reposes of a given second order system using software package or discrete components.
- To design and analyze Lead, Lag and Lag Lead compensators for given specifications.
- To draw the performance characteristics of ac and dc servomotors and synchro-transmitter receiver pair.
- To simulate the DC position and feedback control system to study the effect of P, PI, PD and PID controller and Lead compensator on the step response of the system.
- To write a script files to plot root locus, bode plot, Nyquist plots to study the stability of the system using a software package.

| Sl.<br>NO | Experiments   |
|-----------|---|
| 1         | Experiment to draw the speed torque characteristics of (i) AC servo motor (ii) DC servo motor             |
| 2         | Experiment to draw synchro pair characteristics   |
| 3         | Experiment to determine frequency response of a second order system                                       |
| 4         | (a) To design a passive RC lead compensating network for the given specifications, viz, the maximum       |
|           | phase lead and the frequency at which it occurs and to obtain the frequency response.                     |
|           | (b) To determine experimentally the transfer function of the lead compensating network.                   |
| 5         | (a) To design a passive RC lag compensating network for the given specifications, viz, the maximum phase  |
|           | lag and the frequency at which it occurs and to obtain the frequency response.                            |
|           | (b) To determine experimentally the transfer function of the lag compensating network                     |
| 6         | Experiment to draw the frequency response characteristics of the lag – lead compensator network and       |
|           | determination of its transfer function.   |
|           | Experiments 7 to 11 must be done using MATLAB/SCILAB only.  |
| 7         | (a) To simulate a typical second order system and determine step response and evaluate time               |
|           | response specifications.  |
|           | (b) To evaluate the effect of additional poles and zeros on time response of second order system.         |
|           | (c) To evaluate the effect of pole location on stability  |
|           | (d) To evaluate the effect of loop gain of a negative feedback system on stability.                       |
| 8         | To simulate a second order system and study the effect of (a) P, (b) PI, (c) PD and (d) PID controller on |
|           | the step response.  |
| 9         | (a) To simulate a D.C. Position control system and obtain its step response.                              |
|           | (b) To verify the effect of input waveform, loop gain and system type on steady state errors.             |
|           | (c) To perform trade-off study for lead compensator.  |
|           | (d) To design PI controller and study its effect on steady state error.                                   |
| 10        | (a) To examine the relationship between open-loop frequency response and stability, open-loop             |
|           | frequency and closed loop transient response  |
|           | (b) To study the effect of open loop gain on transient response of closed loop system using root          |
|           | locus.  |
| 11        | (a) To study the effect of open loop poles and zeros on root locus contour                                |

|        | (b) T       | b estimate the effect of open loop gain on the transient response of closed loop system using        |  |

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER -VI

#### 17EEL67 CONTROL SYSTEM LABORATORY(continued)

**Course outcomes:** At the end of the course the student will be able to:

- Use software package or discrete components in assessing the time and frequency domain reposes of a given second order system.
- Design and analyze Lead, Lag and Lag Lead compensators for given specifications.
- Determine the performance characteristics of ac and dc servomotors and synchro-transmitter receiver pair used in control systems.
- Simulate the DC position and feedback control system to study the effect of P, PI, PD and PID controller and Lead compensator on the step response of the system.
- Write a script files to plot root locus, bode plot, Nyquist plots to study the stability of the system using a software package.
- Work with a small team to carryout experiments and prepare reports that present lab work.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Modern tool usage, Communication.

## **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero.

## DIGITAL SIGNAL PROCESSING LABORATORY B.E., VI Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                       | 17EEL68                                      | CIE Marks  | 40 |
|-----------------------------------|--|------------|----|
| Number of Practical<br>Hours/Week | 03=(1 Hour Instruction + 2 Hours Laboratory) | SEE Marks  | 60 |
| RBT levels                        | L1,L2,L3                                     | Exam Hours | 03 |
|                                   | Credits - 02                                 |            |    |

#### **Course objectives:**

- To explain the use of MATLAB software in evaluating the DFT and IDFT of given sequence
- To verify the convolution property of the DFT
- To design and implementation of IIR and FIR filters for given frequency specifications.
- To realize IIR and FIR filters.
- To help the students in developing software skills.

| Sl. No               | Experiments   |  |  |
|----------------------|---|--|--|
| 1                    | ification of Sampling Theorem both in time and frequency domains  |  |  |
| 2                    | Evaluation of impulse response of a system  |  |  |
| 3                    | To perform linear convolution of given sequences  |  |  |
| 4                    | o perform circular convolution of given sequences using (a) the convolution summation formula (b) the matrix method and (c) Linear convolution from circular convolution with zero padding. |  |  |
| 5                    | Computation of N – point DFT and to plot the magnitude and phase spectrum.  |  |  |
| 6                    | Linear and circular convolution by DFT and IDFT method.   |  |  |
| 7                    | Solution of a given difference equation.  |  |  |
| 8                    | Calculation of DFT and IDFT by FFT  |  |  |
| 9                    | Design and implementation of IIR filters to meet given specification (Low pass, high pass, band pass<br>and band reject filters)  |  |  |
| 10                   | Design and implementation of FIR filters to meet given specification (Low pass, high pass, band pass<br>and band reject filters) using different window functions                           |  |  |
| 11                   | Design and implementation of FIR filters to meet given specification (Low pass, high pass, band pass<br>and band reject filters) using frequency sampling technique.                        |  |  |
| 12                   | Realization of IIR and FIR filters  |  |  |
|                      |   |  |  |
| Revised H<br>Taxonom |   |  |  |

**Course outcomes:** At the end of the course the student will be able to:

- Give physical interpretation of sampling theorem in time and frequency domains.
- Evaluate the impulse response of a system.
- Perform convolution of given sequences to evaluate the response of a system.
- Compute DFT and IDFT of a given sequence using the basic definition and/or fast methods.
- Provide a solution for a given difference equation.
- Design and implement IIR and FIR filters
- Conduct experiments using software and prepare reports that present lab work

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.

## **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■

# VII SEMESTER DETAILED SYLLABUS

## POWER SYSTEM ANALYSIS – 2(Core Course) B.E., VII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

## **Course outcomes:**

At the end of the course the student will be able to:

- Discuss performance of protective relays, components of protection scheme and relay terminology overcurrent protection.
- Explain the working of distance relays and the effects ofarc resistance, power swings, line length and source impedance on performance of distance relays.
- Discuss pilot protection; wire pilot relaying and carrier pilot relaying.
- Discuss construction, operating principles and performance of differential relays for differential protection.
- Discuss protection of generators, motors, Transformer and Bus Zone Protection.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Ethics, Communication, Lifelong Learning.

- The question paper will have ten full questions carrying equal marks.Each full question consisting of 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.

• Each full question will have sub question covering all the topics under a module.

Module-5 (continued)

**High Voltage Testing of Electrical Apparatus:** Testing of Insulators and Bushings, Testing of Isolators and Circuit Breakers, Testing of Cables, Testing of Transformers, Testing of Surge Arrestors, Radio Interference Measurements, Testing of HVDC Valves and Equipment. ■

 $\begin{array}{c|c} \textbf{Revised Bloom's} & L_1-\text{Remembering}, \ L_2-\text{Understanding}.\\ \hline \textbf{Taxonomy Level} & \end{array}$ 

#### **Course outcomes:**

At the end of the course the student will be able to:

- Explain conduction and breakdown phenomenon in gases, liquid dielectrics.
- Explain breakdown phenomenon in solid dielectrics.
- Explain generation of high voltages and currents
- Discuss measurement techniques for high voltages and currents.
- Discuss overvoltage phenomenon and insulation coordination in electric power systems.
- Discuss non-destructive testing of materials and electric apparatus and high-voltage testing of electric apparatus

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Modern Tool Usage, Ethics, Individual and Team Work, Communication, Life-long Learning.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module.

#### **Course objectives:**

□ To introduce state variable approach for linear time invariant systems in both the continuous and discrete time systems

- To explain development of state models for linear continuous time and discrete time systems
- □ To explain application of vector and matrix algebra to find the solution of state equations for linear continuous time and discrete time systems
- □ To define controllability and observability of a system and testing techniques for controllability and observability of a given system
- □ To explain design techniques of pole assignment and state observer using state feedback.
- To explain about inherent and intentional nonlinearities that can occur in control system and developing the describing function for the nonlinearities.
- □ To explain stability analysis of nonlinear systems using describing function analysis.
- □ To explain the analysis of nonlinear systems using Lyapunov function and design of Lyapunov function for stable systems.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VII

## 17EE741 ADVANCED CONTROL SYSTEMS(Professional Elective) (continued)

## **Course outcomes:**

At the end of the course the student will be able to:

- Discuss state variable approach for linear time invariant systems in both the continuous and discrete time systems.
- Develop of state models for linear continuous time and discrete time systems.
- Apply vector and matrix algebra to find the solution of state equations for linear continuous time and discrete time systems.
- Define controllability and observability of a system and test for controllability and observability of a given system.
- Design pole assignment and state observer using state feedback.
- Develop the describing function for the nonlinearity present to assess the stability of the system.
- Develop Lyapunov function for the stability analysis of nonlinear systems.

## Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of

complex problems, Modern Tool Usage, Ethics, Individual and Team Work, Life-long Learning.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VII

## 17EE753 SPACECRAFT POWER TECHNOLOGIES(Professional Elective)(continued)

#### **Course outcomes(continued):**

- Describe the elements of a space photovoltaic power system, the status of solar cell technologies presently in use.
- Discuss advances in both cell and array technology, and solar thermo photovoltaic energy conversion.
- Discusses, space-qualified components, the array of chemical storage technologies including both batteries and fuel cells.
- Describe components and techniques for achieving the various Power Management and Distribution functions and examples of several PMAD configurations.■

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of complex problems, Modern Tool Usage, Ethics, Individual and Team Work, Communication, Life-long Learning.

## Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VII

## 17EE754 INDUSTRIAL HEATING (Professional Elective) (continued)

#### **Course outcomes:**

At the end of the course the student will be able to:

- Explain construction, classification of industrial furnaces
- Discuss the methods of heat transfer in industrial furnaces.
- Discuss heating capacity of batch furnaces and continuous furnaces
- Discuss methods of saving energy in industrial furnace systems and fuel consumption calculation.
- Explain operation and control of industrial furnaces.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of complex problems.

## **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

#### **Course outcomes:**

At the end of the course the student will be able to:

- Develop a program in MATLAB to assess the performance of medium and long transmission lines.
- Develop a program in MATLAB to obtain the power angle characteristics of salient and non-salient pole alternator.
- Develop a program in MATLAB to assess the transient stability under three phase fault at different locations in a of radial power systems.
- Develop programs in MATLAB to formulate bus admittance and bus impedance matrices of interconnected power systems.
- Use Mi-Power package to solve power flow problem for simple power systems.
- Use Mi-Power package to study unsymmetrical faults at different locations in radial power systems
- Use of Mi-Power package to study optimal generation scheduling problems for thermal power plants. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VII

## 17EEL76POWER SYSTEM SIMULATION LABORATORY (continued)

Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.

**Conduct of Practical Examination:** 

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

3. Students can pick one experiment from the questions lot prepared by the examiners.

4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER -VII

## 17EEL77 RELAY AND HIGH VOLTAGE LABORATORY (continued)

## **Course outcomes:**

At the end of the course the student will be able to:

- Experimentally verify the characteristics of over current, over voltage, under voltage and negative sequence relays both electromagnetic and static type.
- Experimentally verify the characteristics of microprocessor based over current, over voltage, under voltage relays and distance relay.
- Show knowledge of protecting generator, motor and feeders.
- Analyze the spark over characteristics for both uniform and non-uniform configurations using High AC and DC voltages.
- Measure high AC and DC voltages and breakdown strength of transformer oil.
- Draw electric field and measure the capacitance of different electrode configuration models.
- Show knowledge of generating standard lightning impulse voltage to determine efficiency, energy of impulse generator and 50% probability flashover voltage for air insulation.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.

#### **Conduct of Practical Examination:**

1. All laboratory experiments are to be included for practical examination.

2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.

- 3. Students can pick one experiment from the questions lot prepared by the examiners.
- 4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■

## PROJECT PHASE – I AND SEMINAR B.E., VII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                     | 17EEP78 | CIE Marks  | 100 |  |
|---------------------------------|---------|------------|-----|--|
| Number of Practical Hours/Week  |         | Exam Hours |     |  |
| Total Number of Practical Hours |         | Exam Marks |     |  |
| Credits - 02                    |         |            |     |  |

## **Course objectives:**

- Support independent learning.
- Guide to select and utilize adequate information from varied resources maintaining ethics.
- Guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.
- Develop interactive, communication, organisation, time management, and presentation skills.
- Impart flexibility and adaptability.
- Inspire independent and team working.
- Expand intellectual capacity, credibility, judgement, intuition.
- Adhere to punctuality, setting and meeting deadlines.
- Instil responsibilities to oneself and others.
- Train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas.

**Project Phase-1** Students in consultation with the guide/s shall carry out literature survey/ visit industries to finalize the topic of the Project. Subsequently, the students shall collect the material required for the selected project, prepare synopsis and narrate the methodology to carry out the project work

Seminar: Each student, under the guidance of a Faculty, is required to

- Present the seminar on the selected project orally and/or through power point slides.
- Answer the queries and involve in debate/discussion.
- Submit two copies of the typed report with a list of references.

The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident.

| <b>Revised Bloom's</b> | $L_3$ – Applying, $L_4$ – Analysing, $L_5$ – Evaluating, $L_6$ – Creating. |
|------------------------|--|
| Taxonomy Level         |  |
| Course outcom          | es:  |

At the end of the course the student will be able to:

- Demonstrate a sound technical knowledge of their selected project topic.
- Undertake problem identification, formulation and solution.
- Design engineering solutions to complex problems utilising a systems approach.

• Communicate with engineers and the community at large in written an oral forms.

## **Graduate Attributes (As per NBA)**

Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.

#### **Continuous Internal Evaluation**

CIE marks for the project report (50 marks) and seminar (50 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairman.

- Explain basic generator control loops, functions of Automatic generation control, speed governors
- Develop and analyze mathematical models of Automatic Load Frequency Control
- Explain automatic generation control, voltage and reactive power control in an interconnected power system.
- Explain reliability, security, contingency analysis, state estimation and related issues of power systems.

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Conduct investigations of complex problems, Modern Tool Usage, Communication, Life-long Learning.

#### **Question paper pattern:**

• The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.

• There will be two full questions (with a maximum of four sub questions) from each module.

• Each full question will have sub question covering all the topics under a module.

#### Textbook 1<sup>st</sup> Edition, 2012 1 Power System Operation and Control K. Uma Rao Wiley **Reference Books** Power Generation Operation and Allen J Wood etal 2nd Edition,2003 1 Wiley Control 2 Power System Stability and Control Kundur McGraw Hill 8th Reprint, 2009

#### **INDUSTRIAL DRIVES AND APPLICATIONS(Core Course)** B.E., VIII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme] Course Code 17EE82 **CIE Marks** 40 Number of Lecture Hours/Week 04 SEE Marks 60 Total Number of Lecture Hours 50 Exam Hours 03 Credits - 04 **Course objectives:** To define electric drive, its parts, advantages and explain choice of electric drive. To explain dynamics and modes of operation of electric drives. To explain selection of motor power ratings and control of dc motor using rectifiers. To analyze the performance of induction motor drives under different conditions. To explain the control of induction motor, synchronous motor and stepper motor drives. To discuss typical applications electrical drives in the industry. Module-1 Teaching Hours Electrical Drives: Electrical Drives, Advantages of Electrical Drives. Parts of Electrical Drives, 10 Choice of Electrical Drives. Status of dc and ac Drives. Dynamics of Electrical Drives: Fundamental Torque Equations, Speed TorqueConventions and Multiquadrant Operation. Equivalent Values of DriveParameters, Components of Load Torques, Nature and Classification of LoadTorques, Calculation of Time and Energy Loss in Transient Operations, SteadyState Stability, Load Equalization. Control Electrical Drives: Modes of Operation, Speed Control and Drive Classifications, Closed loop Control of Drives. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. **Taxonomy Level** Module-2 Selection of Motor Power Ratings: Thermal Model of Motor for Heating and Cooling, Classes of 10 Motor Duty, Determination of Motor Rating. Direct Current Motor Drives: Controlled Rectifier Fed dc Drives, Single Phase Fully Controlled Rectifier Control of dc Separately Excited Motor, SinglePhase Half Controlled Rectifier Control of dc Separately Excited Motor, Three Phase Fully Controlled Rectifier Control of dc Separately Excited Motor, Three Phase Half Controlled Rectifier Control of dc Separately Excited Motor, Multiquadrant Operation of dc Separately Excited Motor Fed Form Fully Controlled Rectifier, Rectifier Control of dc Series Motor, Supply Harmonics, Power Factor and Ripple in Motor Current, Chopper Control of Separately Excited dcMotor, Chopper Control of Series Motor. **Revised Bloom's** $L_1$ – Remembering, $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing. **Taxonomy Level** Module-3 Induction Motor Drives: Analysis and Performance of Three Phase Induction Motors, Operation 10 with Unbalanced Source Voltage and Single Phasing, Operation with Unbalanced Rotor Impedances, Analysis of Induction Motor Fed From Non-Sinusoidal Voltage Supply, Starting, Braking, Transient Analysis.Speed Control Techniques-Stator Voltage Control, Variable Voltage Frequency Control from Voltage Sources. **Revised Bloom's** $L_2$ – Understanding, $L_3$ – Applying, $L_4$ – Analysing, $L_5$ – Evaluating. **Taxonomy Level** Module-4 Induction Motor Drives (continued): Voltage Source Inverter (VSI) Control, Cycloconverter 10 Control, Closed Loop Speed Control and Converter Rating for VSI and Cycloconverter Induction Motor Drives, Variable Frequency Control from a Current Source, Current Source (CSI) Control, current regulated voltage source inverter control, speed control of single phase induction motors Synchronous Motor Drives: Operation from fixed frequency supply-starting, synchronous motor $L_1-Remembering,\ L_2-Understanding,\ L_3-Applying,\ L_4-Analysing.$ **Revised Bloom's Taxonomy Level**

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER –VIII

#### 17EE831 SMART GRID(Professional Elective) (continued)

## Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

|   |                     |
| Course outcomes:<br>At the end of the course the student will be able to:<br>Explain energy generation by wind power and solar power.<br>Discuss the variation in production capacity at different timescales, the size of indiv  | idual units and the |

### **B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VIII** 17EE833 INTEGRATION OF DISTRIBUTED GENERATION(Professional Elective)(continued) **Course outcomes (continued):** Explain the performance of the system when distributed generation is integrated to the system. • Discuss effects of the integration of DG: the increased risk of overload and increased losses. Discuss effects of the integration of DG: increased risk of overvoltages, increased levels of power quality disturbances. Discuss effects of the integration of DG: incorrect operation of the protection Discuss the impact the integration of DG on power system stability and operation. **Graduate Attributes (As per NBA)** Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of complex problems, Modern Tool Usage, The Engineer and Society, Ethics, Individual and Team Work, Communication, Project Management and Finance, Life-long Learning. Question paper pattern: The question paper will have ten questions. Each full question is for 16 marks. There will be 2full questions (with a maximum of four sub questions in one full question) from each module. Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. Textbook Integration of Distributed Generation in the Power Math Bollen Wiley 2011 1 System

| <ul> <li>Course outcomes:</li> <li>At the end of the course the student will be able to:</li> <li>Explain disturbances that may occur in a power system and the impact of them on its operation</li> <li>Give the definitions, concepts and standard terminology used in the literature on emergency of discuss the effect of system structure on the form of emergency control</li> </ul>   |                   |
| • Discuss the structure, function and alternatives for main transmission   |                   |

- To discuss standards of security and quality of supply in planning and operation,timescales, tasks in system operation and control, SCADA facilities functions, structure, performance criteria, data and human computer interface
- To discuss energy management systems, communications, telemetry, telecommand and distributed generation.
- To discuss factors affecting the onset, severity and propagation of a disturbance, measures to minimize the risk
- To discuss weather related disturbances that can occur in the power systems and aids to the restoration process and problems which hinder restoration
- To discuss different simulators used in training, facilities and characteristics for emergency control, and benefits of emergency control and emergency control in the future. ■

#### Graduate Attributes (As per NBA)

Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of complex problems, Modern Tool Usage, The Engineer and Society, Ethics, Individual and Team Work, Communication, Project Management and Finance, Life-long Learning.

#### **Question paper pattern:**

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2full questions (with a maximum of four sub questions in one full question) from each

# INTERNSHIP / PROFESSIONAL PRACTICE B.E., VIII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                     | 17EE84      | CIE Marks  | 50 |
|---------------------------------|-------------|------------|----|
| Number of Practical Hours/Week  |             | Exam Hours |    |
| Total Number of Practical Hours |             | Exam Marks | 50 |
|                                 | Credits - 0 | 2          |    |

### **Course objectives:**

Internship/Professional practice provide students the opportunity of hands-on experience that include personal training, time and stress management, interactive skills, presentations, budgeting, marketing, liability and risk management, paperwork, equipment ordering, maintenance, responding to emergencies etc. The objective are further,

- To put theory into practice.
- To expand thinking and broaden the knowledge and skills acquired through course work in the field.
- To relate to, interact with, and learn from current professionals in the field.
- To gain a greater understanding of the duties and responsibilities of a professional.
- To understand and adhere to professional standards in the field.
- To gain insight to professional communication including meetings, memos, reading, writing, public

**Internship/Professional practice:**Students under the guidance ofinternal guide/s and external guide shall take part in all the activities regularly to acquire as much knowledge as possible without causing any inconvenience at the place of internship.

Seminar: Each student, is required to

- Present the seminar on the internship orally and/or through power point slides.
- Answer the queries and involve in debate/discussion.
- Submit the report duly certified by the external guide.

The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident.

# **Revised Bloom's** L<sub>3</sub> – Applying, L<sub>4</sub> – Analysing, L<sub>5</sub> – Evaluating, L<sub>6</sub> – Creating

#### **Course outcomes:**

At the end of the course the student will be able to:

- Gain practical experience within industry in which the internship is done.
- Acquire knowledge of the industry in which the internship is done.
- Apply knowledge and skills learned to classroom work.
- Develop a greater understanding about career options while more clearly defining personal career goals.
- Experience the activities and functions of professionals.
- Develop and refine oral and written communication skills.

**Graduate Attributes (As per NBA):** Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Engineers and society, Environment and sustainability, Ethics, Individual and Team work, Communication.

#### B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - VIII

#### 17EE84INTERNSHIP / PROFESSIONAL PRACTICE(continued)

#### **Continuous Internal Evaluation**

CIE marks for the Internship/Professional practicereport (25 marks) and seminar (25 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairman.

#### Semester End Examination

SEE marks for the project report (25 marks) and seminar (25 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) by the examiners appointed by the University.  $\blacksquare$ 

## PROJECT WORK PHASE -II B.E., VIII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                     | 17EEP85     | CIE Marks  | 100 |
|---------------------------------|-------------|------------|-----|
| Number of Practical Hours/Week  |             | Exam Hours |     |
| Total Number of Practical Hours |             | Exam Marks | 100 |
|                                 | Credits - 0 | 6          |     |

#### **Course objectives:**

- To support independent learning.
- To guide to select and utilize adequate information from varied resources maintaining ethics.
- To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly.
- To develop interactive, communication, organisation, time management, and presentation skills.
- To impart flexibility and adaptability.
- To inspire independent and team working.
- To expand intellectual capacity, credibility, judgement, intuition.
- To adhere to punctuality, setting and meeting deadlines.
- To instil responsibilities to oneself and others.
- To train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas. ■

**Project Work Phase - II:**Each student of the project batch shall involve in carrying out the project work jointly in constant consultation with internal guide, co-guide, and external guide and prepare the project report as per the norms avoiding plagiarism.

### **Revised Bloom's** $L_3$ – Applying, $L_4$ – Analysing, $L_5$ – Evaluating, $L_6$ – Creating

Taxonomy Level

### **Course outcomes:**

At the end of the course the student will be able to:

- Present the project and be able to defend it.
- Make links across different areas of knowledge and to generate, develop and evaluate ideas and information so as to apply these skills to the project task.
- Habituated to critical thinking and use problem solving skills
- Communicate effectively and to present ideas clearly and coherently in both the written and oral forms.
- Work in a team to achieve common goal.
- Learn on their own, reflect on their learning and take appropriate actions to improve it.

#### Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Engineers and society, Environment and sustainability, Ethics, Individual and Team work, Communication.

#### **Evaluation Procedure:**

The Internal marks evaluation shall be based on project report and presentation of the same in a seminar.

**Project Report:**50 marks. The basis for awarding the marks shall be the involvement of individual student of the project batch in carrying the project and preparation of project report. To be awarded by the internal guide in consultation with external guide if any.

**Project Presentation:**50 marks. Each student of the project batch shall present the topic of Project Work Phase - II orally and/or through power point slides.

The Project Presentation marks of the Project Work Phase -II shall be awarded by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairman.

The student shall be evaluated based on:

Presentation skill for 30 marks and ability in the Question and Answer session for 20 marks.

### Semester End Examination

SEE marks for the project (100 marks)shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) as per the University norms by the examiners appointed VTU.

### SEMINAR B.E., VIII Semester, Electrical and Electronics Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                     | 17EES86 | CIE Marks  | 100 |  |  |  |
|---------------------------------|---------|------------|-----|--|--|--|
| Number of Practical Hours/Week  |         | Exam Hours |     |  |  |  |
| Total Number of Practical Hours |         | Exam Marks |     |  |  |  |
| Credits - 01                    |         |            |     |  |  |  |

#### **Course objectives:**

The objective of the seminar is to inculcate self-learning, face audience confidently, enhance communication skill, involve in group discussion and present and exchange ideas.

Each student, under the guidance of a Faculty, is required to

Choose, preferably, a recent topic of his/her interest relevant to the Course of Specialization.

- Carryout literature survey, organize the Course topics in a systematic order.
- Prepare the report with own sentences.
- Type the matter to acquaint with the use of Micro-soft equation and drawing tools or any such facilities.
- Present the seminar topic orally and/or through power point slides.
- Answer the queries and involve in debate/discussion.
- Submit typed report with a list of references.

The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident. ■

**Revised Bloom's**  $L_3$  – Applying,  $L_4$  – Analysing,  $L_5$  – Evaluating,  $L_6$  – Creating

# Taxonomy Level Course outcomes:

At the end of the course the student will be able to:

- Attain, use and develop knowledge in the field of electrical and electronics engineering and other disciplines through independent learning and collaborative study.
- Identify, understand and discuss current, real-time issues
- Improve oral and written communication skills
- Explore an appreciation of the self in relation to its larger diverse social and academic contexts.

#### Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Engineers and society, Environment and sustainability, Ethics, Individual and Team work, Communication.

#### **Evaluation Procedure:**

The CIE marks for the seminar shall be awarded (based on the relevance of the topic, presentation skill, participation in the question and answer session and quality of report) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculties from the department with the senior most acting as the Chairman.

Marks distribution for internal assessment of the course 15EES86 seminar:

Seminar Report: 30 marks

Presentation skill:50 marks

Question and Answer:20 marks.■

V SEMESTER

1. Core subject: This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.

2. Professional Elective: Elective relevant to chosen specialization/ branch

3. Open Elective: Electives from other technical and/or emerging subject areas.

#### VIII SEMESTER

# B.E, III Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme] MATERIAL SCIENCE

| Course Code                   | 17ME32                  | CIE Marks  | 40 |  |  |
|-------------------------------|-------------------------|------------|----|--|--|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
| Credits – 04                  |                         |            |    |  |  |

Course Objectives:

- The foundation for understanding the structure and various modes of failure in materials common in mechanical engineering.
- Topics are designed to explore the mechanical properties of metals and their alloys, polymers, ceramics ,smart materials and composites.
- The means of modifying such properties, as well as the processing and failure of materials.
- Concepts of use of materials for various applications are highlighted.

#### Module - 1

#### Basics, Mechanical Behavior, Failure of Materials

Introduction to Crystal Structure – Coordination number, atomic packing factor, Simple Cubic, BCC, FCC and HCP Structures, Crystal imperfections – point, line, surface and volume imperfections, Atomic Diffusion: Phenomenon, Fick's laws of diffusion; Factors affecting diffusion.

#### Mechanical Behavior:

Stress-strain diagrams showing ductile and brittle behavior of materials, Engineering and true strains, Linear and non-linear elastic behavior and properties, Mechanical properties in plastic range. Stiffness, Yield strength, Offset Yield strength, Ductility, Ultimate Tensile strength, Toughness, Plastic deformation of single crystal by slip and twinning, Mechanisms of strengthening in metals

Fracture: Type I, Type II and Type III,

**Fatigue:** Types of fatigue loading with examples, Mechanism of fatigue, Fatigue properties, S-N diagram, Fatigue testing. **Creep:** Description of the phenomenon with examples, three stages of creep, creep properties, Stress relaxation. Concept of fracture toughness.

#### Module - 2

### Alloys, Steels, Solidification

Concept of formation of alloys: Types of alloys, solid solutions, factors affecting solid solubility (Hume Rothery rules), Binary phase diagrams: Eutectic, and Eutectoid systems, Lever rule, Substitutional and interstitial solid solutions, Intermediate phases, Gibbs phase rule Effect of non- equilibrium cooling, Coring and Homogenization Iron-Carbon (Cementite) diagram: description of phases, Specifications of steels. Solidification: Mechanism of solidification, Homogenous and Heterogeneous nucleation, Crystal growth, Numerical on lever rule

Module - 3

### Heat Treatment, Ferrous and Non-Ferrous Alloys

Heat treating of metals: Time-Temperature-Transformation (TTT) curves, Continuous Cooling Transformation (CCT) curves, Annealing: Recovery, Recrystallization and Grain growth, Types of annealing, Normalizing, Hardening, Tempering, Martempering, Austempering, Concept of hardenability, Factors affecting it hardenability, surface hardening methods: carburizing, cyaniding, nitriding, flame hardening and induction hardening, Age hardening of aluminum-copper alloys and PH steels. Ferrous materials: Properties, Compositions and uses of Grey cast iron, Malleable iron, SG iron and steel,

Module - 4

#### **Other Materials, Material Selection**

**Ceramics:** Structure types and properties and applications of ceramics. Mechanical / Electrical behavior and processing of Ceramics. **Plastics:** Various types of polymers/plastics and their applications. Mechanical behaviors and processing of plastics, Failure of plastics. **Other materials:**Smart materials and Shape Memory alloys, properties and applications.

Module - 5

#### **Composite Materials**

Composite materials - Definition, classification, types of matrix materials & reinforcements, Metal Matrix Composites (MMCs), Ceramic Matrix Composites (CMCs) and Polymer Matrix Composites (PMCs), Particulate-reinforced and fiber-reinforced composites, Fundamentals of production of composites, Processes for production of composites, Constitutive relations of composites, Numerical problems on determining properties of composites.

#### **Course outcomes:**

- Describe the mechanical properties of metals, their alloys and various modes of failure.
- Understand the microstructures of ferrous and non-ferrous materials to mechanical properties.
- Explain the processes of heat treatment of various alloys.
- Understand the properties and potentialities of various materials available and material selection procedures.
- Know about composite materials and their processing as well as applications.

#### **TEXT BOOKS:**

- 1. Smith, Foundations of Materials Science and Engineering, 4th Edition, McGraw Hill, 2009.
- 2. William D. Callister, Material science and Engineering and Introduction, Wiley, 2006.

#### **REFERENCE BOOKS**

- 1. V.Raghavan, Materials Science and Engineering, , PHI, 2002
- 2. Donald R. Askland and Pradeep.P. Phule, The Science and Engineering of Materials, Cengage Learning, 4lh Ed., 2003.
- 3. George Ellwood Dieter, Mechanical Metallurgy, McGraw-Hill.
- 4. ASM Handbooks, American Society of Metals.

# BASIC THERMODYNAMICS B.E, III Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME33                  | CIE Marks  | 40 |  |  |
|-------------------------------|-------------------------|------------|----|--|--|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
| Credits – 04                  |                         |            |    |  |  |

**Course Objectives:** 

- Learn about thermodynamic systems and boundaries
- Study the basic laws of thermodynamics including, conservation of mass, conservation of energy or first law, second law and Zeroth law.
- Understand various forms of energy including heat transfer and work
- Identify various types of properties (e.g., extensive and intensive properties)
- Use tables, equations, and charts, in evaluation of thermodynamic properties
- Apply conservation of mass, first law, and second law in thermodynamic analysis of systems (e.g., turbines, pumps, compressors, heat exchangers, etc.)
- Enhance their problem solving skills in thermal engineering

### Module - 1

**Fundamental Concepts & Definitions:** Thermodynamic definition and scope, Microscopic and Macroscopic approaches. Some practical applications of engineering thermodynamic Systems, Characteristics of system boundary and control surface, examples. Thermodynamic properties; definition and units, intensive, extensive properties, specific properties, pressure, specific volume Thermodynamic state, state point, state diagram, path and process, quasi-static process, cyclic and non-cyclic; processes;Thermodynamic equilibrium; definition, mechanical equilibrium; diathermic wall, thermal equilibrium, chemical equilibrium, Zeroth law of thermodynamics, Temperature; concepts, scales, international fixed points and measurement of temperature. Constant volume gas thermometer, constant pressure gas thermometer, mercury in glass thermometer

**Work and Heat**: Mechanics, definition of work and its limitations. Thermodynamic definition of work; examples, sign convention. Displacement work; as a part of a system boundary, as a whole of a system boundary, expressions for displacement work in various processes through p-v diagrams. Shaft work; Electrical work. Other types of work. Heat; definition, units and sign convention. Problems

L1,L2

#### Module - 2

First Law of Thermodynamics: Joules experiments, equivalence of heat and work. Statement of the First law of thermodynamics, extension of the First law to non - cyclic processes, energy, energy as a property, modes of energy, Extension of the First law to control volume; steady flow energy equation(SFEE), important applications.

**Second Law of Thermodynamics:** limitations of first law of thermodynamics Devices converting heat to work; (a) in a thermodynamic cycle, (b) in a mechanical cycle. Thermal reservoir, Direct heat engine; schematic representation and efficiency. Devices converting work to heat in a thermodynamic cycle; reversed heat engine, schematic representation, coefficients of performance. Kelvin - Planck statement of the Second law of Thermodynamics; PMM I and PMM II, Clausius statement of Second law of Thermodynamics, Equivalence of the two statements; Carnot cycle, Carnot principles. Problems

L1 , L2, L3

**Reversibility:** Definitions of a reversible process, reversible heat engine, importance and superiority of a reversible heat engine and irreversible processes; factors that make a process irreversible, reversible heat engines. Unresisted expansion, remarks on Carnot's engine, internal and external reversibility, Definition of the thermodynamic temperature scale. Problems

**Entropy:** Clasius inequality, Statement- proof, Entropy- definition, a property, change of entropy, entropy as a quantitative test for irreversibility, principle of increase in entropy, entropy as a coordinate.

L1 , L2, L3

# Module - 4

Availability, Irreversibility and General Thermodynamic relations. Introduction, Availability (Exergy), Unavailable energy, Relation between increase in unavailable energy and increase in entropy. Maximum work, maximum useful work for a system and control volume, irreversibility, second law efficiency. Pure Substances: P-T and P-V diagrams, triple point and critical points. Sub-cooled liquid, saturated liquid, mixture of saturated liquid and vapor, saturated vapor and superheated vapor states of pure substance with water as example. Enthalpy of change of phase (Latent heat). Dryness fraction (quality), T-S and H-S diagrams, representation of various processes on these diagrams. Steam tables and its use. Throttling calorimeter, separating and throttling calorimeter.

L1 , L2, L3

#### Module - 5

**Ideal gases:** Ideal gas mixtures, Daltons law of partial pressures, Amagat's law of additive volumes, evaluation of properties of perfect and ideal gases, Air- Water mixtures and related properties.

**Real gases** – Introduction, Van-der Waal's Equation of state, Van-der Waal's constants in terms of critical properties, Beattie-Bridgeman equation, Law of corresponding states, compressibility factor; compressibility chart.Difference between Ideal and real gases.

L1,L2

#### **Course outcomes:**

- Explain thermodynamic systems, properties, Zeroth law of thermodynamics, temperature scales and energy interactions.
- Determine heat, work, internal energy, enthalpy for flow & non flow process using First and Second Law of Thermodynamics.
- Interpret behavior of pure substances and its applications to practical problems.
- Determine change in internal energy, change in enthalpy and change in entropy using TD relations for ideal gases.
- Calculate Thermodynamics properties of real gases at all ranges of pressure, temperatures using modified equation of state including Vander Waals equation, Redlich Wong equation and Beattie-

#### **TEXT BOOKS:**

# MECHANICS OF MATERIALS B.E, III Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME34                  | CIE Marks  | 40 |  |  |
|-------------------------------|-------------------------|------------|----|--|--|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
| Credits – 04                  |                         |            |    |  |  |

**Course Objectives:** 

- Classify the stresses into various categories and define elastic properties of materials and compute stress and strain intensities caused by applied loads in simple and compound sections and temperature changes.
- Derive the equations for principal stress and maximum in-plane shear stress and calculate their magnitude and direction. Draw Mohr circle for plane stress system and interpret this circle.
- Determine the shear force, bending moment and draw shear force and bending moment diagrams, describe behavior of beams under lateral loads.
- Explain the structural behavior of members subjected to torque, Calculate twist and stress induced in shafts subjected to bending and torsion.
- Understand the concept of stability and derive crippling loads for columns.
- Understand the concept of strain energy and compute strain energy for applied loads.

| Module - 1   |
|--|
| Stress and Strain: Introduction, Hooke's law, Calculation of stresses in straight, Stepped and tapered sections, Composite sections, Stresses due to temperature     |
| change, Shear stress and strain, Lateral strain and Poisson's ratio, Generalized Hooke's law, Bulk modulus, Relationship between elastic constants.                  |
| Module - 2   |
| Analysis of Stress and Strain: Plane stress, Stresses on inclined planes, Principal stresses and maximum shear stress, Principal angles, Shear stresses on principal |
| planes, Maximum shear tress, Mohr circle for plane stress conditions.  |
| Cylinders: Thin cylinder: Hoop's stress, maximum shear stress, circumferential and longitudinal strains, Thick cylinders: Lames equations.                           |
| Module - 3   |
| Shear Forces and Bending Moments: Type of beams, Loads and reactions, Relationship between loads, shear forces and bending moments, Shear force and                  |
| bending moments of cantilever beams, Pin support and roller supported beams subjected to concentrated loads and uniformly distributed constant / varying             |
| loads.   |

**Stress in Beams:** Pure bending, Curvature of a beam, Longitudinal strains in beams, Normal stresses in Beams with rectangular, circular, 'I' and 'T' cross sections, Flexure Formula, Bending Stresses.

#### Module - 4

**Torsion:** Circular solid and hallow shafts, Torsional moment of resistance, Power transmission of straight and stepped shafts, Twist in shaft sections, Thin tubular sections, Thin walled sections

**Columns:** Buckling and stability, Critical load, Columns with pinned ends, Columns with other support conditions, Effective length of columns, Secant formula for columns.

#### Module - 5

Strain Energy: Castigliano's theorem I and II, Load deformation diagram, Strain energy due to normal stresses, Shear stresses, Modulus of resilience, Strain energy due to bending and torsion.

Theories of Failure: Maximum Principal stress theory, Maximum shear stress theory.

#### **Course outcomes:**

- Understand simple, compound, thermal stresses and strains their relations, Poisson's ratio, Hooke's law, mechanical properties including elastic constants and their relations.
- Determine stresses, strains and deformations in bars with varying circular and rectangular cross-sections subjected to normal and temperature loads
- Determine plane stress, principal stress, maximum shear stress and their orientations using analytical method and Mohr's circle
- Determine the dimensions of structural members including beams, bars and rods using Energy methods and also stress distribution in thick and thin cylinders
- Draw SFD and BMD for different beams including cantilever beams, simply supported beams and overhanging beams subjected to UDL, UVL, Point loads and couples
- Determine dimensions, bending stress, shear stress and its distribution in beams of circular, rectangular, symmetrical I and T sections subjected to point loads and UDL
- Determine the dimensions of shafts based on torsional strength, rigidity and flexibility and also elastic stability of columns using Rankin's and Euler's theory

#### **TEXT BOOKS:**

#### WELDING PROCESS

**Welding process:** Definition, Principles, Classification, Application, Advantages & limitations of welding. Arc welding: Principle, Metal arc welding (MAW), Flux Shielded Metal Arc Welding (FSMAW), Inert Gas Welding (TIG & MIG) Submerged Arc Welding (SAW) and Atomic Hydrogen Welding (AHW). **Special type of welding:** Resistance welding principles, Seam welding, Butt welding, Spot welding and Projection welding. Friction welding, Explosive welding, Thermit welding, Laser welding and electron beam welding.

#### Module - 5

#### SOLDERING, BRAZING AND METALLURGICAL ASPECTS IN WELDING

Structure of welds, Formation of different zones during welding, Heat Affected Zone (HAZ), Parameters affecting HAZ. Effect of carbon content on structure and properties of steel, Shrinkage in welds& Residual stresses, Concept of electrodes, filler rod and fluxes. Welding defects- Detection, causes & remedy. **Soldering, brazing, gas welding:** Soldering, Brazing, Gas Welding: Principle, oxy-Acetylene welding, oxy-hydrogen welding, air-acetylene welding, Gas cutting, powder cutting.

**Inspection methods:** Methods used for inspection of casting and welding. Visual, magnetic particle, fluorescent particle, ultrasonic. Radiography, eddy current, holography methods of inspection.

#### **Course outcomes:**

- Describe the casting process, preparation of Green, Core, dry sand molds and Sweep, Shell, Investment and plaster molds.
- Explain the Pattern, Core, Gating, Riser system and Jolt, Squeeze, Sand Slinger Molding Machines.
- Compare the Gas fired pit, Resistance, Coreless, Electrical and Cupola Metal Furnaces.
- Compare the Gravity, Pressure die, Centrifugal, Squeeze, slush and Continuous Metal mold castings.
- Explain the Solidification process and Casting of Non-Ferrous Metals.
- Describe the Metal Arc, TIG, MIG, Submerged and Atomic Hydrogen Welding processes used in manufacturing.
- Explain the Resistance spot, Seam, Butt, Projection, Friction, Explosive, Thermit, Laser and Electron Beam Special type of welding process used in manufacturing.
- Describe the Metallurgical aspects in Welding and inspection methods for the quality assurance of components made of casting and joining process.

#### **TEXT BOOKS:**

machining at maximum efficiency, Numerical problems

**Course outcomes:** 

- Explain the construction & specification of various machine tools.
- Describe various machining processes pertaining to relative motions between tool & work piece.
- Discuss different cutting tool materials, tool nomenclature & surface finish.
- Apply mechanics of machining process to evaluate machining time.
- Analyze tool wear mechanisms and equations to enhance tool life and minimize machining cost.

# COMPUTER AIDED MACHINE DRAWING B.E, III/IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code           | 17ME36 A / 46A          | CIE Marks  | 40 |  |  |
|-----------------------|-------------------------|------------|----|--|--|
| Number of Hours/Week  | 05                      | SEE Marks  | 60 |  |  |
| Total Number of Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
| Credits – 03          |                         |            |    |  |  |

**Course Objectives:** 

- To acquire the knowledge of CAD software and its features.
- To inculcate understanding of the theory of projection and make drawings using orthographic projections and sectional views
- To familiarize the students with Indian Standardson drawing practices.
- To impart knowledge of thread forms, fasteners, keys, joints and couplings.
- To make the students understand and interpret drawings of machine components so as to prepare assembly drawings either manually and using CAD packages.
- To acquire the knowledge of limits, tolerances and fitspertaining to machine drawings.

#### PART A INTRODUCTION TO COMPUTER AIDED SKETCHING Review of graphic interface of the software. Review of basic sketching commands and navigational commands. 2 Hours Sections of Solids: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems on, axis inclinations, spheres and hollow solids), True shape of section. 4 Hours Orthographic views: Conversion of pictorial views into orthographic projections of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings), Hidden line conventions, Precedence of lines. 4 Hours Thread forms: Thread terminology, sectional views of threads. ISO Metric (Internal & External), BSW (Internal and External), square, Acme and Sellers thread, American Standard thread. Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen screw. 8 Hours PART B Keys and Joints: Parallel, Taper, Feather Key, Gib head key and Woodruff key Riveted joints: Single and double riveted lap joints, Butt joints with single/double cover straps (Chain and zigzag using snap head riveters). Joints:Cotter joint (socket and spigot), Knuckle joint (pin joint) for two rods.8 Hours Couplings: Split muff coupling, Protected type flange coupling, Pin (bush) type flexible coupling, Oldham's coupling and Universal coupling (Hook's Joint).

6 Hours

Limits, Fits and Tolerances: Introduction, Fundamental tolerances, Deviations, Methods of placing limit dimensions, Types of fits with symbols and applications, Geometrical tolerances on drawings, Standards followed in industry. 3 Hours Assembly Drawings: (Part drawings shall be given) 1. Plummer block (Pedestal Bearing) 2. Rams Bottom Safety Valve 3. I.C. Engine connecting rod 4. Screw jack (Bottle type) 5. Tailstock of lathe 6. Machine vice 7. Lathe square tool post 15 Hours **Course outcomes:** Sections of pyramids, prisms, cubes, cones and cylinders resting on their bases in 2D Orthographic views of machine parts with and without sectioning in 2D. Sectional views for threads with terminologies of ISO Metric, BSW, square and acme, sellers and American standard threads in 2D. Hexagonal and square headed bolt and nut with washer, stud bolts with nut and lock nut, flanged nut, slotted nut, taper and split pin for locking counter sunk head screw, grub screw, Allen screw assemblies in 2D Parallel key, Taper key, and Woodruff Key as per the ISO standards in 2D single and double riveted lap joints, butt joints with single/double cover straps, cotter and knuckle joint for two rods in 2D Sketch split muff, protected type flanged, pin type flexible, Oldham's and universal couplings in 2D ٠ assemblies from the part drawings with limits ,fits and tolerance given for Plummer block, Ram bottom safety valve, I.C. Engine connecting rod, Screw Jack, Tailstock of lathe, Machine Vice and Lathe square tool post in 2D and 3D **TEXT BOOKS:** 1. 'A Primer on Computer Aided Machine Drawing-2007', Published by VTU, Belgaum. 2. 'Machine Drawing', N.D.Bhat&V.M.Panchal, Published by Charotar Publishing House, 1999. 3. 'Machine Drawing', N.Siddeshwar, P.Kannaih, V.V.S. Sastri, published by Tata Mc.Grawhill, 2006.

#### **REFERENCE BOOKS**

- 1. "A Text Book of Computer Aided Machine Drawing", S. Trymbakaa Murthy, CBS Publishers, New Delhi, 2007.
- 2. 'Machine Drawing', K.R. Gopala Krishna, Subhash publication.

#### **Internal Assessment: 20 Marks**

Sketches shall be in sketch books and drawing shall through use of software on A3/A4 sheets. Sketch book and all the drawing printouts shall be submitted.

#### Scheme of Evaluation for Internal Assessment (40 Marks)

- (a) Class work (Sketching and Computer Aided Machine drawing printouts in A4/A3 size sheets): 20Marks.
- (b) Internal Assessment test in the same pattern as that of the main examination: 20 marks.

#### Scheme of Examination:

Two questions to be set from each Part A, part B and Part C. Student has to answer one question each from Part A, Part B for 15 marks each and one question from Part C for 50 marks.

| Part A 1 x 25 | = | 25 Marks |
|---------------|---|----------|
|---------------|---|----------|

| Part B 1 x 25 | = | 25 Marks |
|---------------|---|----------|
|---------------|---|----------|

Total

Part C 1 x 50 = 50 Marks

= 100 Marks

#### INSTRUCTION FOR COMPUTER AIDED MACHINE DRAWING (15ME36A/46A) EXAMINATION

- 1. No restriction of timing for sketching/ computerization of solutions. The total duration is 3 hours.
- 2. It is desirable to do sketching of all the solutions before computerization.
- 3. Drawing instruments may be used for sketching.
- 4. For Part A and Part B, 2D drafting environment should be used.
- 5. For Part C 3D part environment should be used for parts assembly drawing and extract 2D views.

# MECHANICAL MEASUREMENTS AND METROLOGY B.E, III/IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME36 B / 46B          | CIE Marks  | 40 |  |  |
|-------------------------------|-------------------------|------------|----|--|--|
| Number of Lecture Hours/Week  | 03                      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
| Credits – 03                  |                         |            |    |  |  |

**Course Objectives:** 

- Understand metrology, its advancements & measuring instruments,
- Acquire knowledge on different standards of length, calibration of End Bars, linear and angular measurements, Screw thread and gear measurement & comparators.
- Equip with knowledge of limits, fits, tolerances and gauging.
- Acquire knowledge of measurement systems and methods with emphasis on different transducers, intermediate modifying and terminating devices.
- Understand the measurement of Force, Torque, Pressure, Temperature and Strain.

Module - 1

#### MACHINE TOOLS

**Introduction to Metrology:** Definition, objectives and concept of metrology, Need of inspection, Principles, process, methods of measurement, Classification and selection of measuring instruments and systems. Accuracy, precision and errors in measurement.

System of measurement, Material Standard, Wavelength Standards, Subdivision of standards, Line and End standards, Classification of standards and Traceability, calibration of End bars (Numerical Problems), standardization.

#### Linear Measurement and angular measurements:

Slip gauges- Indian standards on slip gauge, method of selection of slip gauge, stack of slip gauge, adjustable slip gauge, wringing of slip gauge, care of slip gauge, slip gauge accessories, problems on building of slip gauges (M87, M112).

Measurement of angles- sine bar, sine center, angle gauges, optical instruments for angular measurements, Auto collimator-applications for measuring straightness and squareness.

Module - 2

#### System of Limits, Fits, Tolerance and Gauging:

Definition of tolerance, Specification in assembly, Principle of interchangeability and selective assembly, limits of size, Indian standards, concept of limits of size and tolerances, definition of fits, hole basis system, shaft basis system, types of fits and their designation (IS 919-1963), geometric tolerance, position-tolerances. Classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge and gauge materials.

#### **Comparators:**

Functional requirements, classification, mechanical- Johnson Mikrokator, sigma comparators, dial indicator, electrical- principles, , LVDT, Pneumatic- back pressure gauges, Solex comparators and optical comparators- Zeiss ultra-optimeter.

Module - 3

#### Measurement of screw thread and gear:

Terminology of screw threads, measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2-wire and 3- wire methods, best size wire. Screw thread gauges, Tool maker's microscope.

Gear tooth terminology, tooth thickness measurement using constant chord method, addendum comparator method and base tangent method, measurement of pitch, concentricity, run out, and involute profile. Gear roll tester for composite error.

#### Advances in metrology:

Basic concepts of lasers, advantages of lasers, laser interferometers, types, applications. Basic concepts of Coordinate Measuring Machines-constructional features, applications.

Module - 4

#### Measurement systems and basic concepts of measurement methods:

Definition, significance of measurement, generalized measurement system, definitions and concept of accuracy, precision, calibration, threshold, sensitivity, hysteresis, repeatability, linearity, loading effect, system response-time delay. Errors in measurement, classification of errors. Transducers, transfer efficiency, primary and secondary transducers, electrical, mechanical, electronic transducers, advantages of each type transducers.

**Intermediate modifying and terminating devices:** Mechanical systems, inherent problems, electrical intermediate modifying devices, input circuitry, ballast circuit, electronic amplifiers. Terminating devices, Cathode ray oscilloscope, Oscillographs.

Module - 5

#### Force, Torque and Pressure Measurement:

Direct methods and indirect method, force measuring inst. Torque measuring inst., Types of dynamometers, Absorption dynamometer, Prony brake and rope brake dynamometer, and power measuring instruments. Pressure measurement, principle, use of elastic members, Bridgeman gauge, McLeod gauge, Pirani gauge.

#### Measurement of strain and temperature:

Theory of strain gauges, types, electrical resistance strain gauge, preparation and mounting of strain gauges, gauge factor, methods of strain measurement. Temperature Compensation, Wheatstone bridge circuit, orientation of strain gauges for force and torque, Strain gauge based load cells and torque sensors. Resistance thermometers, thermocouple, law of thermocouple, materials used for construction, pyrometer, optical pyrometer.

#### **Course outcomes:**

- Understand the objectives of metrology, methods of measurement, selection of measuring instruments, standards of measurement and calibration of end bars.
- Describe slip gauges, wringing of slip gauges and building of slip gauges, angle measurement using sine bar, sine center, angle gauges, optical instruments and straightness measurement using Autocollimator.
- Explain tolerance, limits of size, fits, geometric and position tolerances, gauges and their design.
- Understand the principle of Johnson Mikrokator, sigma comparator, dial indicator, LVDT, back pressure gauges, Solex comparators and Zeiss Ultra Optimeter
- Describe measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2 wire, 3 wire methods, screw thread gauges and tool maker's microscope.
- Explain measurement of tooth thickness using constant chord method, addendum comparator methods and base tangent method, composite error using gear roll tester and measurement of pitch, concentricity, run out and involute profile

- Understand laser interferometers and Coordinate measuring machines.
- Explain measurement systems, transducers, intermediate modifying devices and terminating devices.
- Describe functioning of force, torque, pressure, strain and temperature measuring devices.

### **TEXT BOOKS:**

- 1. Mechanical Measurements, Beckwith Marangoni and Lienhard, Pearson Education, 6th Ed., 2006.
- 2. Engineering Metrology, R.K. Jain, Khanna Publishers, Delhi, 2009.

#### **REFERENCE BOOKS**

- 1. Engineering Metrology and Measurements, Bentley, Pearson Education.
- 2. Theory and Design for Mechanical Measurements, III edition, Richard S Figliola, Donald E Beasley, WILEY India Publishers.

**Course outcomes:** 

- Acquire experimentation skills in the field of material testing.
- Develop theoretical understanding of the mechanical properties of materials by performing experiments.
- Apply the knowledge to analyze a material failure and determine the failure inducing agent/s.
- Apply the knowledge of testing methods in related areas.
- Know how to improve structure/behavior of materials for various industrial applications.

Course outcomes:

- To calibrate pressure gauge, thermocouple, LVDT, load cell, micrometer..
- To measure angle using Sine Center/Sine Bar/Bevel Protractor, alignment using Autocollimator/Roller set.
- To demonstrate measurements using Optical Projector/Tool maker microscope, Optical flats..
- To measure cutting tool forces using Lathe/Drill tool dynamometer..
- To measure Screw thread parameters using 2-Wire or 3-Wire method, gear tooth profile using gear tooth vernier/Gear tooth micrometer.
- To measure surface roughness using Tally Surf/ Mechanical Comparator.

Demonstration of formation of cutting parameters of single point cutting tool using bench grinder / tool & cutter grinder. Demonstration of surface milling /slot milling

**Course outcomes:** 

- Perform turning, facing, knurling, thread cutting, tapering, eccentric turning and allied operations, keyways / slots, grooves etc using shaper
- Perform gear tooth cutting using milling machine
- Understand the formation of cutting tool parameters of single point cutting tool using bench grinder / tool and cutter grinder, Surface Milling/Slot Milling
- Demonstrate precautions and safety norms followed in Machine Shop
- Exhibit interpersonal skills towards working in a team

#### Module - 5

**Cams:** Types of cams, types of followers. displacement, velocity and acceleration curves for uniform velocity, Simple Harmonic Motion, Uniform Acceleration, Retardation and Cycloidal motion.

Cam profiles: disc cam with reciprocating followers such as knife-edge, roller and flat-face followers, inline and offset.

Analysis of Cams: Analysis of arc cam with flat faced follower.

#### **Course outcomes:**

- 1. Identify mechanisms with basic understanding of motion.
- 2. Comprehend motion analysis of planar mechanisms, gears, gear trains and cams.
- 3. Carry out motion analysis of planar mechanisms, gears, gear trains and cams.

### **TEXT BOOKS:**

1. Rattan S.S, Theory of Machines, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 4<sup>th</sup> Edition, 2014.

2. Ambekar A. G., Mechanism and Machine Theory, PHI, 2009.

### **REFERENCE BOOKS**

Michael M Stanisic, Mechanisms and Machines-Kinematics, Dynamics and Synthesis, Cengage Learning, 2016.

2. Sadhu Singh, Theory of Machines, Pearson Education (Singapore)Pvt. Ltd, Indian Branch New Delhi, 2nd Edi. 2006.

## APPLIED THERMODYNAMICS B.E, IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| -                             | •                       |            |    |
|-------------------------------|-------------------------|------------|----|
| Course Code                   | 17ME43                  | CIE Marks  | 40 |
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |
|                               | Credits -               | - 04       |    |

**Course Objectives:** 

- To have a working knowledge of basic performance of Gas power cycles.
- To Calculate the forces exerted by a fluid at rest on submerged surfaces and understand the force of buoyancy
- To understand and evaluate the performance of steam power cycles their various Engineering applications
- To know how fuel burns and their thermodymic properties.
- To Understand mechanism of power transfer through belt, rope, chain and gear drives in I C Engines
- To determine performance parameters of refrigeration and air-conditioning systems.
- Evaluate the performance parameters of reciprocating air compressor as a function of receiver pressure.

### Module - 1

**Gas Power Cycles:**Air standard cycles; Carnot, Otto, Diesel, Dual and Stirling cycles, p-v and T -s diagrams, description, efficiencies and mean effective pressures. Comparison of Otto and Diesel cycles. Gas turbine (Brayton) cycle; description and analysis. Regenerative gas turbine cycle. Inter-cooling and reheating in gas turbine cycles. Jet propulsion: Introduction to the principles of jet propulsion,

#### Module - 2

**Vapour Power Cycles: Carnot**vapour power cycle, drawbacks as a reference cycle. Simple Rankine cycle; description, T-s diagram, analysis for performance. Comparison of Carnot and Rankine cycles. Effects of pressure and temperature on Rankine cycle performance. Actual vapour power cycles. Ideal and practical regenerative Rankine cycles, open and closed feed water heaters. Reheat Rankine cycle. Characteristics of an Ideal working fluid in Vapour power cycles, Binary Vapour cycles.

### Module - 3

**Combustion Thermodynamics**: Theoretical (Stoichiometric) air for combustion of fuels. Excess air, mass balance, Exhaust gas analysis, A/F ratio. Energy balance for a chemical reaction, enthalpy of formation, enthalpy and internal energy of combustion. Combustion efficiency. Dissociation and equilibrium, emissions.

**I.C.Engines:** Classification of IC engines, Combustion of SI engine and CI engine, Detonation and factors affecting detonation, Performance analysis of I.C Engines, heat balance, Morse test, IC Engine fuels, Ratings and Alternate Fuels.

| Module - 4  |  |  |  |  |
|---|--|--|--|--|
| <b>Refrigeration Cycles:</b> Vapour compression refrigeration system; description, analysis, refrigerating effect. Capacity, power required, units of refrigeration, COP, Refrigerants and their desirable properties, alternate Refrigerants. Any one case study on cold storage or industrial refrigerator. Air cycle refrigeration; reversed Carnot cycle, reversed Brayton cycle, Vapour absorption refrigeration system. Steam jet refrigeration.  |  |  |  |  |
| <b>Pscychrometrics and Air-conditioning Systems:</b> Properties of Atmospheric air, and Psychometric properties of Air, Psychometric Chart, Analyzing Air-conditioning Processes; Heating, Cooling, Dehumidification and Humidification, Evaporative Cooling. Adiabatic mixing of two moist air streams. Cooling towers.  |  |  |  |  |
| Module - 5  |  |  |  |  |
| <ul> <li>Reciprocating Compressors: Operation of a single stage reciprocating compressors. Work input through p-v diagram and steady state steady flow analysis. Effect of Clearance and Volumetric efficiency. Adiabatic, Isothermal and Mechanical efficiencies. Multi-stage compressor, saving in work, Optimum intermediate pressure, Inter-cooling, Minimum work for compression.</li> <li>Steam nozzles: Flow of steam through nozzles, Shape of nozzles, effect of friction, Critical pressure ratio, Supersaturated flow</li> </ul> |  |  |  |  |

**Course outcomes:** 

- Apply thermodynamic concepts to analyze the performance of gas power cycles including propulsion systems.
- Evaluate the performance of steam turbine components.
- Understand combustion of fuels and combustion processes in I C engines including alternate fuels and pollution effect on environment.
- Apply thermodynamic concepts to analyze turbo machines.
- Determine performance parameters of refrigeration and air-conditioning systems.
- Understand the principles and applications of refrigeration systems.
- Analyze air-conditioning processes using the principles of psychrometry and Evaluate cooling and heating loads in an airconditioning system.
- Understand the working, applications, relevance of air and identify methods for performance improvement.

# FLUID MECHANICS B.E, IV Semester, Mechanical Engineering

## [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME44                  | CIE Marks  | 40 |  |  |
|-------------------------------|-------------------------|------------|----|--|--|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |  |
|                               | Credits – 04            |            |    |  |  |

**Course Objectives:** 

• To have a working knowledge of the basic properties of fluids and understand the continuum approximation

- To Calculate the forces exerted by a fluid at rest on submerged surfaces and understand the force of buoyancy
- To understand the flow characteristic and dynamics of flow field for various Engineering applications
- To know how velocity changes and energy transfers in fluid flows are related to forces and torques and to understand why designing for minimum loss of energy in fluid flows is so important.
- To discuss the main properties of laminar and turbulent pipe flow and appreciate their differences and the concept of boundary layer theory.
- Understand the concept of dynamic similarity and how to apply it to experimental modeling
- To appreciate the consequences of compressibility in gas flow and understand the effects of friction and heat transfer on compressible flows

### Module - 1

**Basics**: Introduction, Properties of fluids-mass density, weight density, specific volume, specific gravity, viscosity, surface tension, capillarity, vapour pressure, compressibility and bulk modulus. Concept of continuum, types of fluids etc, pressure at a point in the static mass of fluid, variation of pressure, Pascal's law, Absolute, gauge, atmospheric and vacuum pressures pressure measurement by simple, differential manometers and mechanical gauges.

**Fluid Statics**: Totalpressure and center of pressure for horizontal plane, vertical plane surface and inclined plane surface submerged in static fluid. Buoyancy, center of buoyancy, meta center and meta centric heightits application in shipping, stability of floating bodies.

Module - 2

### Fluid Kinematics and Dynamics:

**Fluid Kinematics:** Types of Flow-steady, unsteady, uniform, non-uniform, laminar, turbulent, one,two and three dimensional, compressible, incompressible, rotational, irrotational, stram lines, path lines, streak lines, velocity components, convective and local acceleration, velocity potential, stream function, continuity equation in Cartesian co-ordinates. Rotation, vorticity and circulation, Laplace equation in velocity potential and Poisson equation in stream function, flow net, Problems.

### Fluid Dynamics:

Momentum equation, Impacts of jets- force on fixed and moving vanes, flat and curved. Numericals.Euler's equation, Integration of Euler's equation to obtain Bernoulli's equation, Bernoulli's theorem, Application of Bernoulli's theorem such as venturi meter, orifice meter, rectangular and triangular notch, pitot tube, orifices etc., related numericals.

### Module - 3

**Laminar and turbulent flow**: Reynods Number, Entrance flow and Developed flow, Navier-Stokes Equation (no derivation), Laminar flow between parallel plates, Poiseuille equation – velocity profile, Couette flow, Fully developed laminar flow in circular pipes, Hagen - Poiseuille

equation, related numericals.

Energy consideration in pipe flow, Loss of Pressure Head due to Fluid Friction, Darcy Weishach formula, major and minor losses in pipes, Commercial pipe, Colebrook equation, Moody equation/ diagram. Pipes in series, parallel, equivalent pipe, Related Numericals and simple pipe design problems.

#### Module - 4

Flow over bodies: Development of boundary layer, Prandtl's boundary layer equations, Blasius solution, laminar layer over a flat plate, boundary layer separation and its control.

Basic concept of Lift and Drag, Types of drag, Co-efficient of drag and lift, streamline body and bluff body, flow around circular bodies and airfoils, Lift and drag on airfoil, Numerical problems.

Dimensional analysis: Need for dimensional analysis, Dimensions and units, Dimensional Homogeneity and dimensionless ratios, methods of dimensional analysis, Rayleigh's method, Buckingham Pi theorem, Similitude and Model studies. Numerical problems

#### Module - 5

**Compressible Flows:** Introduction, thermodynamicrelations of perfect gases, internal energy andenthalpy, speed of sound, pressure field due to a moving source, basic Equations for one-dimensional flow, stagnation and sonic Properties, normal and oblique shocks. **Introduction to CFD**: Necessity, limitations, philosophy behind CFD, and applications.

### **Course outcomes:**

- Identify and calculate the key fluid properties used in the analysis of fluid behavior.
- Understand and apply the principles of pressure, buoyancy and floatation
- Apply the knowledge of fluid statics, kinematics and dynamics while addressing problems of mechanical and chemical engineering.
- Understand and apply the principles of fluid kinematics and dynamics.
- Understand the concept of boundary layer in fluid flow and apply dimensional analysis to form dimensionless numbers in terms of input output variables.
- Understand the basic concept of compressible flow and CFD

### **TEXT BOOKS:**

- 1. Fluid Mechanics (SI Units), Yunus A. Cengel John M.Cimbala, 3rd Ed., Tata
  - a. McGraw Hill, 2014.
- 2. Fluid Mechanics, F M White, McGraw Hill Publications Eighth edition. 2016
- 3. Mechanics of Fluids, Merle C. Potter, Devid C. Wiggerrt, Bassem H. Ramadan, Cengage learning, Fourth editions 2016.

- 1. Fundamentals of Fluid Mechanics by Munson, Young, Okiishi&Huebsch, John Wiley Publications.7<sup>th</sup> edition.
- 2. Fluid Mechanics, Pijush.K.Kundu, IRAM COCHEN, ELSEVIER, 3rd Ed. 2005.
- 3. Fluid Mechanics, John F.Douglas, Janul and M.Gasiosek and john A.Swaffield, Pearson Education Asia, 5th ed., 2006.
- 4. Introduction to Fluid Mechanics by Fox, McDonald, John Wiley Publications,8<sup>th</sup> edition.

## MACHINE TOOLS AND OPERATIONS B.E, III/IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME35 B / 45B          | CIE Marks  | 40 |
|-------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |
|                               | Credits -               | - 04       |    |

**Course Objectives:** 

- To introduce students to different machine tools in order to produce components having different shapes and sizes.
- To enrich the knowledge pertaining to relative motion and mechanics required for various machine tools.
- To develop the knowledge on mechanics of machining process and effect of various parameters on economics of machining.

Module - 1

MACHINE TOOLS

Introduction, Classification, construction and specifications of lathe, drilling machine, milling machine, boring machine, broaching machine, shaping machine, planing machine, grinding machine [Simple sketches showing major parts of the machines]

Module - 2

### MACHINING PROCESSES

Introduction, Types of motions in machining, turning and Boring, Shaping, Planing and Slotting, Thread cutting, Drilling and reaming, Milling, Broaching, Gear cutting and Grinding, Machining parameters and related quantities.

[Sketches pertaining to relative motions between tool and work piece only]

### Module - 3

### CUTTING TOOL MATERIALS, GEOMETRY AND SURFACE FINISH

Introduction, desirable Properties and Characteristics of cutting tool materials, cutting tool geometry, cutting fluids and its applications, surface finish, effect of machining parameters on surface finish.

Machining equations for cutting operations: Turning, Shaping, Planing, slab milling, cylindrical grinding and internal grinding, Numerical Problems

Module - 4

### MECHANICS OF MACHINING PROCESSES

Introduction, Chip formation, Orthogonal cutting, Merchants model for orthogonal cutting, Oblique cutting, Mechanics of turning process, Mechanics of milling process, Numerical problems.

Module - 5

**TOOL WEAR, TOOL LIFE:** Introduction, tool wear mechanism, tool wear equations, tool life equations, effect of process parameters on tool life, machinability, Numerical problems

**ECONOMICS OF MACHNING PROCESSES**: Introduction, choice of feed, choice of cutting speed, tool life for minimum cost and minimum production time, machining at maximum efficiency, Numerical problems

### **Course outcomes:**

• Explain the construction & specification of various machine tools.

- Describe various machining processes pertaining to relative motions between tool & work piece.
- Discuss different cutting tool materials, tool nomenclature & surface finish.
- Apply mechanics of machining process to evaluate machining time.
- Analyze tool wear mechanisms and equations to enhance tool life and minimize machining cost.

### TEXT BOOKS:

- 1. Fundamentals of metal cutting and Machine Tools, B.L. Juneja, G.S. Sekhon and Nitin Seth, New Age International Publishers 2<sup>nd</sup> Edition, 2003
- 2. All about Machine Tools, Heinrich Gerling, New Age International Publishers revised 2<sup>nd</sup> Edition, 2006

- 1. Fundamental of Machining and Machine Tools, Geoffrey Boothroyd and Winston A. Knight, CRC Taylor& Francis, Third Edition.
- 2. Metal cutting principles, Milton C. Shaw, Oxford University Press, Second Edition, 2005.

## COMPUTER AIDED MACHINE DRAWING B.E, III/IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code           | 17ME36 A / 46A          | CIE Marks  | 40 |
|-----------------------|-------------------------|------------|----|
| Number of Hours/Week  | 05                      | SEE Marks  | 60 |
| Total Number of Hours | 50(10 Hours per Module) | Exam Hours | 03 |
|                       | Credits -               | - 03       |    |

**Course Objectives:** 

- To acquire the knowledge of CAD software and its features.
- To inculcate understanding of the theory of projection and make drawings using orthographic projections and sectional views
- To familiarize the students with Indian Standardson drawing practices.
- To impart knowledge of thread forms, fasteners, keys, joints and couplings.
- To make the students understand and interpret drawings of machine components so as to prepare assembly drawings either manually and using CAD packages.
- To acquire the knowledge of limits, tolerances and fitspertaining to machine drawings.

| PART A   |            |
|--|------------|
| INTRODUCTION TO COMPUTER AIDED SKETCHING   |            |
| Review of graphic interface of the software. Review of basic sketching commands and navigational commands.   | 2          |
| Hours  |            |
| Sections of Solids: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems  | on, axis   |
| inclinations, spheres and hollow solids), True shape of section.   | 4 Hours    |
| Orthographic views: Conversion of pictorial views into orthographic projections of simple machine parts with or without section. (   | Bureau of  |
| Indian Standards conventions are to be followed for the drawings), Hidden line conventions, Precedence of lines.   | 4 Hours    |
| Thread forms: Thread terminology, sectional views of threads. ISO Metric (Internal & External), BSW (Internal and External), square, Sellers thread, American Standard thread. | Acme and   |
| Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple asse   | mbly using |
| stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen  | screw.     |
| 8 Hours  |            |
| PART B   |            |
| Keys and Joints: Parallel, Taper, Feather Key, Gib head key and Woodruff key   |            |
| Riveted joints: Single and double riveted lap joints, Butt joints with single/double cover straps (Chain and zigzag using snap head rive                                       | eters).    |
| Joints:Cotter joint (socket and spigot), Knuckle joint (pin joint) for two rods.8 Hours  |            |
| <b>Couplings:</b> Split muff coupling, Protected type flange coupling, Pin (bush) type flexible coupling, Oldham's coupling and Universal coupling (Hook's Joint).             | upling     |
|  | 6 Hours    |

| PART C  |          |
|---|----------|
| Limits, Fits and Tolerances: Introduction, Fundamental tolerances, Deviations, Methods of placing limit dimensions, Types of fits with sy | mbols    |
| and applications, Geometrical tolerances on drawings, Standards followed in industry.   |          |
| 3 Hours   |          |
| Assembly Drawings: (Part drawings shall be given)   |          |
| 1. Plummer block (Pedestal Bearing)   |          |
| 2. Rams Bottom Safety Valve   |          |
| 3. I.C. Engine connecting rod   |          |
| 4. Screw jack (Bottle type)   |          |
| 5. Tailstock of lathe   |          |
| 6. Machine vice   |          |
| 7.Lathe square tool post  | 15 Hours |
|   |          |
| Course outcomes:  |          |

- Sections of pyramids, prisms, cubes, cones and cylinders resting on their bases in 2D
- Orthographic views of machine parts with and without sectioning in 2D.
- Sectional views for threads with terminologies of ISO Metric, BSW, square and acme, sellers and American standard threads in 2D.
- Hexagonal and square headed bolt and nut with washer, stud bolts with nut and lock nut, flanged nut, slotted nut, taper and split pin for locking counter sunk head screw, grub screw, Allen screw assemblies in 2D
- Parallel key, Taper key, and Woodruff Key as per the ISO standards in 2D
- single and double riveted lap joints, butt joints with single/double cover straps, cotter and knuckle joint for two rods in 2D
- Sketch split muff, protected type flanged, pin type flexible, Oldham's and universal couplings in 2D
- assemblies from the part drawings with limits ,fits and tolerance given for Plummer block, Ram bottom safety valve, I.C. Engine connecting rod, Screw Jack, Tailstock of lathe, Machine Vice and Lathe square tool post in 2D and 3D

#### **TEXT BOOKS:**

- 1. 'A Primer on Computer Aided Machine Drawing-2007', Published by VTU, Belgaum.
- 2. 'Machine Drawing', N.D.Bhat&V.M.Panchal, Published by Charotar Publishing House, 1999.
- 3. 'Machine Drawing', N.Siddeshwar, P.Kannaih, V.V.S. Sastri, published by Tata Mc.Grawhill, 2006.

#### **REFERENCE BOOKS**

- 1. "A Text Book of Computer Aided Machine Drawing", S. Trymbakaa Murthy, CBS Publishers, New Delhi, 2007.
- 2. 'Machine Drawing', K.R. Gopala Krishna, Subhash publication.

### **Internal Assessment: 20 Marks**

Sketches shall be in sketch books and drawing shall through use of software on A3/A4 sheets. Sketch book and all the drawing printouts shall be submitted.

### Scheme of Evaluation for Internal Assessment (40 Marks)

- (a) Class work (Sketching and Computer Aided Machine drawing printouts in A4/A3 size sheets): 20 Marks.
- (b) Internal Assessment test in the same pattern as that of the main examination: 20 marks.

### Scheme of Examination:

Two guestions to be set from each Part A, part B and Part C.

Student has to answer one question each from Part A, Part B for 15 marks each and one question from Part C for 50 marks.

Part A 1 x 25 = 25 Marks

- = 25 Marks Part B 1 x 25
- Part C 1 x 50 = 50 Marks Total
  - = 100 Marks

### INSTRUCTION FOR COMPUTER AIDED MACHINE DRAWING (15ME36A/46A) EXAMINATION

- 1. No restriction of timing for sketching/ computerization of solutions. The total duration is 3 hours.
- 2. It is desirable to do sketching of all the solutions before computerization.
- 3. Drawing instruments may be used for sketching.
- 4. For Part A and Part B, 2D drafting environment should be used.
- 5. For Part C 3D part environment should be used for parts assembly drawing and extract 2D views.

## MECHANICAL MEASUREMENTS AND METROLOGY B.E, IV Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                     | 17ME36B / 46B | CIE Marks  | 40 |
|---------------------------------|---------------|------------|----|
| Number of Lecture<br>Hours/Week | 03            | SEE Marks  | 60 |
| Total Number of Lecture Hours   | 40            | Exam Hours | 03 |
| Credits – 03                    |               |            |    |

**Course Objectives:** 

- Understand metrology, its advancements & measuring instruments,
- Acquire knowledge on different standards of length, calibration of End Bars, linear and angular measurements, Screw thread and gear measurement & comparators.
- Equip with knowledge of limits, fits, tolerances and gauging.
- Acquire knowledge of measurement systems and methods with emphasis on different transducers, intermediate modifying and terminating devices.
- Understand the measurement of Force, Torque, Pressure, Temperature and Strain.

### MODULE 1

**Introduction to Metrology:** Definition, objectives and concept of metrology, Need of inspection, Principles, process, methods of measurement, Classification and selection of measuring instruments and systems. Accuracy, precision and errors in measurement. System of measurement, Material Standard, Wavelength Standards, Subdivision of standards, Line and End standards, Classification of standards and Traceability, calibration of End bars(Numerical problems), standardization.

#### Linear Measurement and angular measurements:

Slip gauges- Indian standards on slip gauge, method of selection of slip gauge, stack of slip gauge, adjustable slip gauge, wringing of slip gauge, care of slip gauge, slip gauge accessories, problems on building of slip gauges (M87, M112).

Measurement of angles- sine bar, sine center, angle gauges, optical instruments for angular measurements, Auto collimator-applications for measuring straightness and squareness.

#### **MODULE 2**

### System of Limits, Fits, Tolerance and Gauging:

Definition of tolerance, Specification in assembly, Principle of interchangeability and selective assembly, limits of size, Indian standards, concept of limits of size and tolerances, definition of fits, hole basis system, shaft basis system, types of fits and their designation (IS 919-1963), geometric tolerance, position-tolerances.

Classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge and gauge materials.

**Comparators:** 

Functional requirements, classification, mechanical- Johnson Mikrokator, sigma comparators, dial indicator, electrical- principles, , LVDT, Pneumatic- back pressure gauges, solex comparators and optical comparators- Zeiss ultra-optimeter.

MODULE 3

#### Measurement of screw thread and gear:

Terminology of screw threads, measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2wire and 3- wire methods, best size wire. Screw thread gauges, Tool maker's microscope.

Gear tooth terminology, tooth thickness measurement using constant chord method, addendum comparator method and base tangent method, measurement of pitch, concentricity, run out, and involute profile. Gear roll tester for composite error.

### Advances in metrology:

Basic concepts of lasers, advantages of lasers, laser interferometers, types, applications. Basic concepts of Coordinate Measuring Machinesconstructional features, applications.

### MODULE 4

### Measurement systems and basic concepts of measurement methods:

Definition, significance of measurement, generalized measurement system, definitions and concept of accuracy, precision, calibration, threshold, sensitivity, hysteresis, repeatability, linearity, loading effect, system response-time delay. Errors in measurement, classification of errors. Transducers, transfer efficiency, primary and secondary transducers, electrical, mechanical, electronic transducers, advantages of each type transducers.

Intermediate modifying and terminating devices: Mechanical systems, inherent problems, electrical intermediate modifying devices, input circuitry, ballast circuit, electronic amplifiers. Terminating devices, Cathode ray oscilloscope, Oscillographs.

#### **MODULE 5**

### Force, Torque and Pressure Measurement:

Direct methods and indirect method, force measuring inst. Torque measuring inst., Types of dynamometers, Absorption dynamometer, Prony brake and rope brake dynamometer, and power measuring instruments. Pressure measurement, principle, use of elastic members, Bridgeman gauge, McLeod gauge, Pirani gauge.

### Measurement of strain and temperature:

Theory of strain gauges, types, electrical resistance strain gauge, preparation and mounting of strain gauges, gauge factor, methods of strain measurement. Temperature Compensation, Wheatstone bridge circuit, orientation of strain gauges for force and torque, Strain gauge based load cells and torque sensors.

Resistance thermometers, thermocouple, law of thermocouple, materials used for construction, pyrometer, optical pyrometer.

**Course outcomes:** 

- Understand the objectives of metrology, methods of measurement, selection of measuring instruments, standards of measurement and calibration of end bars.
- Describe slip gauges, wringing of slip gauges and building of slip gauges, angle measurement using sine bar, sine center, angle gauges, optical instruments and straightness measurement using Autocollimator.
- Explain tolerance, limits of size, fits, geometric and position tolerances, gauges and their design.
- Understand the principle of Johnson Mikrokator, sigma comparator, dial indicator, LVDT, back pressure gauges, Solex comparators and Zeiss Ultra Optimeter.
- Describe measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2 wire, 3 wire methods, screw thread gauges and tool maker's microscope.

- Explain measurement of tooth thickness using constant chord method, addendum comparator methods and base tangent method, composite error using gear roll tester and measurement of pitch, concentricity, run out and involute profile.
- Understand laser interferometers and Coordinate measuring machines.
- Explain measurement systems, transducers, intermediate modifying devices and terminating devices.
- Describe functioning of force, torque, pressure, strain and temperature measuring devices.

6. Fatigue Test (demonstration only).

### **Course outcomes:**

- Acquire experimentation skills in the field of material testing.
- Develop theoretical understanding of the mechanical properties of materials by performing experiments.
- Apply the knowledge to analyze a material failure and determine the failure inducing agent/s.
- Apply the knowledge of testing methods in related areas.
- Know how to improve structure/behavior of materials for various industrial applications.

| 6.     | -                               | hness, Using Tally Surf/Mechanical Com         | -                    |        |
| 7.     |                                 | ofile using gear tooth Vernier /Gear too       | in micrometer        |        |
| 8.     | Calibration of Micrometer usin  |  |                      |        |
| 9.     | Measurement using Optical Fla   | LS   |                      |        |

Course outcomes:

- To calibrate pressure gauge, thermocouple, LVDT, load cell, micrometer.
- To measure angle using Sine Center/ Sine Bar/ Bevel Protractor, alignment using Autocollimator/ Roller set.
- To demonstrate measurements using Optical Projector/Tool maker microscope, Optical flats.
- To measure cutting tool forces using Lathe/Drill tool dynamometer.
- To measure Screw thread parameters using 2-Wire or 3-Wire method, gear tooth profile using gear tooth vernier/Gear tooth micrometer.
- To measure surface roughness using Tally Surf/ Mechanical Comparator.

| Credits – 04                         |                         |            |    |

**Course Objectives:** 

- Examine the meaning, importance, nature of management, its difference between management and administration and role of managers in management.
- Examine the meaning characteristics principles and process of organizing.
- Describe effective communication process, its importance, types and purpose for running an organization.
- Explain the importance of engineering economics, Law of demand and supply in engineering decision making.
- Describe various interest rate factors and implement the same for economic decision making.
- Examine different economic analysis methods-NPW, EAW, IRR, FW for decision making.
- Discuss different component of costs and methods of cost estimation.
- Explain depreciation, different methods of computing depreciation.
- Discuss taxation concepts-income tax and corporate taxes.

Module - 1

**Management:** Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as ascience, art of profession - Management & Administration - Roles of Management, Levels of Management, Development of Management Thought-early management approaches – Modern management approaches.

**Planning:** Nature, importance and purpose of planning process Objectives -Types of plans (Meaning Only) - Decision making Importance of planning -steps in planning & planning premises - Hierarchy of plans.

|   | Module - 2  |
|---|---|
| Centralization Vs I                             | <b>Staffing:</b> Nature and purpose of organization Principles oforganization - Types of organization - Departmentation Committees-<br>Decentralization of authority and responsibility - Span ofcontrol - MBO and MBE (Meaning Only) Nature and importance of<br>of Selection & Recruitment (in brief).  |
| coordination, mean                              | rolling: Meaning and nature of directing Leadershipstyles, Motivation Theories, Communication - Meaning and importance -<br>ing and importance and Techniques of Co Ordination. Meaning and steps in controlling - Essentials of a sound control system -<br>shing control (in brief)   |
|   | Module - 3  |
| & Macroeconomics<br>Law of Returns, In          | ineering and economics, Problem solving and decision making, Laws of demand and supply, Difference between Microeconomics s, equilibrium between demand & supply, elasticity of demand, price elasticity, income elasticity.<br>Interest and interest factors, simple and compound interest, Cash flow diagrams, personal loans and EMI payment calculation with es, Discussion and problems  |
|   | Module - 4  |
| infinites lives, futur<br>Asset life, Rate of r | d annual worth and rate of returns: Basic present worth comparisons, Present worth-equivalence, Assets with unequal lives and re worth comparisons, payback comparisons, Equivalent annual worth comparisons, situations for annual worth comparisons.<br>return, minimum acceptable rate of return, IRR anomalies and misconceptions, Cost of capital, comparisons of all present future with IRR, product costing, Discussions and problems<br>Module - 5 |
| Costing and denre                               | eciation: Components of costs, estimation of selling price, marginal cost, first cost, all kinds of overheads, indirect cost estimation   |
|   | mensuration and estimation of material cost, cost estimation of mechanical process, idling time.  |
|   | pproaches to product costing), causes of depreciation, methods of computing depreciation charges, straight line method, declining<br>on of years method, sinking fund method, service output methods, taxation concepts, personal income taxes and corporate taxes,<br>oblems   |
| Course outcomes:                                |   |
| On completion                                   | of this subject students will be able to  |
| 1. Exp  | lain the development of management and the role it plays at different levels in an organization.  |
| 2. Con  | nprehend the process and role of effective planning, organizing and staffing for the development of an organization.  |
|   | lerstand the necessity of good leadership, communication and coordination for establishing effective control in an anization.   |
| 4. Und  | lerstand engineering economics demand supply and its importance in economics decision making and problem solving.   |
|   | culate present worth, annual worth and IRR for different alternatives in economic decision making.  |
| 6. Und  | lerstand the procedure involved in estimation of cost for a simple component, product costing and depreciation, its hods.   |
|   | 40  |

## DYNAMICS OF MACHINERY B.E, VSemester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                          | 17ME52                  | CIE Marks  | 40 |  |
|--------------------------------------|-------------------------|------------|----|--|
| Number of Lecture Hours/Week         | 04                      | SEE Marks  | 60 |  |
| <b>Total Number of Lecture Hours</b> | 50(10 Hours per Module) | Exam Hours | 03 |  |
| Credits – 04                         |                         |            |    |  |

**Course Objectives:** 

- 1. To gain the knowledge static and dynamic equilibrium conditions of mechanisms subjected forces and couple, with and without friction.
- 2. Analyze the mechanisms for static and dynamic equilibrium.
- 3. To understand the balancing principles of rotating and reciprocating masses, governors and gyroscopes.
- 4. Analyze the balancing of rotating and reciprocating masses, governors and gyroscopes.
- 5. To understand vibrations characteristics of single degree of freedom systems.
- 6. Characterize the single degree freedom systems subjected to free and forced vibrations with and without damping.

Module - 1

**Static force Analysis:** Static equilibrium. Equilibrium of two and three force members. Members with two forces and torque, Free body diagrams, Static force analysis of four bar mechanism and Slider-crank mechanism with and without friction.

**Dynamic force Analysis: D** 'Alembert's principle, Inertia force, Inertia torque. Dynamic force analysis of four-bar mechanism and Slider crank mechanism without friction, numerical problems.

Module - 2

**Balancing of Rotating Masses**: Static and dynamic balancing, balancing of single rotating mass by balancing masses in same plane and in different planes. Balancing of several rotating masses by balancing masses in same plane and in different planes.

**Balancing of Reciprocating Masses:** Inertia effect of crank and connecting rod, Single cylinder engine, balancing in multi cylinder-inline engine (primary and secondary forces), numerical problems.

Module - 3

**Governors:** Types of governors, force analysis of Porter and Hartnell governors. Controlling force, Stability, Sensitiveness, Isochronism, Effort and Power.

**Gyroscope**: Vectorial representation of angular motion, Gyroscopic couple. Effect of gyroscopic couple on plane disc, aeroplane, ship, stability of two wheelers and four wheelers, numerical problems.

|         | Module - 4  |
|---------|---|
| Introdu | action &Undamped free Vibrations (Single Degree of Freedom)   |
| • 1     | of vibrations, Definitions, Simple Harmonic Motion (SHM), Work done by harmonic force, Principle of super position applied to SHM is of analysis – (Newton's, Energy & Rayleigh's methods). Derivations for spring mass systems, Natural frequencies of simple systems. |
|         | in series and parallel, Torsional and transverse vibrations, Effect of mass of spring and problems.   |
|         | Module - 5  |
| Dampe   | d free Vibrations (Single Degree of Freedom)  |
|         | of damping, Analysis with viscous damping - Derivations for over, critical and under damped systems, Logarithmic decrement and numerical  |
| problem |   |
|         | Vibrations (Single Degree of Freedom):  |
| -       | s of forced vibration with constant harmonic excitation, Magnification factor (M.F.), Vibration isolation - Transmissibility ratio, Excitation of   |
| support | (absolute and relative), Numerical problems.  |
| ~       |   |
| Course  | outcomes:   |
|         | Determine the forces and couples for static and dynamic conditions of four bar and slider crank mechanisms to keep the system in  |
|         | equilibrium.  |
|         | Determine magnitude and angular position of balancing masses under static and dynamic condition of rotating masses in same and different planes.  |
| 3.      | Determine unbalanced primary, secondary forces and couples in single and multi-cylinder engine.   |
| 4.      | Determine sensitiveness, isochronism, effort and power of porter and hartnell governors.  |
| 5.      | Determine gyroscopic couple and effects related to 2, 4 wheeler, plane disc, ship and aeroplanes.   |
| 6.      | Understand types of vibration, SHM and methods of finding natural frequencies of simple mechanical systems.   |
|         | Determine equation of motion, natural frequency, damping factor, logarithmic decrement of damped free vibration (SDOF) systems.<br>Determine the natural frequency, force and motion transmissibility of single degree freedom systems.                                 |

9. Determine equation of motion of rotating and reciprocating unbalance systems, magnification factor, and transmissibility of forced vibration (SDOF) systems.

- 4. Mechanical Vibrations, G. K.Grover, Nem Chand and Bros.

- 1. Theory of Machines, Rattan S.S. Tata McGraw Hill Publishing Company Ltd., New Delhi, 3<sup>rd</sup> Edition, 2009.
- 2. Mechanical Vibrations, S. S. Rao, Pearson Education Inc, 4edition, 2003.

## TURBO MACHINES B.E, VSemester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME53                  | CIE Marks  | 40 |
|-------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |
| Credits – 04                  |                         |            |    |

**Course Objectives:** 

- The course aims at giving an overview of different types of turbomachinery used for energy transformation, such as pumps, fans, compressors, as well as hydraulic and steam turbines.
- Explain the working principles of turbomachines and apply it to various types of machines
- It will focus on application of turbo machinery in power generation, power absorption and transportation sectors.

Module - 1

**Introduction**: Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynolds number, Unit and specific quantities, model studies.

(Note: Since dimensional analysis is covered in Fluid Mechanics subject, questions on dimensional analysis may not be given. However, dimensional parameters and model studies may be given more weightage.)

**Thermodynamics of fluid flow**: Application of first and second law of thermodynamics to turbo machines, Efficiencies of turbo machines, Static and Stagnation states, Incompressible fluids and perfect gases, overall isentropic efficiency, stage efficiency (their comparison) and polytropic efficiency for both compression and expansion processes. Reheat factor for expansion process

Module - 2 Energy exchange in Turbo machines: Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.

**General Analysis of Turbo machines**: Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, Theoretical head – capacity relationship, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, Problems.

Module - 3

**Steam Turbines**: Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor.

Reaction turbine – Parsons's turbine, condition for maximum utilization factor, reaction staging. Problems.

 Module - 4

 Hydraulic Turbines: Classification, various efficiencies.Pelton turbine – velocity triangles, design parameters, Maximum efficiency.

 Francis turbine - velocity triangles, design parameters, runner shapes for different blade speeds. Draft tubes- Types and functions. Kaplan and Propeller turbines - velocity triangles, design parameters. Problems.

 Module - 5

 Centrifugal Pumps: Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Maximum suction lift, Net positive suction head, Cavitation, Need for priming, Pumps in series and parallel. Problems.

**Centrifugal Compressors**: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency and surging and problems. Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies and stalling. Problems.

**Course outcomes:** 

- Able to give precise definition of turbomachinery
- Identify various types of turbo machinery
- Apply the Euler's equation for turbomachinery to analyse energy transfer in turbomachines
- Understand the principle of operation of pumps, fans, compressors and turbines.
- Perform the preliminary design of turbomachines (pumps, rotary compressors and turbines)
- Analyze the performance of turbo machinery.

## **TEXT BOOKS:**

- 1. An Introduction to Energy Conversion, Volume III, Turbo machinery, V. Kadambi and Manohar Prasad, New Age International Publishers, reprint 2008.
- 2. Turbo Machines ,B.U.Pai , 1st Editions, Wiley India Pvt, Ltd.
- 3. Turbines, Compressors & Fans, S. M. Yahya, Tata McGraw Hill Co. Ltd., 2nd edition, 2002

- 1. Principals of Turbo machines, D. G. Shepherd, The Macmillan Company (1964).
- 2. Fluid Mechanics & Thermodynamics of Turbo machines, S. L. Dixon, Elsevier (2005).
- 3. Text Book of Turbo machines, M. S. Govindegouda and A. M. Nagaraj, M. M. Publications, 4Th Ed, 2008.

## DESIGN OF MACHINE ELEMENTS – I B.E, V Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME54                  | CIE Marks  | 40 |  |
|-------------------------------|-------------------------|------------|----|--|
|                               | 1/101234                |            | 40 |  |
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |
| Credits – 04                  |                         |            |    |  |
|                               |                         |            |    |  |

**Course Objectives:** 

- 1. Able to understand mechanical design procedure, materials, codes and use of standards
- 2. Able to design machine components for static, impact and fatigue strength.
- 3. Able to design fasteners, shafts, joints, couplings, keys, threaded fasteners riveted joints, welded joints and power screws.

Module - 1

### **Fundamentals of Mechanical Engineering Design**

Mechanical engineering design, Phases of design process, Design considerations, Engineering Materials and their Mechanical properties, Standards and Codes, Factor of safety, Material selection.

Static Stresses: Static loads.Normal, Bending, Shear andCombinedstresses. Theories of failure. Stress concentration and determination of stress concentration factor.

### Module - 2

### **Design for Impact and Fatigue Loads**

Impact stress due to Axial, Bending and Torsional loads.

Fatigue failure: Endurance limit, S-N Diagram, Low cycle fatigue, High cycle fatigue, modifying factors: size effect, surface effect. Stress concentration effects, Notch sensitivity, fluctuating stresses, Goodman and Soderberg relationship, stresses due to combined loading, cumulative fatigue damage. Module - 3

Design of Shafts, Joints, Couplings and Keys

Torsion of shafts, design for strength and rigidity with steady loading, ASME codes for power transmission shafting, shafts under combined loads. Design of Cotter and Knuckle joints, Rigid and flexible couplings, Flange coupling, Bush and Pin type coupling and Oldham's coupling. Design of keys-square, saddle, flat and father.

Module - 4

### **Riveted Joints and Weld Joints**

Rivet types, rivet materials, failures of riveted joints, Joint Efficiency, Boiler Joints, Lozanze Joints, Riveted Brackets, eccentrically loaded joints. Types of welded joints, Strength of butt and fillet welds, welded brackets with transverse and parallel fillet welds, eccentrically loaded welded joints.

| Module - 5   |  |  |
|--|--|--|
| Threaded Fasteners and Power Screws  |  |  |
| Stresses in threaded fasteners, Effect of initial tension, Design of threaded fasteners under static loads, Design of eccentrically loaded bolted joints |  |  |
| Γypes of power screws, efficiency and self-locking, Design of power screw, Design of screw jack: (Complete Design).                                      |  |  |
|  |  |  |
| Course outcomes:   |  |  |
| 1. Describe the design process, choose materials.  |  |  |
| 2. Apply the codes and standards in design process.  |  |  |
| 3. Analyze the behavior of machine components under static, impact, fatigue loading using failure theories.  |  |  |
| 4. Design shafts, joints, couplings.   |  |  |
| 5. Design of riveted and welded joints.  |  |  |
| 6. Design of threaded fasteners and power screws   |  |  |
|  |  |  |

**Air-Conditioning**: Basic Processes in Conditioning of Air, Psychrometric Processes in Air-Conditioning Equipment, Simple Air-Conditioning /system and State and Mass Rate of Supply Air, Summer Air Conditioning, Winter Air Conditioning.

**Loading Calculation and Applied Psychometrics :**Preliminary Considerations, Internal Hear Gains, System Heat Gains, Break-up of Ventilation Load and Effective Sensible Heat Factor, Cooling Load Estimate. Psychrometric Calculations for Cooling, Selection of Air-Conditioning Apparatus for Cooling and Dehumidification, Building Requirements and Energy Conservation in Air Conditioned Buildings.

Transport air conditioning Systems: Air conditioning systems for automobiles (cars, buses etc.), Air conditioning systems for trains, Air conditioning systems for ships.

**Course outcomes:** 

- 1. Illustrate the principles, nomenclature and applications of refrigeration systems.
- 2. Explainvapor compression refrigeration system and identify methods for performance improvement
- 3. Study the working principles of air, vapor absorption, thermoelectric and steam-jet and thermo-acoustic refrigeration systems
- 4. Estimate the performance of air-conditioning systems using the principles of psychometry.
- 5. Compute and Interpret cooling and heating loads in an air-conditioning system
- 6. Identify suitable refrigerant for various refrigerating systems

#### THEORY OF ELASTICITY **B.E.** V Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme] **Course Code** 17ME552 **CIE Marks** 40 Number of Lecture Hours/Week 03 **SEE Marks** 60 **Total Number of Lecture Hours** 40 (8Hours per Module) Exam Hours 03 Credits – 03 **Course Objectives:** 1. To gain knowledge of stresses and strains in 3D and their relations and thermal stresses. To understand the 2D analysis of elastic structural members. To gain knowledge of thermal stresses and stability of columns 4. To analysis elastic members for the stresses and strains induced under direct loading conditions. To analyse the axisymmetric and torsional members. To analyse the thermal stresses induced in disks and cylinders. 7. To analyse the stability of columns Module - 1 Analysis of Stress: Definition and notation of stress, equations of equilibrium in differential form, stress components on an arbitrary plane, equality of cross shear, stress invariants, principal stresses, octahedral stress, planes of maximum shear, stress transformation, plane state of stress, Numerical problems Module - 2 Analysis of Strain: Displacement field, strains in term of displacement field, infinitesimal strain at a point, engineering shear strains, strain invariants, principal strains, octahedral strains, plane state of strain, compatibility equations, strain transformation, Numerical Problems. Module - 3 Two-Dimensional classical elasticity Problems: Cartesian co-ordinates - Relation between plane stress and plane strain, stress functions for plane stress and plane strain state, Airy's stress functions, Investigation of Airy's stress function for simple beams, bending of a narrow cantilever beam of rectangular cross section under edge load. Bending of simply supported beam under UDL.General equations in polar coordinates, stress distribution symmetrical about an axis, Thick wall cylinder subjected to internal and external pressures, Numerical Problems. Module - 4 Axisymmetric and Torsion problems: Stresses in rotating discs of uniform thickness and cylinders. Torsion of circular, elliptical and triangular bars, Prandtl's membrane analogy, torsion of thin walled thin tubes, torsion of thin walled multiple cell closed sections. Numerical Problems

3.

5.

6.

# Module - 5 Thermal stress and Elastic stability: Thermo elastic stress strain relations, equations of equilibrium, thermal stresses in thin circular discs and in long circularcylinders. Euler's column buckling load: clamped-free, clamped-hinged, clamped-clamped and pin-ended, Numerical Problems

**Course outcomes:** 

- 1. Describe the state of stress and strain in 2D and 3D elastic members subjected to direct loads and thermal loads.
- 2. Analyse the structural members: beam, rotating disks, columns.
- 3. Analyse the torsional rigidity of circular and non-circular sections.
- 4. Analyse the stability of columns.

**Course outcomes:** 

- 1. Understand the importance, functions and principles Human Resource Management and process of Job analysis
- 2. Summarize the objectives of Human Resource planning, Recruitment and selection process
- 3. Understand the process involved in Placement, Training and development activities.
- 4. Understand the characteristics of an effective appraisal system and compensation planning.
- 5. Understand the issues related to employee welfare, grievances and discipline.

## **TEXT BOOKS:**

| <b>Total Number of Lecture Hours</b> | 40 (8Hours per Module) | Exam Hours | 03 |  |  |  |
| Credits – 03                         |                        |            |    |  |  |  |
| Module - 1                           |                        |            |    |  |  |  |

## **INTRODUCTION**

Introduction to Non-traditional machining, Need for Non-traditional machining process, Comparison between traditional and non-traditional

machining, general classification Non-traditional machining processes, classification based on nature of energy employed in machining, selection of non-traditional machining processes, Specific advantages, limitations and applications of non-traditional machining processes.

Module - 2

**Ultrasonic Machining (USM):** Introduction, Equipment and material process, Effect of process parameters: Effect of amplitude and frequency, Effect of abrasive grain diameter, effect of slurry, tool & work material. Process characteristics: Material removal rate, tool wear, accuracy, surface finish, applications, advantages & limitations of USM.

Abrasive Jet Machining (AJM): Introduction, Equipment and process of material removal, process variables: carrier gas, type of abrasive, work material, stand-off distance (SOD).Process characteristics-Material removal rate, Nozzle wear, accuracy & surface finish.Applications, advantages & limitations of AJM.

Water Jet Machining (WJM): Equipment & process, Operation, applications, advantages and limitations of WJM.

Module - 3

# ELECTROCHEMICAL MACHINING (ECM)

Introduction, Principle of electro chemical machining: ECM equipment, elements of ECM operation, Chemistry of ECM. ECM Process characteristics: Material removal rate, accuracy, surface finish.

Process parameters: Current density, Tool feed rate, Gap between tool & work piece, velocity of electrolyte flow, type of electrolyte, its concentration temperature, and choice of electrolytes. ECM Tooling: ECM tooling technique & example, Tool & insulation materials. Applications ECM: Electrochemical grinding and electrochemical honing process. Advantages, disadvantages and application of ECG, ECH. **CHEMICAL MACHINING (CHM)** 

Elements of the process: Resists (maskants), Etchants. Types of chemical machining process-chemical blanking process, chemical milling process. Process characteristics of CHM: material removal rate, accuracy, surface finish, advantages, limitations and applications of chemical machining process.

# ELECTRICAL DISCHARGE MACHINING (EDM)

Introduction, mechanism of metal removal, EDM equipment: spark erosion generator (relaxation type), dielectric medium-its functions & desirable properties, electrode feed control system. Flushing types; pressure flushing, suction flushing, side flushing, pulsed flushing. EDM process parameters: Spark frequency, current & spark gap, surface finish, Heat Affected Zone. Advantages, limitations & applications of EDM, Electrical discharge grinding, Traveling wire EDM.

# PLASMA ARC MACHINING (PAM)

Introduction, non-thermal generation of plasma, equipment mechanism of metal removal, Plasma torch, process parameters, process characteristics. Safety precautions. Safety precautions, applications, advantages and limitations.

Module - 5

## LASER BEAM MACHINING (LBM)

Introduction, generation of LASER, Equipment and mechanism of metal removal, LBM parameters and characteristics, Applications, Advantages & limitations.

# ELECTRON BEAM MACHINING (EBM)

Introduction, Principle, equipment and mechanism of metal removal, applications, advantages and limitations.

**Course outcomes:** 

- 1. Understand the compare traditional and non-traditional machining processand recognize the need for Non-traditional machining process.
- 2. Understand the constructional features, performance parameters, process characteristics, applications, advantages and limitations of USM, AJM and WJM.
- **3.** Identify the need of Chemical and electro-chemical machining process along with the constructional features, process parameters, process characteristics, applications, advantages and limitations.
- 4. Understand the constructional feature of the equipment, process parameters, process characteristics, applications, advantages and limitations EDM & PAM.
- 5. Understand the LBM equipment, LBM parameters, and characteristics. EBM equipment and mechanism of metal removal, applications, advantages and limitations LBM & EBM.

### **TEXT BOOKS:**

Simplex Method – Phase I and Phase II of the Simplex Method, The Revised Simplex method, Primal and Dual Simplex Method, Big –M method.

|         | Module - 3  |
|---------|---|
| Trans   | portation Problem   |
|         | g initial basic feasible solution by north – west corner rule, least cost method and Vogel's approximation method – testing for optimality of   |
|         | ed transportation problems. (Including assignment and travelling salesman problems) (No degeneracy problems)  |
| Queui   |   |
|         | ng Models : Essential features of queuing systems, operating characteristics of queuing system, probability distribution in queuing systems,  |
| classif | ication of queuing models, solution of queuing M/M/1 : $\infty$ /FCFS,M/M/1 : N/FCFS, M/M/C : $\infty$ /FCFS, M/M/C : N/FCFS.   |
|         | Module - 4  |
| Dynar   | nic Programming   |
|         | nic programming multistage decision processes – types – concept of sub optimization and the principle of optimality – computational lure in dynamic programming – examples illustrating the calculus method of solution - examples illustrating the tabular method of solution. |
| -       | r Programming   |
|         | nd mixed integer programming problems, Solution of Integer programming problems – Gomory's all integer cutting plane method and mixed r method, branch and bound method, Zero-one programming.  |
| U       | Module - 5  |
| simula  |   |
|         | e outcomes:   |
|         | Understand the overview of optimization techniques, concepts of design space, constraint surfaces and objective function.   |
|         | Review differential calculus in finding the maxima and minima of functions of several variables.  |
| 3.      | Formulate real-life problems with Linear Programming.   |
| 4.      | Solve the Linear Programming models using graphical and simplex methods.  |
| 5.      | Formulate real-life transportation, assignment and travelling salesman problems to find the optimum solution using transportation algorithms  |
| 6.      | Analyze the Queuing model for effective customer satisfaction   |
| 7.      | Apply dynamic programming to optimize multi stage decision problems.  |
| 8.      | Determine the level of inventory that a business must maintain to ensure smooth operation.  |
| Q       | Construct precedence diagram for series of activities in a huge project to find out probability of expected completion time using   |
|         |   |
| ۶.      | PERT-CPM networks. Also reduce the duration of project by method of crashing.   |

Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation.

**Course outcomes:** 

- 1. Summarize the basic concepts of energy, its distribution and general Scenario.
- 2. Explain different energy storage systems, energy management, audit and economic analysis.
- 3. Summarize the environment eco system and its need for awareness.
- 4. Identify the various types of environment pollution and their effects.
- 5. Discuss the social issues of the environment with associated acts.

# **TEXT BOOKS:**

- 1. Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education by University grant commission and BharathiVidyapeeth Institute of environment education and Research ,Pune
- 2. De, B. K., Energy Management audit & Conservation, 2nd Edition, Vrinda Publication, 2010.

|--------|---|--|--|--|--|
| Netwo  | ork Analysis  |  |  |  |  |
| the ex | uction, network construction - rules, Fulkerson's rule for numbering the events, AON and AOA diagrams; Critical path method (CPM) to find spected completion time of a project, floats; PERTfor finding expected duration of an activity and project, determining the probability of eting a project, predicting the completion time of project; crashing of simple projects. |  |  |  |  |
| Cours  | se Outcomes   |  |  |  |  |
| On co  | mpletion of the course the student will be able to  |  |  |  |  |
| 1.     | Understand the selection, prioritization and initiation of individual projects and strategic role of project management.  |  |  |  |  |
| 2.     | Understand the work breakdown structure by integrating it with organization.  |  |  |  |  |
| 3.     | Understand the scheduling and uncertainty in projects.  |  |  |  |  |
| 4.     | Students will be able to understand risk management planning using project quality tools.   |  |  |  |  |
| 5.     | Understand the activities like purchasing, acquisitions, contracting, partnering and collaborations related to performing projects.   |  |  |  |  |
| 6.     | Determine project progress and results through balanced scorecard approach  |  |  |  |  |
| 7.     | Draw the network diagram to calculate the duration of the project and reduce it using crashing.   |  |  |  |  |

**Course Objectives:** 

- 1. This course will provide a basic understanding of flow measurements usingvarious types of flow measuring devices, calibration and losses associated with these devices.
- 2. Energy conversion principles, analysis and understanding of hydraulic turbines and pumps will be discussed. Application of these concepts for these machines will be demonstrated. Performance analysis will be carried out using characteristic curves.

#### PART A

- 1. Lab layout, calibration of instruments and standards to be discussed
- 2. Determination of coefficient of friction of flow in a pipe.
- 3. Determination of minor losses in flow through pipes.
- 4. Application of momentum equation for determination of coefficient of impact of jets on flat and curved blades
- 5. Calibration of flow measuring devices.
- 6. Orifice meter
  - o Nozzle
  - Venturimeter
  - o V-notch

# PART B

- 1. Performance on hydraulic Turbines
  - a. Pelton wheel
  - b. Francis Turbine
  - c. Kaplan Turbines

- 2. Performance hydraulic Pumps
  - a. Single stage and Multi stage centrifugal pumps
  - b. Reciprocating pump
- 3. Performance test on a two stage Reciprocating Air Compressor
- 4. Performance test on an Air Blower

# PART C(Optional)

- 1. Visit to Hydraulic Power station/ Municipal Water Pump House and Case Studies
- 2. Demonstration of cut section models of Hydraulic turbines and Pumps.

**Course outcomes:** 

- Perform experiments to determine the coefficient of discharge of flow measuring devices.
- Conduct experiments on hydraulic turbines and pumps to draw characteristics.
- Test basic performance parameters of hydraulic turbines and pumps and execute the knowledge in real life situations.
- Determine the energy flow pattern through the hydraulic turbines and pumps
- Exhibit his competency towards preventive maintenance of hydraulic machines
- ٠

# **Reading:**

- 1. K.L.Kumar."Engineering Fluid Mechanics" Experiments, Eurasia Publishing House, 1997
- 2. JagdishLal, Hydraulic Machines, Metropolitan Book Co, Delhi, 1995
- 3.<u>George E. Totten</u>, <u>Victor J. De Negri</u> "Handbook of Hydraulic Fluid Technology, Second Edition, 2011.

4. Demonstration of  $p\theta$ , pV plots usingComputerized IC engine test rig

## PART C(Optional)

- 1. Visit to Automobile Industry/service stations.
- 2. CFD Analysis of design, development, performance evaluation and process optimization in I C Engines.

**Course outcomes:** 

- Perform experiments to determine the properties of fuels and oils.
- Conduct experiments on engines and draw characteristics.
- Test basic performance parameters of I.C. Engine and implement the knowledge in industry.
- Identify exhaust emission, factors affecting them and report the remedies.
- Determine the energy flow pattern through the I C Engine
- Exhibit his competency towards preventive maintenance of IC engines.
- 1. E.F.Obert, Internal combustion engines and air pollution intext educational publishers (1973). John Heywood, Internal combustion engine fundamentals, McGraw- Hill (1988) USA.

|  | Modu  | ıle - 3                             |  |  |  |  |
| Beams and Shafts:Boundary cor  | nditions, Load vector, Hermite shape f  | unctions, Beam stiffness matrix ba  | ased on Euler-Bernoulli beam theory,         |  |  |  |
| Examples on cantilever beams, propped cantilever beams, Numerical problems on simply supported, fixed straight and stepped beams using |   |                                     |  |  |  |  |
|  |   |                                     |  |  |  |  |

direct stiffness method with concentrated and uniformly distributed load.

Torsion of Shafts: Finite element formulation of shafts, determination of stress and twists in circular shafts.

**Heat Transfer:** Basic equations of heat transfer: Energy balance equation, Rate equation: conduction, convection, radiation, energy generated in solid, energy stored insolid, 1D finite element formulation using vibrational method, Problems with temperature gradient and heat fluxes, heat transfer in composite sections, straight fins.

Module - 5

Module - 4

**Axi-symmetric Solid Elements**: Derivation of stiffness matrix of axisymmetric bodies with triangular elements, Numerical solution of axisymmetric triangular element(s) subjected to surface forces, point loads, angular velocity, pressure vessels.

**Dynamic Considerations:** Formulation for point mass and distributed masses, Consistent element mass matrix of one dimensional bar element, truss element, axisymmetric triangular element, quadrilateral element, beam element. Lumped mass matrix of bar element, truss element, Evaluation of eigen values and eigen vectors, Applications to bars, stepped bars, and beams.

**Course outcomes:** 

1. Understand the concepts behind formulation methods in FEM.

2. Identify the application and characteristics of FEA elements such as bars, beams, plane and so-parametric elements.

3. Develop element characteristic equation and generation of global equation.

4. Able to apply suitable boundary conditions to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow, axi symmetric and dynamic problems and solve them displacements, stress and strains induced.

**Course Objectives:** 

- To impart knowledge of CIM andAutomation and different concepts of automation by developing mathematical models.
- To make students to understand the Computer Applications in Design and Manufacturing [CAD / CAM) leading to Computer integrated
- systems. Enable them to perform various transformations of entities on display devices.
- To expose students to automated flow lines, assembly lines, Line Balancing Techniques, and Flexible Manufacturing Systems.
- To expose students to computer aided process planning, material requirement planning, capacity planning etc.
- To expose the students to CNC Machine Tools,CNC part programming, and industrial robots.
- To introduce the students to concepts of Additive Manufacturing, Internet of Things, and Industry 4.0leading to Smart Factory.

Module - 1

## **Introduction to CIM and Automation:**

Automation in Production Systems, automated manufacturing systems- types of automation, reasons for automating, Computer Integrated Manufacturing, computerized elements of a CIM system, CAD/CAM and CIM.

Mathematical models and matrices:production rate, production capacity, utilization and availability, manufacturing lead time, work-inprocess, numerical problems.

Automated Production Lines and Assembly Systems: Fundamentals, system configurations, applications, automated flow lines, buffer storage, control of production line, analysis of transfer lines, analysis of flow lines without storage, partial automation, analysis of automated flow lines with storage buffer, fundamentals of automated assembly systems, numerical problems.

Module - 2

CAD and Computer Graphics Software: The design process, applications of computers in design, software configuration, functions of graphics

package, constructing the geometry.

Transformations: 2D transformations, translation, rotation and scaling, homogeneous transformation matrix, concatenation, numerical problems on transformations.

**Computerized Manufacture Planning and Control System:** Computer Aided Process Planning, Retrieval and Generative Systems, benefits of CAPP, Production Planning and Control Systems, typical activities of PPC System, computer integrated production management system, Material Requirement Planning, inputs to MRP system, working of MRP, outputs and benefits, Capacity Planning, Computer Aided Quality Control, Shop floor control.

Module - 3 Flexible Manufacturing Systems: Fundamentals of Group Technology and Flexible Manufacturing Systems, types of FMS, FMS components, Material handling and storage system, applications, benefits, computer control systems, FMS planning and design issues, Automated Storage and Retrieval Systems, AS/RS and Automatic parts identification systems and data capture. Line Balancing: Line balancing algorithms, methods of line balancing, numerical problems on largest candidate rule, Kilbridge and Wester method, and Ranked Positional Weights method. Module - 4 **Computer Numerical Control:** Introduction, components of CNC, CNC programming, manual part programming, G Codes, M Codes, programming of simple components inturning, drilling and milling systems, programming with canned cycles. Cutter radius compensations. Robot Technology: Robot anatomy, joints and links, common robot configurations, robot control systems, accuracy and repeatability, end effectors, sensors in robotics. Robot programming methods: on-line and off-line methods. Robot industrial applications: Material handling, processing and assembly and inspection. Module - 5 Additive Manufacturing Systems: Basic principles of additive manufacturing, slicing CAD models for AM, advantages and limitations of AM technologies, Additive manufacturing processes: Photo polymerization, material jetting, binder jetting, material extrusion, Powder bed sintering techniques, sheet lamination, directenergy deposition techniques, applications of AM.Recenttrends in manufacturing, Hybrid manufacturing. Future of Automated Factory: Industry 4.0, functions, applications and benefits. Components of Industry 4.0, Internet of Things (IOT), IOT applications in manufacturing, Big-Data and Cloud Computing for IOT, IOT for smart manufacturing, influence of IOT on predictive maintenance, industrial automation, supply chain optimization, supply-chain & logistics, cyber-physical manufacturing systems.

**Course outcomes:** 

- Able to define Automation, CIM, CAD, CAM and explain the differences between these concepts.
- Solve simple problems of transformations of entities on computer screen.
- Explain the basics of automated manufacturing industries through mathematical models and analyze different types of automated flow lines.
- Analyze the automated flow linesto reduce down time and enhance productivity.
- Explain the use of different computer applications in manufacturing, and able to prepare part programs for simple jobs on CNC machine tools and robot programming.
- Visualize and appreciate the modern trends in Manufacturing like additive manufacturing, Industry 4.0 and applications of Internet of Things leading to Smart Manufacturing.

# Heat Transfer B.E, VI Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                          | 17ME63                  | CIE Marks  | 40 |
|--------------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week         | 04                      | SEE Marks  | 60 |
| <b>Total Number of Lecture Hours</b> | 50(10 Hours per Module) | Exam Hours | 03 |
| Credits – 04                         |                         |            |    |

**Course Objectives:** 

- Study the modes of heat transfer.
- Learn how to formulate and solve 1-D steady and unsteady heat conduction problems.
- Apply empirical correlations for fully-developed laminar, turbulent internal flows and external boundary layer convective flow problems.
- Study the basic principles of heat exchanger analysis and thermal design.
- Understand the principles of boiling and condensation including radiation heat transfer related engineering problems.

Module - 1

Introductory concepts and definitions: Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer combined heat transfer mechanism, Types of boundary conditions.General Heat Conduction Equation: Derivation of the equation in (i) Cartesian, (ii) Polar and (iii) Spherical Co-ordinateSystems.

Steady-state one-dimensional heat conduction problems in Cartesian System: Steady-state one-dimensional heat conduction problems (i) with and without heat generation and (ii) with and without varying thermal conductivity - in Cartesian system with various possible boundary conditions, Thermal Resistances in Series and in Parallel.

Module - 2

Critical Thickness of Insulation: Concept, Derivation, Extended Surfaces or Fins: Classification, Straight Rectangular and Circular Fins, Temperature Distribution and Heat Transfer Calculations, Fin Efficiency and Effectiveness, Applications

Transient [Unsteady-state] heat conduction: Definition, Different cases - Negligible internal thermal resistance, negligible surface resistance,

comparable internal thermal and surface resistance, Lumped body, Numerical Problems, Heisler and Grober charts.

Introduction to Numerical analysis of Heat conduction

Module - 3

Forced Convection: Boundary Layer Theory, Velocity and Thermal Boundary Layers, Prandtl number, Governing Equations – Continuity, Navier-Stokes and Energy equations, Boundary layer assumptions, Integral and Analytical solutions to above equations, Turbulent flow, Various empirical solutions, forced convection flow over cylinders and spheres, Internal flows –laminar and turbulent flow solutions,Forced Convection Cooling of Electronic Devices.

Free convection: Laminar and Turbulent flows, Vertical Plates, Vertical Tubes and Horizontal Tubes, Empirical solutions.

83

Thermal Radiation: Fundamental principles - Gray, White, Opaque, Transparent and Black bodies, Spectral emissive power, Wien's, Rayleigh-Jeans' and Planck's laws, Hemispherical Emissive Power, Stefan-Boltzmann law for the total emissive power of a black body, Emissivity and Kirchhoff's Laws, View factor, Net radiation exchange in a two-body enclosure, Typical examples for these enclosures, Radiation Shield.

Module - 5

Heat Exchangers: Definition, Classification, applications, LMTD method, Effectiveness - NTU method, Analytical Methods, Fouling Factors, Chart Solution Procedures for solving Heat Exchanger problems: Correction Factor Charts and Effectiveness-NTU Charts, compact heat exchangers. Heat Transfer with Phase Change: Introduction to boiling, pool boiling,Bubble Growth Mechanisms,Nucleate Pool Boiling,Critical Heat Flux in Nucleate Pool Boiling, Pool Film Boiling,Critical Heat Flux,Heat Transfer beyond the Critical Point,filmwise and dropwise Condensation, heat pipes, entrainment, wicking and boiling limitations.

**Course outcomes:** 

- Understand the basic modes of heat transfer.
- Compute temperature distribution in steady-state and unsteady-state heat conduction
- Understand and interpret heat transfer through extended surfaces.
- Interpret and compute forced and free convective heat transfer.
- Explain the principles of radiation heat transfer and understand the numerical formula for heat conduction problems.
- Design heat exchangers using LMTD and NTU methods.

# **TEXT BOOKS:**

- 1. Principals of heat transfer, FrankKreith, Raj M. Manglik, Mark S. Bohn, Seventh Edition, Cengage learning, 2011.
- 2. Yunus A. Cengel Heat transfer, a practical approach, Fifth edition, Tata Mc Graw Hill.
- 3. J P Holman, Souvik Bhattacharyya, 10<sup>th</sup> Edition, McGraw Hill Education Private Ltd.,

# **REFERENCE BOOKS**

- 1. Heat and mass transfer, Kurt C, Rolle, second edition, Cengage learning.
- 2. Heat Transfer, M. NecatiOzisik, A Basic Approach, McGraw Hill, New York, 2005.
- 3. Fundamentals of Heat and Mass Transfer, Incropera, F. P. and De Witt, D. P., 5th Edition, John Wiley and Sons, New York, 2006.
- 4. Heat Transfer, Holman, J. P., 9th Edition, Tata McGraw Hill, New York, 2008.

# **E-Books/Web references:**

- 1. A Text book of Heat Transfer, John H Lienhard, 4th Edition,
- 2. NPTEL Heat Transfer course for Mechanical Engineering, http://nptel.ac.in/courses/112101097/
- 3. Heat Transfer, Chris Long &NaserSayma, Bookboon.com

Finite volume method

Finite volume method. Finding the flux at interface.

**Central schemes** - Lax-Friedrichs Method, Lax-Wendroff Method, Two-Step Lax-Wendroff Method and Mac Cormack Method **Upwind Method in Finite Volume methods** - Flux Splitting Method Steger and Warming, vanLeer, Roe's Method and finding Roe's Averages.

**Course outcomes:** 

- Understand mathematical characteristics of partial differential equations.
- Explain how to classify and computationally solve Euler and Navier-Stokes equations.
- Make use of the concepts like accuracy, stability, consistency of numerical methods for the governing equations.
- Identify and implement numerical techniques for space and time integration of partial differential equations.
- Conduct numerical experiments and carry out data analysis.
- Acquire basic skills on programming of numerical methods used to solve the Governing equations.

**Failure Analysis and Design of Laminates:** Special cases of Laminates; Symmetric Laminates, Cross-ply laminates, Angle ply Laminates, antisymmetric Laminates, Balanced Laminate. Failure Criterion for a Laminate. Design of a Laminated Composite. Numerical Problems.

#### **Course outcomes:**

- To identify the properties of fiber and matrix materials used in commercial composites, as well as some common manufacturing techniques.
- To predict the failure strength of a laminated composite plate
- Understand the linear elasticity with emphasis on the difference between isotropic and anisotropic material behaviour.
- Acquire the knowledge for the analysis, design, optimization and test simulation of advanced composite structures and Components.

**High Energy Rate Forming Methods & Powder Metallurgy:** High Energy Rate Forming Methods: Principles, advantages and applications, explosive forming, electro hydraulic forming, Electromagnetic forming.

**Powder Metallurgy:** Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations.

### **Course outcomes:**

- Able to understandthe concept of different metal forming process.
- Able to approach metal forming processes both analytically and numerically
- Able to design metal forming processes
- Able to develop approaches and solutions to analyze metal forming processes and the associated problems and flaws.

# **TEXT BOOKS:**

- 1. Mechanical metallurgy (SI Units), G.E.Dieter, McGraw hill Pub-2001.
- 2. Production Technology (Manufacturing process, technology and Automation), R.K Jain, Khanna Publishers-2004.
- 3. Manufacturing Science, Amithab Gosh & A.K.Malik, East-West press 2001.
- 4. Production Technology Vol-II by O. P. Khanna &Lal, DhanpatRai Publications-2012.
- 5. A Course in Workshop Technology Vol: 1, Manufacturing Process, B.S Raghuwanshi, Published by DhanpatRai& Co (P) Ltd.-2014.

- 1. Materials & Process in Manufacturing E.Paul, Degramo, J.T.Black, Ranold, A.K.Prentice-hall of India 2002
- 2. Elements of Workshop Technology Vol:1, S.K.Hajra Choudhury, Media Promoters & Publishers Pvt Ltd.-2008.
- 3. Fundamentals of Manufacturing Processes by Lal G K, Narosa
- 4. Textbook of Production Engineering by P. C. Sharma, S Chand & Company Ltd.

**FUELS, FUEL SUPPLY SYSTEMS FOR SI AND CI ENGINES**: Conventional fuels, alternative fuels, normal and abnormal combustion, cetane and octane numbers, Fuel mixture requirements for SI engines, types of carburetors, C.D.& C.C. carburetors, multi point and single point fuel injection systems, fuel transfer pumps, Fuel filters, fuel injection pumps and injectors. Electronic Injection system, Common Rail Direct Injection System.

## Module - 5

AUTOMOTIVE EMISSION CONTROL SYSTEMS: Different air pollutants, formation of photochemical smog and causes. Automotive emission controls, controlling crankcase emissions, controlling evaporative emissions, Cleaning the exhaust gas, Controlling the air-fuel mixture, Controlling the combustion process, Exhaust gas recirculation, Treating the exhaust gas, Air-injection system, Air-aspirator system, Catalytic converter. EMISSION STANDARDS: Euro I, II, III and IV norms, Bharat Stage II, III, IV norms. Motor Vehicle Act

**Course outcomes:** 

- To identify the different parts of an automobile and it's working
- To understand the working of transmission and braking systems
- To comprehend the working of steering and suspension systems
- To learn various types of fuels and injection systems
- To know the cause of automobile emissions, its effects on environment and methods to reduce the emissions.

# Module - 5 CHEMICAL SAFETY AND OTHER SAFETY CHECKS

Introduction to Chemical safety, Labeling of chemicals, acid hoods. Handling of acids, eye washers and showers. Safety thinking, accident investigation, safety policy of the company, safety, loss prevention and control, check list for LPG installations, safety precautions using CNG, fire prevention and safety audit, confined space entry, risk assessment.

**Course outcomes:** 

- Understand the basic safety terms.
- Identify the hazards around the work environment and industries.
- Use the safe measures while performing work in and around the work area of the available laboratories.
- Able to recognize the sign boards and its application.
- Able to demonstrate the portable extinguishers used for different class of fires.
- Able to write the case studies by sharing experience of the employees working in housekeeping, laboratories like workshops, electrical labs, machine shops, electronics and computer laboratories.
- Able to understand and report the case studies from various references (text books, news report, journals, visiting industries like power stations, manufacturing and maintenance).

# <u>Maintenance Engineering</u> B.E, VI Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                          | 17ME663                | CIE Marks  | 40 |  |
|--------------------------------------|------------------------|------------|----|--|
| Number of Lecture Hours/Week         | 03                     | SEE Marks  | 60 |  |
| <b>Total Number of Lecture Hours</b> | 40(8 Hours per Module) | Exam Hours | 03 |  |
| Credits – 03                         |                        |            |    |  |

**Course objectives:** 

The course is intended to provide basic concepts of maintenance engineeringtoengineeringstudents with following aspects:

- To acquire basic understanding of Maintenance systems
- To develop an understanding of the principles of Preventive Maintenance & Predictive Maintenance
- Provides a methodology for reliability & probability concepts applied to maintenance engineering
- The students will concept and procedures for Condition Monitoring in Mechanical and Electrical systems along with the analysis and processing techniques for machine fault identification

## Module – 1

**Maintenance systems:** Maintenance objectives and scopes; Maintenance strategies & organizations; Maintenance works; life cycle costsPreventive Maintenance: Principles of preventive maintenance, procedures & selection; Preventive Maintenance planning, scheduling and control; Forms & resources; Maintenance work measurement; Modeling and analysis techniques in PM and inspections; Predictive maintenance.

**Computerized Maintenance Management systems:** Benefits and applications; Work order systems & plant registers; Maintenance reports, analysis and monitoring; Introduction to commercial packages Equipment maintenance:Installation, commissioning and testing of plant equipment, checking for alignment, lubrication and lubrication schedule; maintenance of typical rotating and process equipment systems like turbines, pumps and fans, centrifuges, heat exchangers, boilers and pressure vessels etc.

## Module – 2

**Reliability & probability Concepts:** Basic concepts of probability theory and distributions, definition of reliability, failure probability, reliability and hazard rate function, MTBF and MTTR, System reliability, series and parallel system, redundancy.

## Module – 3

**Reliability Centered Maintenance**:principles of RCM, Benefits of RCM, application of RCMStep-by-step procedure in conducting RCM analysis. The Plant Register. Functions and Failures. Failure mode and effect analysis (FMEA). Failure consequences. Maintenance and decision making. Acturial analysis and Failure data. Perspective loops. Default action. The RCM Decision diagram. The nature of Failure and Technical history.

Module – 4

**Total Productive Maintenance:** Goals of TPM and methodology, TPM improvement plan & procedures. The modern role of care and asset management through TPM, the use of TPM concepts consisting of Pareto ABC analysis, Fishbone diagrams, OEE and 5S. Fault analysis.

## **Condition Monitoring:**

# Measurable phenomena from different Plant Items:

Measurable phenomena associated with degradation from a range of plant items includingmotors/generators, transformers, cables, bushings, connectors, capacitors and circuit breakers.

Module - 5

### Fault diagnosis of Rotational Machines:

Unbalance, shaft and coupling misalignments, bent shafts, gear and bearing wear, oil whirls and shaft eccentricity.

## Measurement Strategies and Techniques:

A wide range of strategies and associated technologies will be discussed including light emission (photo multipliers, fiber optic techniquesetc.), heat emissions (IR, cameras, direct temperature measurement, etc.), electrical charges (tan d, electrical particle discharge, etc.), force, power and vibration.

## **Data Processing and Analysis:**

For each of the approaches, options with respect to data processing and analysis will be discussed including digital signal processing and computational techniques. Close attention will be paid through examples of the cost benefits and the reliability which can be placed on data with respect to formulating a view on the condition of a give item of plant.

## **Course outcomes:**

On completion of this subject students will be able to:

- **1.** Understand maintenance objectives and evaluate various maintenance strategies for process plant application, Develop necessary planning and scheduling and control of preventive maintenance activities.
- 2. Evaluate reliability of a simple plant component and system.
- 3. Understand and apply the advanced concepts such as RCM and advantages for a company employing them
- 4. Understand and apply the advanced concepts such as TPM and advantages for a company employing
- 5. Applythe principles of condition monitoring systems.

6. Apply the mechanical condition monitoring techniques and analyze the data used in condition monitoring

## **TEXT BOOKS:**

- 1. Practical machinery Vibration Analysis & Predictive Maintenance, C. Scheffer and P. Girdhar,, IDC technologies, 2004.
- 2. Introduction to Machinery Analysis and Monitoring, John S. Mitchell, PennWell Books, 1993.
- 3. Machinery Vibration, Measurement and Analysis, Victor Wowk, Mc Craw Hill, 1991

- 1. Handbook of Condition Monitoring, B.K.N. Rao, 1996

|   | liagram, process flow diagram, cause and                    | l effect diagram, check sheets, histog    | rams, statistical fundamentals,  |
|   | • •   | oles, control charts for attributes, scat |                                  |

**Tools and Techniques:** Benching marking, information technology, quality management systems, environmental management system, and qualityfunction deployment, quality by design, failure mode and effect analysis, product liability, total productive maintenance.

**Course outcomes:** 

- 1. Explain the various approaches of TQM
- 2. Infer the customer perception of quality
- 3. Analyze customer needs and perceptions to design feedback systems.
- 4. Apply statistical tools for continuous improvement of systems
- 5. Apply the tools and technique for effective implementation of TQM.

7.Determination of temperature distribution along a rectangular and circular fin subjected to heat loss through convection using Numerical approach (ANSYS/CFD package)

#### **Course outcomes:**

- 1. Perform experiments to determine the thermal conductivity of a metal rod
- 2. Conduct experiments to determine convective heat transfer coefficient for free and forced convection and correlate with theoretical values.
- 3. Estimate the effective thermal resistance in composite slabs and efficiency in pin-fin
- 4. Determine surface emissivity of a test plate
- 5. Estimate performance of a refrigerator and effectiveness of fin
- 6. Calculate temperature distribution of study and transient heat conduction through plane wall, cylinder and fin using numerical approach.

#### **Reading:**

- 1. M. NecatiOzisik, Heat Transfer A Basic Approach, McGraw Hill, New York, 2005.
- 2. Incropera, F. P. and De Witt, D. P., Fundamentals of Heat and Mass Transfer, 5th Edition, John Wiley and Sons, New York, 2006.
- 3. Holman, J. P., Heat Transfer, 9th Edition, Tata McGraw Hill, New York, 2008.

# Scheme of Examination:

|   | n for natural frequency determination             |                                     |                                 |
| b) Bar subjected to for                 | n subjected to forcing function                   |                                     |                                 |
| c) Fixed – fixed bear                   | i subjected to forcing function                   |                                     |                                 |
|   | PART  | - C                                 |                                 |
| 1) Demonstrate the use of graph         | nics standards (IGES, STEP etc) to import th      | ne model from modeler to solver     |                                 |
| 2) Demonstrate one example of           | contact analysis to learn the procedure to ca     | arry out contact analysis.          |                                 |
| 3) Demonstrate at least two differences | Ferent type of example to model and analyze       | bars or plates made from composi    | ite material                    |

**Course outcomes:** 

- Demonstrate the basic features of an analysis package.
- Use the modern tools to formulate the problem, and able to create geometry, descritize, apply boundary condition to solve problems of bars, truss, beams, plate to find stress with different-loading conditions.
- Demonstrate the deflection of beams subjected to point, uniformly distributed and varying loads further to use the available results to draw shear force and bending moment diagrams.
- Analyze the given problem by applying basic principle to solve and demonstrate 1D and 2D heat transfer with conduction and convection boundary conditions.
- Carry out dynamic analysis and finding natural frequencies for various boundary conditions and also analyze with forcing function.

- 2. Fundaments of FEM, Hutton McGraw Hill, 2004

3. Finite Element Analysis, George R. Buchanan, Schaum Series

# Scheme for Examination:

One Question from Part A - 40Marks (10 Write up +30)

One Question from Part B - 40 Marks (10 Write up +30)

Viva-Voce - 20 Marks

**Total 100 Marks** 

# ENERGY ENGINEERING B.E, VII Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME71                  | CIE Marks  | 40 |  |
|-------------------------------|-------------------------|------------|----|--|
| Number of Lecture Hours/Week  | 04                      | SEE Marks  | 60 |  |
| Total Number of Lecture Hours | 50(10 Hours per Module) | Exam Hours | 03 |  |
| Credits – 04                  |                         |            |    |  |

Course Objectives:

- Understand energy scenario, energy sources and their utilization
- Learn about energy conversion methods and their analysis
- Study the principles of renewable energy conversion systems
- Understand the concept of green energy and zero energy.

Module - 1

**Thermal Energy conversion system:** Review of energy scenario in India,General Philosophy and need of Energy ,Different Types of Fuels used for steam generation,Equipment for burning coal in lump form, strokers, different types, Oilburners, Advantages and Disadvantages of using pulverized fuel, Equipmentfor preparation and burning of pulverized coal, unit system and bin system.Pulverized fuel furnaces, cyclone furnace, Coal and ash handling, Generationof steam using forced circulation, high and supercritical pressures.Chimneys: Natural, forced, induced and balanced draft, Calculations andnumerical involving height of chimney to produce a given draft. Coolingtowers and Ponds. Accessories for the Steam generators such asSuperheaters, De-superheater, control of superheaters, Economizers, Air preheatersand re-heaters.

### Module - 2

**Diesel Engine Power System**: Applications of Diesel Engines in Power field.Method of starting Diesel engines. Auxiliaries like cooling and lubricationsystem, filters, centrifuges, Oil heaters, intake and exhaust system, Layout ofdiesel power plant. **Hydro-Electric Energy**: Hydrographs, flow duration and mass curves, unithydrograph and numerical. Storage and pondage, pumped storage

plants, low, medium and high head plants, Penstock, water hammer, surge tanks, gates and valves. General layout of hydel power plants.

Module - 3

**Solar Energy**: Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Measurement of solar radiation data, Solar Thermal systems: Introduction; Basics of thermodynamics and heat transfer; Flat plate collector; Evacuated Tubular Collector; Solar air collector; Solar concentrator; Solar distillation; Solar cooker; Solar refrigeration and air conditioning; Thermal energy storage systems, Solar Photovoltaic systems: Introduction; Solar cell Fundamentals; Characteristics and classification; Solar cell: Module, panel and Array construction; Photovoltaic thermal systems

**Wind Energy**: Properties of wind, availability of wind energy in India, windvelocity and power from wind; major problems associated with wind power, wind machines; Types of wind machines and their characteristics, horizontal land vertical axis wind mills, coefficient of performance of a wind mill rotor(Numerical Examples).

**Tidal Power**: Tides and waves as energy suppliers and their mechanics;fundamental characteristics of tidal power, harnessing tidal energy, Limitations.

Module - 5

**Biomass Energy**: Introduction; Photosynthesis Process; Biofuels; Biomass Resources; Biomass conversion technologies; Urban waste to energy conversion; Biomass gasification.

**Green Energy**: Introduction: Fuel cells: Overview; Classification of fuel cells; Operating principles; Fuel cell thermodynamics Nuclear, ocean, MHD, thermoelectric and geothermal energy applications; Origin and their types; Working principles, Zero energy Concepts .

### **Course outcomes:**

- 1. Summarize the basic concepts of thermal energy systems,
- 2. Identify renewable energy sources and their utilization.
- 3. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
- 4. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas.
- 5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
- 6. Identify methods of energy storage for specific applications

system, counter balance valve application, hydrauliccylinder sequencing circuits, cylinder synchronizing circuit using different methods, hydraulic circuit for

force multiplication; speedcontrol of hydraulic cylinder- metering in, metering out and bleed off circuits. Pilot pressure operated circuits. Hydraulic circuit examples with accumulator.

Module - 4

#### Pneumatic power systems

Introduction to Pneumatic systems: Pneumatic power system, advantages, limitations, applications, Choice of working medium. Characteristics of compressed air and air compressors. Structure of pneumatic control System, fluid conditioners-dryers and FRL unit.

Pneumatic Actuators: Linear cylinder –types of cylinders, working, end position cushioning, seals, mounting arrangements, and applications.

Rotary cylinders- types, construction and application, symbols.

Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols.

#### Module - 5

#### Pneumatic control circuits

**Simple Pneumatic Control:** Direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and exhaust air throttling. **Signal Processing Elements:** Use of Logic gates - OR and AND gates in pneumatic applications.

Practical examples involving the use of logic gates.

**Multi- Cylinder Application:** Coordinated and sequential motion control, motion and control diagrams. Signal elimination methods, Cascading method-principle, Practical application examples (up to two cylinders) using cascading method (using reversing valves).

**Electro- Pneumatic Control:** Principles - signal input and output, pilot assisted solenoid control of directional control valves, use of relay and contactors. Control circuitry for simple signal cylinder application.

#### **Course outcomes:**

- 1. Identify and analyse the functional requirements of a fluid power transmission system for a given application.
- 2. Visualize how a hydraulic/pneumatic circuit will work to accomplish the function.
- 3. Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics, electro-pneumatics for a given application.
- 4. Select and size the different components of the circuit.
- 5. Develop a comprehensive circuit diagramby integrating the components selected for the given application.

System Compensation and State Variable Characteristics of Linear Systems :Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalmanand Gilberts test.

**Course outcomes:** 

- **1.** Recognize control system and its types , control actions
- 2. Determine the system governing equations for physical models(Electrical, Thermal, Mechanical, Electro Mechanical)
- 3. Calculate the gain of the system using block diagram and signal flow graph
- 4. Illustrate the response of 1st and 2nd order systems
- 5. Determine the stability of transfer functions in complex domain and frequency domain
- 6. Employ state equations to study the controllability and observability

**Air-Cooled Heat Exchangers**: Air as coolant for industrial processes; custom-built units; fin-tube systems for air coolers; fin-tube bundles; thermal rating; tube side flow arrangements; cooling air supply by fans; cooling airsupply in natural draft towers.

**Furnaces And Combustion Chambers:** Introduction; process heaters and boiler; heat transfer in furnaces: - Heat source; Heat sink; refractory surfaces; heat transfer to the sink; Design methods: - Method of Lobo and Evans:Method of Wilson, Lobo and Hottel; The Orrok-Hudson equation; Wallenberg simplified method.

#### Module - 5

**Heat pipes** - types and applications, operating principles, working fluids, wick structures, control techniques, pressure balance, maximum capillary pressure, liquid and vapor pressure drops, effective thermal conductivity of wick structures, capillary limitation on heat transport capability, sonic, entrainment, and boiling limitations, determination of operating conditions; Heat pipe design – fluid selection, wick selection, material selection, preliminary design considerations, heat pipe design procedure, determination of heat pipe diameter, design of heat pipe containers, wick design, entertainment and boiling limitations, design problems

**Course outcomes:** 

- 1. To have complete knowledge of heat exchanger and its applications
- 2. To be able to design shell and tube heat exchanger
- **3.** To be able to select and design of steam heat condenser and compact heat exchanger condenser and heat pipes for various application

**TEXT BOOKS:** 

1. Process Heat Transfer: Donald Q. Kern, Tata McGraw –Hill Edition (1997)

2. Compact Heat Exchangers: W. M. Kays& A. L. London, McGraw –Hill co. (1997)

3. Heat Pipe Theory and Practice Chi, S. W., - A Source Book, McGraw-Hill, 1976

## **REFERENCE BOOKS**

1. Heat Transfer – A Basic Approach: NecatiOzsisik, McGraw – Hill International edition (1985).

2. Heat Exchanger Design Hand Book: Volumes 2 and 3, edited by Ernst U schlunder. et. al Hemisphere Publishing Co.(1983)

3. Heat exchanger- Kokac Thermal- hydraulic and design analysis.

4. Heat Pipes Dunn, P. D. and Reay, D. A., , Fourth Edition, Pergamon Press, 1994

# TRIBOLOGY B.E, VII Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME742                  | CIE Marks  | 40 |
|-------------------------------|--------------------------|------------|----|
| Number of Lecture Hours/Week  | 03                       | SEE Marks  | 60 |
| Total Number of Lecture Hours | 40 ( 8 Hours per Module) | Exam Hours | 03 |
| Credits –03                   |                          |            |    |

**Course Objectives:** 

- To educate the students on theimportance of friction, the related theories/laws of sliding and rolling friction and the effect of viscosity of lubricants.
- To expose the students to the consequences of wear, wear mechanisms, wear theories and analysis of wear problems.
- Tomake the students understand the principles of lubrication, lubrication regimes, theories of hydrodynamic and the advanced lubrication techniques.
- To expose the students to the factors influencing the selection of bearing materials fordifferent sliding applications.
- To introduce the concepts of surface engineering and its importance in tribology.

| Module - 1  |
|---|
| Introduction to tribology: Historical background, practical importance, and subsequent use in the field.  |
| Lubricants: Types and specific field of applications. Properties of lubricants, viscosity, its measurement, effect of temperature and pressure on viscosity,  |
| lubrication types, standard grades of lubricants, and selection of lubricants.  |
| Module - 2  |
| Friction: Origin, friction theories, measurement methods, friction of metals and non-metals.  |
| Wear: Classification and mechanisms of wear, delamination theory, debris analysis, testing methods and standards. Related case studies.                       |
| Module - 3  |
| Hydrodynamic journal bearings: Friction forces and power loss in a lightly loaded journal bearing, Petroff'sequation, mechanism of pressure development       |
| in an oil film, and Reynold's equation in 2D.   |
| Introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's number and it'ssignificance; partial bearings, end |
| leakages in journal bearing, numerical examples on full journal bearings only.  |

Plane slider bearings with fixed/pivoted shoe: Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a fixed/pivoted shoe bearing,center of pressure, numerical examples.

Module - 4

**Hydrostatic Lubrication:** Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing, numerical examples.

Module - 5

**Bearing Materials:**Commonly used bearings materials, and properties of typical bearing materials. Advantages and disadvantages of bearing materials. **Introduction to Surface engineering:** Concept and scope of surface engineering.

Surface modification – transformation hardening, surface melting, thermo chemical processes.

Surface Coating – plating, fusion processes, vapour phase processes.

Selection of coating for wear and corrosion resistance.

#### **Course outcomes:**

- 1. Understand the fundamentals of tribology and associated parameters.
- 2. Apply concepts of tribology for the performance analysis and design of components experiencing relative motion.
- 3. Analyse the requirements and design hydrodynamic journal and plane slider bearings for a given application.
- 4. Select proper bearing materials and lubricants for a given tribological application.
- 5. Apply the principles of surface engineering for different applications of tribology.

# FINANCIAL MANAGEMENT B.E, VII Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME743                 | CIE Marks  | 40 |
|-------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week  | 03                      | SEE Marks  | 60 |
| Total Number of Lecture Hours | 40( 8 Hours per Module) | Exam Hours | 03 |
| Credits –03                   |                         |            |    |

**Subject Overview:** Finance is the lifeblood of any enterprise. Financial Management is imperative for efficient utilization and generation of monetary resources and funds. The subject deals with fundamental books and records of accounts with financial analysis. The subject imparts expose to statutory levies to strengthen the understanding of government taxed and duties including the general sales tax structure. The subject includes concepts of market risks and returns to efficiently manage the cash and circumvent liquidity problems both at the individual and organizational levels. In the new CBCS scheme, topics on investment decisions and asset management decisions besides the financing decisions. The curriculum also includes costing and budgeting to enable budding engineers to make a comparative study of finance and economics and evaluate costs and revenues of engineering operations.

Module - 1

**INTRODUCTION:** Book keeping – systems of book keeping, journal and ledger posting. Financial Statement, Preparation of Trial balance, profit and Loss Account, Balance Sheet with adjustments.

**STATUTORY LEVIES:** Forms of organization, direct and indirect taxes. Statutory Registration- excise Duty, central sales tax, VAT, service tax, central and state general Sales tax, international fund availability.

Module - 2

**WORKING CAPITAL MANAGEMENT:** Definition, need and factors influencing the working capital requirement. Determination of operating cycle, cash cycle and operating cycle analysis. Calculation of gross working capital and net working capital requirement.

**LONG TERM FINANCING:** Raising of finance from primary and secondary markets. Valuation of securities, features of convertible securities and warrants. Features of debt, types of debt instruments, return on investment(ROI) and credit rating of units. Shares, debentures.

Module - 3

**INVESTMENT DECISIONS:**Inventory investment, Strategic investment, Ownership investments, lending investment, cash equivalent investment, factors affecting investment decisions, Capital Budgeting, disinvestment methods - public offer, sale of equity, cross holding

**ASSET MANAGEMENT DECISIONS :** Current Asset Management , Fixed Asset Management, Wealth management , engineering asset management (EAM) - asset maintenance technologies, asset reliability management, project management

**RISK AND REQUIRED RETURN:** Risk and return relationship, methods of measuring the risk, Business risk, financial risk, calculation of expected rate of return to the portfolio, financial theories - portfolio theory, capital asset pricing model, arbitage pricing theorynumerical problems.

**RATIO ANALYSIS / ACCOUNTING RATIO:** Liquidity ratio – Current ratio, quick ratio, turnover ratio, capital structure ratio- Debt – equity ratio, Coverage ratio, Profitability ratio, Profit margin, Return on assets, Activity ratios – Inventory turnover ratio, Debtors Turnover ratio. Preparation of the balance sheet from various ratios. Analysis of any one published balanced sheet.

Module - 5

**COSTING:** Classification of costs, preparation of cost sheet, absorption and variable costing, standard costing, job costing, process costing. Classification of the variances analysis – material, labor and overhead variances.

**BUDGETING:** Types of budgets – Flexible budgets, preparation of cash budgets, purchase and production budgets and master budget, Budgetary control, advantages & limitations of budgeting.

**Course outcomes:** 

- 1. Measure the returns from engineering projects of differing risks and present a risk-return tradeoff relationship (PO 4, 12)
- 2. Determine the financial ratios and profitability margins of projects to evaluate economic viability to accept or reject the project. (PO 11)
- 3. Evaluate cost break ups of engineering projects and processes to determine and control the prohibitive cost components (PO 11)
- 4. Apply a Engineering Asset Management techniques to evaluate the economic value of physical assets. (PO 1, 11, 12)

## **TEXT BOOKS:**

# Design for Manufacturing B.E, VII Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]

| Course Code                   | 17ME744                 | CIE Marks  | 40 |
|-------------------------------|-------------------------|------------|----|
| Number of Lecture Hours/Week  | 03                      | SEE Marks  | 60 |
| Total Number of Lecture Hours | 40( 8 Hours per Module) | Exam Hours | 03 |
| Credits –03                   |                         |            |    |

**Course Objective:** 

- To educate students on factors to be considered in designing parts and components with focus on manufacturability.
- To expose the students to dimensional tolerances, geometric tolerances and true position tolerance techniques in manufacture.
- To impart the knowledge on design considerations for designing components produced using various machining operations like turning, drilling, milling, grinding etc.
- To educate the students on design rules and recommendations for processes like casting, welding, forgings powder metallurgy and injection moulding.

Module - 1

Major phases of design, effect of material properties on design, effect of manufacturing processes on design. Material selection process- cost per unit property, weighted properties and limits on properties methods. Guidelines for design for manufacturability.

Review of relationship between attainable tolerance grades and different machining processes. Processcapability, mean, variance, skewness, kurtosis, process capability indices-C<sub>p</sub>, and C<sub>pk</sub>.

Cumulative effect of tolerance- Sure fit law and truncated normal law, problems.

Module - 2

Selective Assembly: Interchangeable part manufacture and selective assembly. Deciding the number of groups -model-1: group tolerance of mating parts equal, model- 2: total and group tolerances of shaft equal. Control of axial play- introducing secondary machining operations, and laminated shims; examples.

True positional theory: Comparison between coordinate and true position method offeature location. True position tolerance- virtual size concept, floating and fixed fasteners, projected tolerance zone and functional gages. Concept of Zero true position tolerance. Simple problems on true position tolerancing.

Module - 3

**Datum Features:** Functional datum, datum for manufacturing, changing the datum; examples.

**Component Design:**Design features to facilitate machining: drills, milling cutters, keyways, Doweling procedures, counter sunk screws, Reduction of machined area, simplification by separation, simplification by amalgamation, Design for machinability, Design for economy, Design for clampability, Design for accessibility. Design for assembly

|  | Module - 4   |
|--|--|
| Design   | of components with casting considerations: Pattern, mould, and parting line. Cored holes and machined holes. Identifying the possibleand probable  |
| parting  | lines. Castings requiring special sand cores. Designing to obviatesand cores.  |
| Weldin   | g considerations: requirements and rules, redesign of components for welding; case studies.  |
|  | Module - 5   |
| Forging  | considerations -requirements and rules-redesign of components for forging and case studies.  |
| Design   | of components for powder metallurgy- requirements and rules-case studies.  |
| Design   | of components for injection moulding- requirements and rules-case studies.   |
| Course   | outcomes:  |
| 1.   | Describe the different types of manufacturing systems and comparetheir suitability foreconomic production of various components and products   |
|  | dentify factors and causing mechanisms of the defects likely to occur with different manufacturing processes in producing mechanical products  |
|  | and the relevant decign approaches to rectify them   |
|  | and the relevant design approaches to rectify them.  |
| 3.   | Select proper materials and manufacturing processes for designing products/components by applying the relevant principles for ease and   |

| Total Number of Lecture Hours | 40( 8 Hours per Module) | Exam Hours | 03 |
| Credits –03                   |                         |            |    |

**Course Objective:** 

- 1. Basics of electronic control of internal combustion engines and the drives
- 2. Understand principle of working of sensors and actuators used in automobiles for control
- 3. Diagnostics and safety systems in automobiles

#### Module - 1

Automotive Fundamentals Overview - Evolution of Automotive Electronics,

Automobile Physical Configuration, Survey of Major Automotive Systems, The Engine – Engine Block, Cylinder Head, Four Stroke Cycle, Engine Control,

Ignition System - Spark plug, High voltage circuit and distribution, Spark pulse generation, Ignition Timing, Diesel Engine, Drive Train - Transmission,

Drive Shaft, Differential, Suspension, Brakes, Steering System\, Starter Battery –Operating principle:

**The Basics of Electronic Engine Control** – Motivation for Electronic EngineControl – Exhaust Emissions, Fuel Economy, Concept of an Electronic Engine control system, Definition of General terms, Definition of Engine performance terms, Engine mapping, Effect of Air/Fuel ratio, spark timing and EGR on performance, Control Strategy, Electronic Fuel control system,

Analysis of intake manifold pressure, Electronic Ignition.

Module - 2

**Control Systems -** Automotive Control System applications of Sensors and Actuators – Typical Electronic Engine Control System, Variables to be measured

Automotive Sensors - Airflow rate sensor, Strain Gauge MAP sensor, Engine

Crankshaft Angular Position Sensor, Magnetic Reluctance Position Sensor, Hall effect Position Sensor, Shielded Field Sensor, Optical Crankshaft Position Sensor, Throttle Angle Sensor (TAS), Engine Coolant Temperature (ECT) Sensor, Exhaust Gas Oxygen (O2/EGO) Lambda Sensors, PiezoelectricKnock Sensor. Automotive Actuators– Solenoid, Fuel Injector, EGR Actuator, Ignition.

|  | Module - 3   |
|--|--|
| •  | Vibration Absorbers: Introduction, Parallel Damped Vibration Absorber, Analysis, Gyroscopic Vibration absorbers, analysis &  |
|  | experimental set up and observations, Active Vibration absorbers. Control of Structures: Introduction, Structures as control plants  |
|  | Modelling structures for control, Control strategies and Limitations.  |
| •  | Biomimetics: Characteristics of Natural structures. Fibre reinforced: organic matrix natural composites, Natural creamers, Mollusks Biomimetic sensing, Challenges and oppurtunities.  |
|  | Module - 4   |
| ٠  | MEMS:History of MEMS, Intrinsic Characteristics, Devices: Sensors and Actuators. Microfabrication: Photolithography, Thermal   |
|  | oxidation, Thin film deposition, etching types, Doping, Dicing, Bonding. Microelectronics fabrication process flow, Silicon based,   |
| _  | Process selection and design.  |
| •  | Piezoelectric Sensing and Actuation: Introduction, Cantilever Piezoelectric actuator model, Properties of Piezoelectric materials<br>Applications. Magnetic Actuation: Concepts and Principles, Magnetization and Nomenclatures, Fabrication and case studies, Comparison  |
|  | of major sensing and actuation methods.  |
|  | Module - 5   |
| Autor  | notive Diagnostics–Timing Light, Engine Analyzer, On-boarddiagnostics, Off-board diagnostics, Expert Systems, Occupant Protection  |

**Course outcomes:** 

- Develop basic fundamental understanding of the effects of cracklike defects on the performance of aerospace, civil, and mechanicalEngineering structures.
- Learn to select appropriate materials for engineering structures to insure damage tolerance.
- Learn to employ modern numerical methods to determine critical crack sizes and fatigue crack propagation rates in engineering structures.
- Gain an appreciation of the status of academic research in field of fracture mechanics.

**Course outcomes:** 

- On completion of this subject, students will be able to:
- 1. Illustrate various components of Mechatronics systems.
- 2. Assess various control systems used in automation.
- 3. Develop mechanical, hydraulic, pneumatic and electrical control systems.

**Course outcomes:** 

On completion of this subject, students will be able to:

- 1. Understand and characterize the single and multi degrees of freedom systems subjected to free and forced vibrations with and without damping.
- 2. Understand the method of vibration measurements and its controlling.
- 3. Understand the concept of dynamic vibrations of a continuous systems.

4. To measure strain in various machine elements using strain gauges.

- 5. To determine the minimum film thickness, load carrying capacity, frictional torque and pressure distribution of journal bearing.
- 6. To determine strain induced in a structural member using the principle of photo-elasticity.

#### **Course Objectives:**

| CLO1 | To expose the students to the techniques of CNC programming and cutting tool path generation through CNC simulation software by using G-Codes and M-codes |
|------|---|
| CLO2 | To educate the students on the usage of CAM packages and cut part on virtual CNC machine simulator.   |
| CLO3 | To make the students understand the importance of automation in industries through exposure to FMS, Robotics, and Hydraulics and Pneumatics.              |

<u>Part-A</u>

**Manual CNC part programming** for 2 turning and 2 milling parts. Selection and assignment oftools, correction of syntax and logical errors, and verification of tool path.

**CNC part programming using CAM packages**. Simulation of Turning, Drilling, Millingoperations. 3 typical simulations to be carried out using simulation packages like: **CademCAMLab-Pro,Master- CAM.** 

Program generation using software. Optimize spindle power, torque utilization, and cycle time. Generation and printing of shop documents like process and cycle time sheets, tool list, and tool layouts. Enter program, take tool offsets, cut part in single block and auto mode, measure the virtual part on screen in the virtual CNC machine simulator, for standard CNC control systems FANUC, FAGOR, HAAS and SINUMERIK.

#### Part B

(Only for Demo/Viva voce)

**FMS (Flexible Manufacturing System)**: Programming of Automatic storage and Retrievalsystem (ASRS) and linear shuttle conveyor Interfacing CNC lathe, milling with loading unloading arm and ASRS to be carried out on simple components.

## (Only for Demo/Viva voce)

Robot programming: Using Teach Pendent & Offline programming to perform pick and place, stacking of objects (2 programs).

Pneumatics and Hydraulics, Electro-Pneumatics: 3 typical experiments on Basics of thesetopics to be conducted.

## **Course Outcomes:**

After studying this course, students will be able to:

| Generate CNC Lathe part program for Turning, Facing, Chamfering, Grooving, Step turning, Taper turning, Circular interpolation   |
|--|
| etc.   |
| Generate CNC Mill Part programming for Point to point motions, Line motions, Circular interpolation, Contour motion, Pocket milling- circular, rectangular, Mirror commands etc. |
| Use Canned Cycles for Drilling, Peck drilling, Boring, Tapping, Turning, Facing, Taper turning Thread cutting etc.   |
| Simulate Tool Path for different Machining operations of small components using CNC Lathe & CNC Milling Machine.   |
| Use high end CAM packages for machining complex parts; use state of art cutting tools and related cutting parameters; optimize cycle time; set up and cut part on.               |
| Understand & write programs for Robot control; understand the operating principles of hydraulics, pneumatics and electro pneumatic systems.                                      |
|  |

#### Scheme for Examination:

Two Questions from Part A - 60 Marks (30 + 30)

Viva-Voce - 20 Marks

Total: 80 Marks

## **Project Work, Phase I**

| Course                | Coue    | Creans  | L-I-F | SEE   | CIA   | Exam Duration |
| Project Work, Phase I | 17MEP78 | 2       | 0-0-3 |       | 100   | -             |

#### **OPERATIONS RESEARCH B.E. VIII Semester, Mechanical Engineering** [As per Choice Based Credit System (CBCS) scheme] **Course Code** 17ME81 **CIE Marks** 40 Number of Lecture Hours/Week 04 SEE Marks 60 **Total Number of Lecture Hours** 50(10 Hours per Module) **Exam Hours** 03 Credits – 04 **Course Objectives:** 1. To enable the students to understand the scientific methods of providing various departments of an organization with a quantitative basis of decision making. 2. To enable the studentsto understand the importance of various tools and techniques in finding optimal solutions to problems involving limited resources in the form of Men, Materials and machinery. Module - 1 Introduction: Evolution of OR, Definitions of OR, Scope of OR, Applications of OR, Phases in OR study. Characteristics and limitations of OR, models used in OR, Linear Programming Problem (LPP), Generalized LPP- Formulation of problems as L.P.P. SolutionstoLPP by graphical method(Two Variables). Module - 2 LPP: Simplex method, Canonical and Standard form of LP problem, slack, surplus and artificial variables, Solutions to LPP by Simplex method, Big-M Method and Two Phase Simplex Method, Degeneracy in LPP. Concept of Duality, writing Dual of given LPP. Solutions to L.P.P by Dual Simplex Method. Module - 3 Transportation Problem: Formulation of transportation problem, types, initial basic feasible solution using North-West Corner rule, Vogel's Approximation method. Optimality in Transportation problem by Modified Distribution(MODI) method. Unbalanced T.P. Maximization T.P. Degeneracy in transportation problems, application of transportation problem. Module - 4 Network analysis: Introduction, Construction of networks, Fulkerson's rule for numbering the nodes, AON and AOA diagrams; Critical path method to find the expected completion time of a project, determination of floats in networks, PERT networks, determining the probability of completing a project, predicting the completion time of project; Cost analysis in networks. Crashingofnetworks- Problems. Queuing Theory: Queuing systems and their characteristics, Pure-birth and Pure-death models (only equations), Kendall & Lee's notation of Queuing, empirical queuing models – Numerical on M/M/1 and M/M/C Queuing models. Module - 5 Game Theory: Definition, Pure Strategy problems, Saddle point, Max-Min and Min-Max criteria, Principle of Dominance, Solution of games with Saddle point. Mixed Strategy problems. Solution of 2X2 games by Arithmetic method, Solution of 2Xn m and mX2 games by graphical method. Formulation of games.

**Sequencing:** Basic assumptions, Johnson's algorithm, sequencing 'n' jobs on single machine using priority rules, sequencing using Johnson's rule-'n' jobs on 2 machines, 'n' jobs on 3 machines, 'n' jobs on 'm' machines. Sequencing of 2 jobs on 'm' machines using graphical method.

#### **Course outcomes:**

- 1. Understand the meaning, definitions, scope, need, phases and techniques of operations research.
- 2. Formulate as L.P.P and derive optimal solutions to linear programming problems by graphical method, Simplex method, Big-M method and Dual Simplex method.
- **3.** Formulate as Transportation and Assignment problems and derive optimum solutions for transportation, Assignment and travelling salesman problems.
- 4. Solve problems on game theory for pure and mixed strategy under competitive environment.
- 5. Solve waiting line problems for M/M/1 and M/M/K queuing models.
- 6. Construct networkdiagrams and determine critical path, floats for deterministic and PERT networks including crashing of Networks.
- 7. Determine minimum processing times for sequencing of n jobs-2 machines, n jobs-3machines, n jobs-m machines algorithm.

#### **TEXT BOOKS:**

- 1. Operations Research, P K Gupta and D S Hira, S. Chand and Company LTD. Publications, New Delhi 2007
- 2. Operations Research, An Introduction, Seventh Edition, Hamdy A. Taha, PHI Private Limited, 2006.
- 3. Introduction to Operations Research, Lieberman/Nag/Basu, 9<sup>th</sup> Edition, McGraw Hill Education Pvt.Ltd.,

- 1. Operations Research, Theory and Applications, Sixth Edition, J K Sharma, Trinity Press, Laxmi Publications Pvt.Ltd. 2016.
- 2. Operations Research, Paneerselvan, PHI
- 3. Operations Research, A M Natarajan, P Balasubramani, Pearson Education, 2005
- 4. Introduction to Operations Research, Hillier and Lieberman,8<sup>th</sup>Ed., McGraw Hill

| Characterization Techniques: Particle  | e Size & Shape Distribution, Electron Mi   | croscopy of Powder, Interparticle Fr  | icuon, Compression admity, Powd      |

Structure, Chemical Characterization Microstructure Control in Powder: Importance of Microstructure Study, Microstructures of Powder by Different techniques.

Powder Shaping: Particle Packing Modifications, Lubricants & Binders, Powder Compaction & Process Variables, Pressure & Density Distribution during Compaction, Isotactic Pressing, Injection Moulding, Powder Extrusion, Slip Casting, Tape Casting.
 Sintering: Theory of Sintering, Sintering of Single & Mixed Phase Powder, Liquid Phase Sintering Modern Sintering Techniques, Physical & Mechanical Properties Evaluation, Structure-Property Correlation Study, Modern Sintering techniques, Defects Analysis of Sintered Components
 Application of Powder Metallurgy: Filters, Tungsten Filaments, Self-Lubricating Bearings, Porous Materials, Biomaterials etc.

#### Module - 4

#### NANO MATERIALS & CHARACTERIZATION TECHNIQUES:

**Introduction:** Importance of Nano-technology, Emergence of Nanotechnology, Bottom-up and Top-down approaches, challenges in Nanotechnology **Nano-materials Synthesis and Processing:** Methods for creating Nanostructures; Processes for producing ultrafine powders- Mechanical grinding; Wet Chemical Synthesis of Nano-materials- sol-gel process; Gas Phase synthesis of Nano-materials- Furnace, Flame assisted ultrasonic spray pyrolysis; Gas Condensation Processing (GPC), Chemical Vapour Condensation(CVC).

**Optical Microscopy -** principles, Imaging Modes, Applications, Limitations.

Scanning Electron Microscopy (SEM) - principles, Imaging Modes, Applications, Limitations. Transmission Electron Microscopy (TEM) - principles, Imaging Modes, Applications, Limitations.X- Ray Diffraction (XRD) - principles, Imaging Modes, Applications, Limitations.Scanning Probe Microscopy (SPM) - principles, Imaging Modes, Applications, Limitations.Atomic Force Microscopy (AFM) - basic principles, instrumentation, operational modes, Applications, Limitations. Electron Probe Micro Analyzer (EPMA) - Introduction, Sample preparation, Working procedure, Applications, Limitations.

#### Module - 5

## MANUFACTURING CONTROL AND AUTOMATION

**CNC technology - An overview:** Introduction to NC/CNC/DNC machine tools, Classification of NC /CNC machine tools, Advantage, disadvantages of NC /CNC machine tools, Application of NC/CNC **Part programming:** CNC programming and introduction, Manual part programming: Basic (Drilling, milling, turning etc.), Special part programming, Advanced part programming, Computer aided part programming (APT)

Introduction: Automation in production system principles and strategies of automation, basic Elements of an automated system. Advanced Automation functions. Levels of Automations, introduction to automation productivity

**Control Technologies in Automation:** Industrial control system. Process industry vs discrete manufacturing industries. Continuous vs discrete control. Continuous process and its forms. Other control system components.

#### **Course outcomes:**

- 1. Understand the different process of Additive Manufacturing. using Polymer, Powder and Nano materials manufacturing.
- 2. Analyse the different characterization techniques.
- 3. Describe the various NC, CNC machine programing and Automation techniques.

## **TEXT BOOKS:**

- 1. Chua Chee Kai, Leong Kah Fai, "Rapid Prototyping: Principles & Applications", World Scientific, 2003.
- 2. G Odian Principles of Polymerization, Wiley Interscience John Wiley and Sons, 4th edition, 2005
- 3. Mark James Jackson, Microfabrication and Nanomanufacturing, CRC Press, 2005.
- 4. Powder Metallurgy Technology, Cambridge International Science Publishing, 2002.
- 5. P. C. Angelo and R. Subramanian: Powder Metallurgy- Science, Technology and Applications, PHI, New Delhi, 2008.
- 6. Mikell P Groover, Automation, Production Systems and Computer Integrated Manufacturing, 3rd Edition, Prentice Hall Inc., New Delhi, 2007.

## Module - 5

**Brittle Coatings:** Coatings stresses, Crack patterns, Refrigeration techniques, Load relaxation techniques, Crack detection methods, Types of brittle coatings and its applications.

**Moire Methods:** Moire fringes produced by mechanical interference.Geometrical approach, Displacement field approach to Moire fringe analysis, Out of plane displacement measurements, Out of plane slope measurements.Applications and advantages

#### **Course outcomes:**

- 1. Explain and the elastic behavior of solid bodies.
- 2. Describe stress strain analysis of mechanical systems using electrical resistance strain gauges.
- 3. Understand the experimental methods of determining stresses and strains induced.
- 4. Apply the coating techniques to determine the stresses and strains.

#### **TEXT BOOKS:**

- 1. "Experimental Stress Analysis", Dally and Riley, McGraw Hill.
- 2. "Experimental Stress Analysis". Sadhu Singh, Khanna publisher.

- 1. Experimental stress Analysis, Srinath L.S tata Mc Graw Hill.
- 2. "PhotoelasticityVol I and Vol II, M.M.Frocht, John Wiley & sons.
- 3. "Photo Elastic Stress Analysis", Kuske, Albrecht & Robertson John Wiley & Sons.
- 4. Motion Measurement and Stress Analysis Dave and Adams
- 5. Holman, "Experimental Methods for Engineers" Tata McGraw Hill Companies, 7th Edition, New York, 2007

**Green Manufacturing Through Clean Energy Supply** Introduction, Clean Energy Technologies, Application Potential of Clean Energy Supplying Green Manufacturing

Module - 5

Packaging and the Supply Chain: A Look at Transportation

Introduction, Background, Recommended Method to Determine Opportunities for Improved Pallet Utilization, Discussion.

**Enabling Technologies for Assuring Green Manufacturing** 

Motivation, Process Monitoring System, Applying Sensor Flows in Decision Making: Automated Monitoring, Case Study.

**Concluding Remarks and Observations about the Future** 

Introduction, Evolution of Manufacturing, Leveraging Manufacturing, Energy of Labor.

Course outcomes:

- Understand the basic design concepts, methods, tools, the key technologies and the operation of sustainable green manufacturing.
- Apply the principles, techniques and methods to customize the learned generic concepts to meet the needs of a particular industry/enterprise.
- Identify the strategies for the purpose of satisfying a set of given sustainable green manufacturing requirements.
- Design the rules and processes to meet the market need and the green manufacturing requirements by selecting and evaluating suitable technical, managerial / project management and supply chain management scheme.

#### Module - 5

## PRODUCT BUILDING AND STRUCTURES

Virtual product development tools for components, machines, and manufacturing plants: 3D CAD systems, digital mock-up, model building, model analysis, production (process) planning, and product data technology, Product structures: Variant management, product configuration, material master data, product description data, Data models, Life cycles of individual items, status of items.

#### **Scheme of Examination:**

Two question to be set from each module. Students have to answer five full questions, choosing at least one full question from each module. Motivation, Process Monitoring System, Applying Sensor Flows in Decision Making:Automated Monitoring, Case Study.

#### **Concluding Remarks and Observations about the Future**

Introduction, Evolution of Manufacturing, Leveraging Manufacturing, Energy of Labor.

#### **Course outcomes:**

- Explain the various strategies of PLM and Product Data Management
- Describe decomposition of product design and model simulation
- Apply the concept of New Product Development and its structuring.
- Analyze the technological forecasting and the tools in the innovation.
- Apply the virtual product development and model analysis
